 Modeling with Excel presents various
 methods used to build and analyze
 mathematical models in a format that
 students can quickly comprehend. Excel is
 used as a tool to accomplish this goal of
 building and analyzing the
 models.Mathematical Modeling With
 ExcelA typical section begins with a
 general description of the scenario being
 modeled. The model is then built using the
 appropriate mathematical tools. Then it is
 implemented and analyzed in Excel via
 step-by-step instructions. In the exercises,
 we ask students to modify or refine the
 existing model, analyze it further, or adapt
 it to similar scenarios.Mathematical

 ExcelExcelets are interactive Excel
 spreadsheets or simulations of
 mathematical models. The user changes a
 variable and the spreadsheet changes in
 numerical, graphical, and/or even symbolic
 form (equations). Through the use of
 numerical experimentation and "what if"

scenarios, we have a powerful learning
 tool for students using readily available
 off-the-shelf software.Interactive Excel
