How This Book Can Help You This book is an exhaustive collection of my step-by-step tutorials and demos on PLC programming for beginners and advanced learners alike. You will find this book very helpful if you are an electrician, an instrumentation technician, an automation professional or engineer looking to improve your PLC programming knowledge. It is accompanied with 101 in-depth HD demo videos. These videos simplify everything you need to understand, and help you speed up your learning of Allen-Bradley's RSLogix 500 & 5000 software and hardware. There is also a link in this book for you to download my PLC programs (codes) for your revision. Since I assume you have little knowledge of PLCs and PLC programming, I prepared this book in such a way that when you read it and study the accompanying demo videos, you will not only have an in-depth knowledge of common Allen-Bradley's Programmable Logic Controllers, you will also gain a lot of job experience you need to build innovations and earn higher salaries. This book begins with the fundamental knowledge you need to start writing your very first PLC program. It goes on to teach the more advanced topics of PLCs that you need to become a paid professional in the field of PLC programming. So, after studying this volume, which is presented in the form of tutorials, you should have a clear understanding of the structure of ladder logic programming and be able to apply it to real world industrial applications. The best way to master PLC programming is to use real world situations. The real-world scenarios and industrial applications developed in this book and its accompanying 101 video demos will help you learn better and faster many of the functions and features of both the RSLogix 500 and RSLogix 5000 platforms. The methods presented in the demo videos are those that are usually employed in the real world of industrial automation, and they may be all that you will ever need to learn. The information in this book and the demo videos is very valuable, not only to those who are just starting out, but also to other skillful PLC programmers no matter their skill level. Merely having a PLC user manual or referring to the help contents is far from enough in becoming a skillful PLC programmer. Therefore, this book is extremely useful for building PLC programming skills. First, it will give you a big head start if you have never programmed a PLC before. Then it will teach you more advanced techniques you need to learn, design and build anything from simple to complex programs on the RSLogix 5000 (now called Studio 5000) platform. One of the questions I get asked often by beginners is, where can I get a free download of RSLogix 500 to practice? I provide in this volume links to a free version of the RSLogix Micro Starter Lite (which is essentially the same programming environment as the RSLogix 500 Pro) and a free version of the RSLogix Emulate 500. I also provide links to download the demo edition of RSLogix 5000 / Studio 5000 Logix Designer to your system. I do not only show you how to get these important Rockwell Automation software for free and without hassle, I also show with HD videos how to install, configure, navigate and use them to write ladder logic programs. P> Finally, I provide further help/support. So if you have questions or need further help, use the support link I provided in this book. I will get back to you very quickly. This book explores how Chinese films constructed an image of China in the 1980s through analyzing the characters, composition of space, and conflict patterns of the films. It also examines the relationship between the representations in Chinese cinema and the realities of Chinese society. The study analyzes the imagery, metaphors, and cultural values of Chinese films in the 1980s to discover the common creative focus of Chinese film directors at the time. It also examines the specific creative elements and cultural significance of Chinese cinema in the 1980s. This book is neither a "period history" of Chinese cinema in the 80s, nor a thematic study of the "fifth generation". Rather, it is an analysis of films as narrative texts that reflected on history. It uses the perspectives revealed by characters, narrative patterns, and conflicts in films of the 1980s to examine how the era was perceived at that time as well as how China's national future and individuals' personal futures were being conceptualized. This title will be a valuable resource for scholars and students of Chinese Studies, Contemporary China Studies, Film Studies, and those who are interested in Chinese culture and society in general.

Published as part of the managing radioactive waste safely (MRWS) programme, this white paper sets out the UK Government's framework for managing higher activity radioactive waste in the long-term through geological disposal, coupled with safe and secure interim storage and ongoing research and development to support its optimised implementation. It also invites communities to express an interest in opening up, without commitment, discussions with Government on the possibility of hosting a geological disposal facility at some point in the future. In June 2007 the Government published a MRWS consultation document in conjunction with the devolved administrations for Wales and Northern Ireland. Responses to this consultation have been taken into consideration in the development of this white paper. The paper sets out the framework for the future implementation of geological disposal that includes: the approach to compiling and updating the UK Radioactive Waste Inventory (UKRWI) and using it as a basis for discussion with potential host communities; the Nuclear Decommissioning Authority's technical approach for developing a geological disposal facility, including the use of a staged implementation approach and ongoing research and development to support delivery. The white paper covers the amount of waste for disposal; preparation and planning for geological disposal; protecting people and the environment: regulation, planning and independent scrutiny; site selection using a voluntarism and partnership approach; the site assessment process; timing and next steps.
