(traditional and alternative); entrepreneurship education and training programmes; a comparative European analysis of entrepreneurship programmes; a profile of the aspiring entrepreneur; assessing effectiveness; and a framework for the design and development of entrepreneurship training programmes. Readers should gain a significant insight into the effectiveness of entrepreneurship training programmes from both the programme providers' and participants' point of view. Key features of the book include: an up-to-date review of the literature in this field; a comparative analysis of entrepreneurship programmes with a European perspective; an in-depth treatment of the effectiveness issue both on a qualitative and quantitative basis, and a longitudinal study involving a control and comparator group. The framework proposed by the authors should be applicable on a European scale.

Students often think of science as disconnected pieces of information rather than a narrative that challenges their thinking, requires them to develop evidence-based explanations for the phenomena under investigation, and communicate their ideas in discipline-specific language as to why certain solutions to a problem work. The author provides teachers in primary and junior secondary school with different evidence-based strategies they can use to teach inquiry science in their classrooms. The research and theoretical perspectives that underpin the strategies are discussed as are examples of how different ones are implemented in science classrooms to affect student engagement and learning. Key Features: Presents processes involved in teaching inquiry-based science Discusses importance of multi-modal representations in teaching inquiry based-science Covers ways to

develop scientifically literacy Uses the Structure of Observed learning Outcomes (SOLO) Taxonomy to assess student reasoning, problem-solving and learning Presents ways to promote scientific discourse, including teacher-student interactions, student-student interactions, and meta-cognitive thinking

This popular pocketbook has been fully updated with additional quick reference emergency information. It provides the new (and possibly the not so new) veterinary graduate with a handy guide to the important drugs, tests and procedures most commonly encountered in small animal practice. It pulls together information from the BSAVA Small Animal Formulary, BSAVA manuals and other sources, and is intended to be a 'quick glance' reference that can be carried in a scrub top pocket for ease of use when consulting or during ward rounds. Notes pages are provided throughout.

"Divided into three sections, the text examines research with a focus on application to school-age students, and then analyzes the language difficulties associated with specific disability types. The third section focuses on contemporary assessment and instructional strategies. Kuder emphasizes research-based instructional techniques and discusses several new methods, including technology-based approaches."--BOOK JACKET.

Principles of Classroom Management, Third Canadian Edition is designed to help you improve the teacher-student relationship in order to foster positive student behaviour and academic success. Instead of labelling students as problematic, the authors emphasize the situation, placing the onus on teachers to modify either their behaviour or the situation. The other pillar of Principles of Classroom Management is its up-to-date Canadian content. It reflects Canadian values through its references to current Canadian research, discussion of changes in Canadian schools, and coverage of best practices across the country. The case studies have also been revisited to ensure they reflect real, current issues in Canadian schools.

On Reading Books to Children: Parents and Teachers brings together in one volume current research on adult book reading to children. The authors, drawn from around the world, are key researchers and eminent scholars from the fields of reading and literacy, child language, speech pathology, and psychology, representing multiple perspectives within these disciplines. Chapters on the effects and limitations of book sharing are integrated with chapters discussing promising programs on storybook research. The reality of reading to children is more complex than it appears on the surface. The authors discuss some effects of and suggestions for reading to children that have emerged from the research. The ideas set forth in this volume will stimulate new lines of research on the effects of storybook reading, as well as refinements of current methods, yielding findings that enrich our understanding of this important arena of literacy development.

In the years since that report was published, we have learned more about development in place-from research, from working with managers and organizations that are making use of developmental assignments, and from our colleagues in the field. We believe it is time once again to consolidate our knowledge into one tool to help leaders add developmental assignments to their own jobs and help others do the same. The tables inside this book are full of assignments. You'll also find cross-references to CCL's assessment tools: 360 BY DESIGN®, Executive Dimensions®, Benchmarks®, Prospector®, and SKILLS.

With at least 40% new or updated content since the last edition, Clinical Decision Support, 2nd Edition explores the crucial new motivating factors poised to accelerate Clinical Decision Support (CDS) adoption. This book is mostly focused on the US perspective because of initiatives driving EHR adoption, the articulation of 'meaningful use', and new policy attention in process including the Office of the National Coordinator for Health Information Technology (ONC) and the Center for Medicare and Medicaid Services (CMS). A few chapters focus on the broader international perspective. Clinical Decision Support, 2nd Edition explores the technology, sources of knowledge, evolution of successful forms of CDS, and organizational and policy perspectives surrounding CDS. Exploring a roadmap for CDS, with all its efficacy benefits including reduced errors, improved quality, and cost savings, as well as the still substantial roadblocks needed to be overcome by policy-makers, clinicians, and clinical informatics

Though there has been much discussion on the academic aspects of Japanese education abroad (e.g., high scores on international tests, lesson study), there has been little information on the non-academic aspects of Japanese schooling. This non-academic aspect is called Tokkatsu (tokubetsu katsudo). Unlike math and reading, Tokkatsu is not confined to a certain period, but extends throughout the school day and even after-school activities — such as school excursions. It includes classroom activities such as classroom discussions, morning and afternoon meetings that take place daily, cleaning and serving lunch, school events such as sports day, school excursions, student councils, and club activities. Such activities occur every single day, throughout one's school years, from elementary school (actually, even kindergarten) to high school. They are, however, bound together by the common goals of the Tokkatsu framework. This book is the foremost attempt to address a gap in English literature on Tokkatsu.

This brilliant and revolutionary theory of multiple intelligences reexamines the goals of education to support a more educated society for future generations. Howard Gardner's concept of multiple intelligences has been hailed as perhaps the most profound insight into education since the work of Jerome Bruner, Jean Piaget, and even John Dewey. Here, in *The Disciplined Mind*, Garner pulls together the threads of his previous works and looks beyond such issues as charters, vouchers, unions, and affirmative action in order to explore the larger questions of what constitutes an educated person and how this can be achieved for all students. Gardner eloquently argues that the purpose of K-12 education should be to enhance students' deep understanding of the truth (and falsity), beauty (and ugliness), and goodness (and evil) as defined by their various cultures. By exploring the theory of evolution, the music of Mozart, and the lessons of the Holocaust as a set of examples that illuminates the nature of truth, beauty, and morality, *The Disciplined Mind* envisions how younger generations will rise to the challenges of the future—while preserving the traditional goals of a “humane” education. Gardner's ultimate goal is the creation of an educated generation that understands the physical, biological, and societal world in their own personal context as well as in a broader world view. But even as Gardner persuasively argues the merits of his approach, he recognizes the difficulty of developing one universal, ideal form of education. In an effort to reconcile conflicting educational viewpoints, he proposes the creation of six different educational pathways that, when taken together, can satisfy people's concern for student learning and their widely divergent views about knowledge and understanding overall.

[Program Evaluation in Language Education](#) Simon and Schuster

The authors describe evaluation as a way of understanding and developing language programs: the thematic and background section sets out the decision-making, quality management, and learning functions of evaluation. Case studies illustrate the diversity of evaluation contexts, functions and approaches, documenting the ways in which evaluation processes and outcomes inform and facilitate program development, and contribute to explaining how language and teacher education programs constitute opportunities for learning. The ways in which evaluation practice can be researched and developed to maximize policy, institutional and program effectiveness is included, and a comprehensive set of resources for those commissioning, undertaking or researching language program evaluations concludes the text.
