At a time when increased independence requirements for auditors, legal backing for auditing standards, and increased audit documentation requirements have occurred, this book examines key issues in the market for audit services in Australia. It investigates issues including: the understandability of audit and the state of the audit expectations gap; auditors' business acumen and industry expertise; the auditors' use of materiality; whether or not the increasingly prescriptive nature of auditing is creating a distraction from the 'real' audit task and stifling auditors' judgement; whether or not CLERP 9 reforms involving audit partner rotation and restrictions on non-audit service provision are efficient and effective and reactions to the increasing scrutiny of auditors and audit firms by regulators. With its thorough coverage of contemporary issues, this book intersperses the authors' summaries, interpretations and recommendations with the perceptions, expressed in their own words in order to faithfully convey their candid assessments, of users of audit reports, purchasers and suppliers of the audit product, auditing standard setters and regulators of the audit market.

The four editors have written two of the chapters, including the "Introduction" which is more substantial and useful than an average introduction. The remaining 14 chapters are contributed by 22 distinguished authors who work in nine different countries. The quality of the writing is high throughout. The Handbook should be warmly welcomed by policy-makers and academics, especially those of us who have not paid enough attention to such matters in the past.' - Christopher Nobes, Royal Holloway, University of London, UK 'Trevor Hopper and his colleagues provide a central point of reference for research into accounting and development. Definitive chapters from internationally recognised authors (including Marcia Annisette, Kerry Jacobs, Chris Poullaos, Brendan O'Dwyer, Chibuike Uche and Jeffrey Unerman) cover the full range of issues from the role of capital markets in development, through accounting professionalization, to taxation and transfer pricing. Contributions from authors working for donors and non-governmental organisations provide a useful practical dimension that builds on the more academic chapters.' - Christopher Napier, Royal Holloway, University of London, UK This innovative and informative Handbook brings together leading international researchers on accounting and development to review empirical evidence, issues, policies and practices both past and present. The perspectives of the expert contributors reflect the strong growth of research on the topic, as accounting is increasingly recognised as an important factor in development. Valuation: The Art and Science of Corporate Investment Decisions is the first textbook to offer an integrated approach to both project and enterprise valuation. The text goes beyond standard DCF analysis by including additional valuation methods commonly used in practice, such as comparables, simulations (including Crystal Ball®), and real options. In addition, discussions are considered against the backdrop of other quantitative and qualitative corporate issues that affect valuation, including: Organizational structure and incentives: The text examines how the corporate decision-making process as well as the incentive system can positively or negatively affect valuation. Strategic analysis and real options: Real options are presented as a tool to complement executive intuition and provide a more disciplined evaluation process that focuses on creating value. Risk management and hedging: Risks associated with interest rate fluctuations, variable foreign exchange rates, and fluctuating commodity prices can create hedging and risk management opportunities that affect value. Financing: The ability to secure attractive financing terms is an important source of value, and readers should understand how financing opportunities influence the value of an investment opportunity. Irrational behavior: The text examines how limitations in cognitive abilities and biases in assessing abilities of key players can affect valuation.

This book examines and explains the intellectual capital reporting practices, with a human capital focus, of firms located in the developing nation of Sri Lanka. The study ascertains the following: first, to what extent the industry groups, based on the number of shareholders, differ in their ICR practices; and second, to what extent firms in Sri Lanka differ from counterparts in other nations in their intellectual capital reporting practices. An important aspect of this book is looking at the practices from a critical perspective to providing a more balanced view of 'good' and 'bad' effects of intellectual capital. The book meticulously outlines an extensive literature review, research methods, the theoretical perspective, findings with an engaging discussion, and concluding remarks. Indra Abeysekera's fine research project is an impressive contribution to an emerging area of interest throughout academia and industry.

The book will help in problem solving as it also presents more than 100 case studies and failure investigations from the space sector that can, by analogy, be applied to other industries. Difficult-to-find material data is included for reference. The sciences of metallic (primarily) and organic materials presented throughout the book demonstrate how they can be applied as an integral part of spacecraft product assurance schemes, which involve quality, material and processes evaluations, and the selection of mechanical and component parts. In this successor edition, which has been revised and updated, engineering problems associated with critical spacecraft hardware and the space environment are highlighted by over 500 illustrations including micrographs and fractographs. Space hardware captured by astronauts and returned to Earth from long durations in space are examined. Information detailed in the Handbook is applicable to general terrestrial applications including consumer electronics as well as high reliability systems associated with aeronautics, medical equipment and ground transportation. This Handbook is also directed to those involved in maximizing the reliability of new materials and processes for space technology and space engineering. It will be invaluable to engineers concerned with the construction of advanced structures or mechanical and electronic sub-systems.

Edward Elgar Publishing

In resource poor, cost saving times, this book provides practical advice on new methods and technologies involved in systematic searching and explores the role of information professionals in delivering these changes. The editors bring together expert international practitioners and researchers to highlight the latest thinking on systematic searching. Beginning by looking at the methods and techniques underlying systematic searching, the book then examines the current challenges and the potential solutions to more effective searching in detail, before considering the role of the information specialist as an expert searcher. *Systematic Searching* blends theory and practice and takes into account different approaches to information retrieval with a special focus being given to searching for complex topics in a health-related environment. The book does not presume an in-depth prior knowledge or experience of systematic searching and includes case studies, practical examples and ideas for further research and reading. The book is divided into three parts: *Methods* covers theoretical approaches to evidence synthesis and the implications that these have for the search process, including searching for complex topics and choosing the right sources. *Technology* examines new technologies for retrieving evidence and how these are leading to new directions in information retrieval and evidence synthesis. *People* considers the future of the information specialist as an expert searcher and explores how information professionals can develop their skills in searching, communication and collaboration to ensure that information retrieval practice is, and remains, evidence-based. *Systematic Searching* will be essential reading for library and information service providers and information specialists, particularly those in a health-related environment. It will also be of interest to students of library and information science, systematic reviewers, researchers and practitioners conducting complex searches in settings including social care, education and criminal justice.
