This book constitutes the thoroughly refereed post-proceedings of the First International Conference on Software Engineering Approaches for Offshore and Outsourced Development, SEAFOOD 2007, Zurich, Switzerland, in February 2007. The 15 revised full papers constitute a balanced mix of academic

and industrial aspects and address topical regions such as processes, education, country reports, evaluation and assessment, communication and distribution, as well as tools.

Interfirm Networks in the Japanese Electronics Industry analyses changes in production networks in the Japanese electronics industry. Japan's post-war success in the assembly industries is frequently attributed to innovative

approaches to the organization of production: Japanese assemblers have tended to forge intricate networks of long-term interfirm business relationships. Traditionally, these networks have been characterized by hierarchical interfirm relationships resembling a pyramid. Paprzycki argues that as a result of global industry dynamics, such monolithic 'pyramidal' production networks have come under mounting pressure and are giving way to an increasing diversity of network arrangements. A major contributing factor is the growing cost and complexity of technology, which forces even the largest manufacturers to look beyond traditional network boundaries in order to gain access to complementary (technological) assets and capabilities.

This monograph provides the first comprehensive analysis of industrial development in Ireland and its impact on

Irish society between 1801-1922. Studies of Irish industrial history to date have been regionally focused or industry specific. The book addresses this problem by bringing together the economic and social dimensions of Irish industrial history during the Union between Ireland and Great Britain. In this period, British economic and political influences on Ireland were all pervasive, particularly in the industrial sphere as a consequence of the British industrial revolution. By making the Irish industrial story more relevant to a wider national and international audience and by adopting a more multi-disciplinary approach which challenges many of the received wisdoms derived from narrow regional or single industry studies - this book will be of interest to economic

historians across the globe as well as all those interested in Irish history more generally.

This book explains the strategic behaviors of platform firms on the global market, drawing on extensive research on the mobile communication systems, semiconductor equipment, personal computer, and automobile electronics industries. The book focuses on Ericsson, Applied Materials, Intel, and Bosch as representative global platform companies. The book's introductory

section reports on the rise of platform business and addresses the theoretical basis of their competitive edge, based on a review of prior studies on the network effect of open standards and the economic theory of strategic behavior. The platform business obviously secures a competitive advantage on the global market. Yet this theory alone does not provide sufficient explanation for why the platform business achieves competitiveness on the market. The book proposes a theoretical framework and provides rigorous supporting evidence by using case studies and empirical analysis on the global business of platform firms. This evidence reflects the variety of global ecosystems: the mobile communications system in China, the

semiconductor equipment industry in East Asia, personal computers in Taiwan, and automobile electronics in China. In conclusion, the book reviews these studies and identifies the key factors of platform strategy on the global market. Given its breadth of coverage, the book will benefit all academic researchers and undergraduate students in management and economics with an interest in global competition and collaboration in the open economy.

In the years between the two world wars, fascism triumphed in Italy, Germany, Spain and elsewhere, coming to power after intense struggles with the labour movements of those countries. This book, available in paperback for the

first time, analyses the way in which the British left responded to this new challenge. How did socialists and communists in Britain explain what fascism was? What did they do to oppose it, and how successful were they? In examining the theories and actions of the Labour Party, the TUC, the Communist Party and other, smaller left-wing groups, the book explains their different approaches, while at the same time highlighting the common thread that ran through all their interpretations of fascism. The author argues that the British left has been largely overlooked in the few specific studies of anti-fascism that exist, with the focus being disproportionately applied to its European counterparts. He also takes issue with recent developments in the

study of fascism, and argues that the views of the left, often derided by modern historians, are still relevant today.

This volume presents an exposition of topics in industrial statistics. It serves as a reference for researchers in industrial statistics/industrial engineering and a source of information for practicing statisticians/industrial engineers. A variety of topics in the areas of industrial process monitoring, industrial experimentation, industrial modelling and data analysis are covered and are authored by leading researchers or practitioners in the particular specialized topic. Targeting the audiences of researchers in academia as well as

practitioners and consultants in industry, the book provides comprehensive accounts of the relevant topics. In addition, whenever applicable ample data analytic illustrations are provided with the help of real world data.

Big data: It's unstructured, it's coming at you fast, and there's lots of it. In fact, the majority of big data is text-oriented, thanks to the proliferation of online sources such as blogs, emails, and social media. However, having big data means little if you can't leverage it with analytics. Now you can explore the large

volumes of unstructured text data that your organization has collected with Text Mining and Analysis: Practical Methods, Examples, and Case Studies Using SAS. This hands-on guide to text analytics using SAS provides detailed, step-by-step instructions and explanations on how to mine your text data for valuable insight. Through its comprehensive approach, you'll learn not just how to analyze your data, but how to collect, cleanse, organize, categorize, explore, and interpret it as well. Text Mining and Analysis also features an extensive set of case studies, so you can see examples of how the applications work with real-world data from a variety of industries. Text analytics enables you to gain insights about your customers' behaviors and sentiments. Leverage your

organization's text data, and use those insights for making better business decisions with Text Mining and Analysis. This book is part of the SAS Press program.

This book explores several problems and their solutions regarding data analysis and prediction for industrial applications. Machine learning is a prominent topic in modern industries: its influence can be felt in many aspects of everyday life, as the world rapidly embraces big data and data analytics. Accordingly, there is a pressing need for novel and innovative algorithms to help us find effective solutions in industrial application areas such as media, healthcare, travel, finance, and retail. In all of these areas, data is the crucial parameter, and the

main key to unlocking the value of industry. The book presents a range of intelligent algorithms that can be used to filter useful information in the above-mentioned application areas and efficiently solve particular problems. Its main objective is to raise awareness for this important field among students, researchers, and industrial practitioners. *Information Modelling and Knowledge Bases XVIII* Elsevier

By assessing the costs and benefits of military spending, the authors provide a "second opinion" on the subject of military economics. While advocates of increased military spending often stress the positive effects of the Pentagon on the economy, there has been little systematic summary of the "opportunity costs" that society pays for a large

military establishment. This book fills that gap.

The REV conference aims to discuss the fundamentals, applications and experiences in remote engineering, virtual instrumentation and related new technologies, as well as new concepts for education on these topics, including emerging technologies in learning, MOOCs & MOOLs, Open Resources, and STEM pre-university education. In the last 10 years, remote solutions based on Internet technology have been increasingly deployed in numerous areas of research, science, industry, medicine and education. With the new focus on cyber-physical systems, Industry 4.0, Internet of Things and the digital transformation in industry, economy and

education, the core topics of the REV conference have become indispensable elements of a future digitized society. REV 2018, which was held at the University of Applied Sciences in Duesseldorf from 21-23 March 2018, addressed these topics as well as state-of-the-art and future trends.

Statistical Case Studies for Industrial Process Improvement

"In the last decades, information modelling and knowledge bases have become hot topics not only in academic communities related to information systems and computer science, but also in business areas where information technology is applied. This book aims to exchange scientific results and experiences achieved in computer

science and other related disciplines using innovative methods and progressive approaches. A platform has been established drawing together researches as well as practitioners dealing with information modelling and knowledge bases. The main topics of this publication target the variety of themes in the domain of information modelling, conceptual analysis, design and specification of information systems, ontologies, software engineering, knowledge and process management, data and knowledge bases. The editors also aim at applying new progressive theories. To this end, much attention is also being paid to theoretical disciplines including cognitive science, artificial intelligence, logic, linguistics and analytical philosophy. The selected

papers cover many areas of information modelling, namely theory of concepts, database semantics, knowledge representation, software engineering, WWW information management, context-based information retrieval, ontological technology, image databases, temporal and spatial databases, document data management, process management, and many others."

This book examines the interplay between trade and the environment, with a focus on the Indian textile sector. While it is often claimed that developed countries' non-tariff trade measures adversely affect the trade prospects of

developing countries, establishing that claim systematically is a challenging task. This book examines the dilemma on the basis of various approaches, including a primary survey of different stakeholders and the large-scale modelling of the economy-environment inter-linkages. The interplay between the costs involved in meeting environmental regulations and the potential price-premiums that the cleaner products would get in the international market is analysed in order to assess the future trade prospects for Indian textiles. In addition, the book provides a comprehensive overview of the present scenario of the Indian textile sector. Accordingly, it will be of great interest to researchers, policy makers and graduate students specializing in environmental

economics, development economics and international economics.

The Electronic Device Failure Analysis Society proudly announces the Seventh Edition of the Microelectronics Failure Analysis Desk Reference, published by ASM International. The new edition will help engineers improve their ability to verify, isolate, uncover, and identify the root cause of failures. Prepared by a team of experts, this updated reference offers the latest information on advanced failure analysis tools and techniques, illustrated with numerous real-life examples. This book is geared to practicing engineers and for studies in the major area of power plant engineering. For non-metallurgists, a

chapter has been devoted to the basics of material science, metallurgy of steels, heat treatment, and structure-property correlation. A chapter on materials for boiler tubes covers composition and application of different grades of steels and high temperature alloys currently in use as boiler tubes and future materials to be used in supercritical, ultra-supercritical and advanced ultra-supercritical thermal power plants. A comprehensive discussion on different mechanisms of boiler tube failure is the heart of the book. Additional chapters detailing the role of advanced material characterization techniques in failure investigation and the role of water chemistry in tube failures are key contributions to the book.
