Providing a structured programme for teaching literacy to children and young people with dyslexia and specific literacy difficulties, this book makes explicit links between theory, research and practice. It offers a structured, cumulative, multi-sensory teaching programme for learners with dyslexia, and draws attention to some of the wider aspects of the learning styles and differences of learners with dyslexia such as memory, information processing and automaticity. The book discusses: - the rationale for a structured multi-sensory approach - the development of phonological, reading, writing and spelling skills - working with learners who have English as an additional language (EAL) - lesson structure and lesson-planning - alphabet and dictionary skills - memory work and study skills - teaching the programme to groups - ideas for working with young children.

Designed to help support any learner, from ages five to 18, with dyslexia or specific learning difficulties, the authors encourage the use of the programme as part of everyday teaching to not only develop literacy but to put dyslexic learners in control of their own learning. There are tried and tested strategies and activities provided, which the reader can use to support their literacy work. Particularly useful for teachers working with learners who have special educational needs and specifically those with dyslexia, this book contains everything you need to help improve and develop the literacy skills of the learners in your setting. Learning What Comes Naturally Teaching Play Skills to Young Children with Challenging BehaviorsBy

Makenzie Gillaspie Learning occurs in the context of play for young children. Previous research has shown that many young children lack developmentally appropriate play skills. Play interventions have been developed to assist those children who may be lacking play skills. However, there is little research on direct play skill interventions for children who exhibit challenging behaviors. This study examined the effects of a four-week play skill intervention for six children with behavioral needs who attend a mental health day-treatment facility. Three children were in the play skill intervention group and three children in the comparison group. The intervention occurred twice a week for four weeks and followed a "Plan, Play, and Review" method. All three children in the intervention group increased in the amount of time spent in pretend play and the highest level of play achieved Teaching Play to Children with Autism Practical Interventions using Identiplay

In modern childhood, free, unstructured play time is being replaced more and more by academics, lessons, competitive sports, and passive, electronic entertainment. While parents may worry that their children will be at a disadvantage if they are not engaged in constant, explicit learning or using the latest "educational" games, David Elkind's *The Power of Play* reassures us that unscheduled imaginative play goes far in preparing children for academic and social success. Through expert analysis of the research and powerful situational examples, Elkind shows that, indeed, creative spontaneous activity best sets the stage for academic learning in the first place: Children learn mutual respect and cooperation through role-playing and the negotiation of rules, which in turn prepare them for successful classroom learning; in simply playing with rocks, for example, a child could discover properties of counting and shapes that are the underpinnings of math; even a toddler's babbling is a necessary precursor to the acquisition of language. An important contribution to the literature about how children learn, *The Power of Play* suggests ways to restore play's respected place in children's lives, at home, at school, and in the larger community. In defense of unstructured "down time," it encourages parents to trust their instincts and resist the promise of the wide and dubious array of educational products on the market geared to youngsters.

Practical Interventions Using Identiplay Redleaf Press

Young children can surprise us with tough questions. Tominey's essential guide teaches us how to answer them and foster compassion along the way. If you had to choose one word to describe the world you want children to grow up in, what would it be? Safe? Understanding? Resilient? Compassionate? As parents and caregivers of young children, we know what we want for our children, but not always how to get there. Many children today are stressed by academic demands, anxious about relationships at school, confused by messages they hear in the media, and overwhelmed by challenges at home. Young children look to the adults in their lives for everything. Sometimes we're prepared... sometimes we're not. In this book, Shauna Tominey guides parents and caregivers through how to have conversations with young children about a range of topics—from what makes us who we are (e.g., race, gender) to tackling challenges (e.g., peer pressure, divorce, stress) to showing compassion (e.g., making friends, recognizing privilege, being a helper). Talking through these topics in an age-appropriate manner—rather than telling children they are too young to understand—helps children recognize how they feel and how they fit in with the world around them. This book provides sample conversations, discussion prompts, storybook recommendations, and family activities. Dr. Tominey's research-based strategies and practical advice creates dialogues that teach self-esteem, resilience, and empathy: the building blocks for a more compassionate world.

Teaching Social Skills to Young Children with Autism Harper Collins

Children on the autistic spectrum and those with specific communication disorders often demonstrate a difficulty in learning to play and a resulting isolation from their peers. The Identiplay intervention, based on the work of Beyer and Gammeltoft, promotes the development of social skills and social understanding, imagination, exploration, flexibility and change. By learning these skills the young person can enjoy reciprocal play with an adult or peer. In this book the authors explain how to use this positive and practical intervention and provide three video clips with case histories and a PowerPoint presentation to facilitate professional training. There is also advice on ways of adapting Identiplay to further extend play skills, moving away from the original format of a table-top activity, and applying the principles in a wider range of activities, such as role play, the development of leisure activities, water play and outdoor games. The theoretical basis for the programme is also explained, drawing on the authors' analysis of the function and development of play in children not on the autistic spectrum. The programme is suitable for all practitioners in educational and care settings who work with young children on the autistic spectrum or with communication difficulties, and is also appropriate for parents looking for an effective and enjoyable intervention to use with their own children.

The Effects of Camera Perspective for Teaching Thematic Play Skills to Young Children with Autism Teachers College Press

This book aims to help policy makers, stakeholders, practitioners, and teachers in psychology and education provide more effective interventions in educational contexts. It responds to disappointment and global concern about the failure to implement psychological and other interventions successfully in real-world contexts. Often interventions, carefully designed and trialed under controlled conditions, prove unpredictable or ineffective in uncontrolled, real-life situations.

This book looks at why this is the case and pulls together evidence from a range of sources to create original frameworks and guidelines for effective implementation of interventions.
