Evidence-Based Practices for Strategic and Tactical Firefighting is a synopsis of the UL/NIST research studies and experiments on fire behavior and techniques for ventilation, fire suppression, and search and rescue as a result of the changes in modern building construction and furnishing materials. As a result of these changes, today's fires release energy faster, reach flashover potential sooner, may reach higher temperatures, and are much more likely to become ventilation-limited than building fires of even a few years ago. Developed in partnership with the International Association of Fire Chiefs (IAFC) and National Fire Protection Association (NFPA), Evidence-Based Practices for Strategic and Tactical Firefighting details many of the findings discovered as the result of an ongoing series of experiments conducted by NIST, UL, and the New York City Fire Department (FDNY) and provides the most up-to-date information available today for Fire Fighter, Fire Officer, and Fire Science students. Additional information about these –and other fire experiments can be obtained online at the NIST website by searching under Fire – Fighting Technology and at the UL website by searching under Fire – Fighter Safety Research Institute.

Within the last few years, iron research has yielded exciting new insights into the understanding of normal iron homeostasis. Such development, and the evolution of improved strategies of Iron Chelating Therapy require better understanding of the pathophysiology of iron toxicity and the mechanism of action of iron chelating drugs. The timeliness of the present volume is underlined by several significant developments in recent years. New insights have been gained into the molecular basis of aberrant iron handling in hereditary disorders and the pathophysiology of iron overload. This volume highlights the impact of long term Iron Chelating Therapy using deferoxamine or the new, but controversial oral iron chelator deferiprone based on experience gained by multicenter trials, with special emphasis on survival, morbidity and drug toxicity; it reviews the development of the new and improved orally effective chelators suitable for clinical use in the near future and examines novel strategies of iron chelating treatment for the control of cell proliferation in malignant disease or malaria.

• New York Times bestseller • The 100 most substantive solutions to reverse global warming, based on meticulous research by leading scientists and policymakers around the world "At this point in time, the Drawdown book is exactly what is needed; a credible, conservative solution-by-solution narrative that we can do it. Reading it is an effective inoculation against the widespread perception of doom that humanity cannot and will not solve the climate crisis. Reported by-effects include increased determination and a sense of grounded hope." —Per Espen Stoknes, Author, What We Think About When We Try Not To Think

About Global Warming “There’s been no real way for ordinary people to get an understanding of what they can do and what impact it can have. There remains no single, comprehensive, reliable compendium of carbon-reduction solutions across sectors. At least until now. . . . The public is hungry for this kind of practical wisdom.” —David Roberts, Vox “This is the ideal environmental sciences textbook—only it is too interesting and inspiring to be called a textbook.” —Peter Kareiva, Director of the Institute of the Environment and Sustainability, UCLA In the face of widespread fear and apathy, an international coalition of researchers, professionals, and scientists have come together to offer a set of realistic and bold solutions to climate change. One hundred techniques and practices are described here—some are well known; some you may have never heard of. They range from clean energy to educating girls in lower-income countries to land use practices that pull carbon out of the air. The solutions exist, are economically viable, and communities throughout the world are currently enacting them with skill and determination. If deployed collectively on a global scale over the next thirty years, they represent a credible path forward, not just to slow the earth’s warming but to reach drawdown, that point in time when greenhouse gases in the atmosphere peak and begin to decline. These measures promise cascading benefits to human health, security, prosperity, and well-being—giving us every reason to see this planetary crisis as an opportunity to create a just and livable world.

The Rapid Visual Screening (RVS) handbook can be used by trained personnel to identify, inventory, and screen buildings that are potentially seismically vulnerable. The RVS procedure comprises a method and several forms that help users to quickly identify, inventory, and score buildings according to their risk of collapse if hit by major earthquakes. The RVS handbook describes how to identify the structural type and key weakness characteristics, how to complete the screening forms, and how to manage a successful RVS program.

The Body in the Woods Jones & Bartlett Publishers

The Third Edition provides a comprehensive introduction to trench rescue, focusing on the knowledge and skills required to effectively perform rescues in a variety of trench environments.

Fundamentals of Technical Rescue PMPH-USA

Based on Fields medal winning work of Michael Freedman, this book explores the disc embedding theorem for 4-dimensional manifolds. This theorem underpins virtually all our understanding of topological 4-manifolds. Most famously, this includes the 4-dimensional Poincaré conjecture in the topological category. The Disc Embedding Theorem contains the first thorough and approachable exposition of Freedman's proof of the disc embedding theorem, with many new details. A self-contained account of decomposition space theory, a beautiful but outmoded branch of topology that produces non-differentiable homeomorphisms between manifolds, is provided, as well as a stand-alone interlude that explains the disc embedding theorem's key role in all known homeomorphism classifications of 4-manifolds via surgery theory and the s-cobordism theorem.

Additionally, the ramifications of the disc embedding theorem within the study of topological 4-manifolds, for example Frank Quinn's development of fundamental tools like transversality are broadly described. The book is written for mathematicians, within the subfield of topology, specifically interested in the study of 4-dimensional spaces, and includes numerous professionally rendered figures.

The Complete Fire Officer III and IV Training Solution! Chief officers need to know how to make the transition from company officer to chief officer. *Chief Officer: Principles and Practice* is designed to help make the transition from company officer to chief officer a smooth evolution. Covering the entire scope of Levels III and IV from the 2009 Edition of NFPA 1021, Standard for Fire Officer Professional Qualifications, *Chief Officer* combines current content with dynamic features and interactive technology to better support instructors and to help prepare future chief officers to become problem-solving leaders for their organizations. *Chief Officer: Principles and Practice* has a clear focus on instilling fire fighter safety throughout an organization's culture. Reducing fire fighter injuries and deaths requires the dedicated efforts of every fire fighter, fire officer, and fire department. The entire fire community must work together to achieve one common goal: to ensure that everyone goes home. Chief officers therefore set the tone for safety in their organization, and this textbook embraces that philosophy. It is with this goal in mind that the 16 Firefighter Life Safety Initiatives, developed by the National Fallen Firefighters Foundation, are integrated throughout the text. The features in this textbook will help students take that extra step toward becoming outstanding chief officers. These features include: • Scenario-Based Learning. *You Are the Chief Officer* and *Chief Officer in Action* are found in each chapter to encourage and foster critical thinking skills. • Practical Tips for the Chief Officer. *Chief Officer Tips and Voices of Experience* essays are integrated into each chapter to provide helpful advice from experienced chief officers. • Level IV Job Performance Requirements. *Fire Officer Level IV* content is highlighted to discern Level III JPRs from Level IV. • Walk the Talk. Additional activities encourage students to take what they have learned in the chapter and apply it to their own department. *Map Reading and Land Navigation* Jones & Bartlett Publishers
