Marshall/Johnston's
Marketing Management,
2e has taken great effort
to represent marketing
management the way it is
actually practiced in

successful organisations today. Given the dramatic changes in the field of marketing, it is a sure bet that the job of leading marketing manager's contributions to the organisation and its customers, clients, and partners has changed at the same level. Yet, no marketing management book on the market today fully and effectively captures and communicates to students how marketing management is really practiced in the 21st century business world.

Clearly, it is time for an updated approach to teaching and learning within the field. Marketing Management 2e is designed to fulfill this need.

Imaginative Communities

Simon and Schuster
 Outlines a provocative approach to diplomacy that addresses the needs of today's globalized world, covering issues ranging from economic imbalance and environmental stress with recommendations for specific actions to unify the resources of

governments, corporations and civic groups.

Connectography John Wiley & Sons

First published in Great Britain in 2015 by Elliott and Thompson Limited.

Splinternet OR Books

For executives, strategists, and students of technology-driven industries, this is a powerful playbook for the high-stakes innovation game. Chakravorti provides a new framework for interconnected choice built on concepts from game theory and carried

out using hands-on, go-to-market strategies.

Prisoners of Geography

Springer

'We need effective citizen-lobbyists – not just likers, followers or even marchers – more than ever. I have no hesitation in lobbying you to read this book.' Bill Emmott, former editor in chief, the Economist Many democratic societies are experiencing a crisis of faith. Citizens are making clear their frustration with their supposedly representative governments, which

instead seem driven by the interests of big business, powerful individuals and wealthy lobby groups. What can we do about it? How do we fix democracy and get our voices heard? The answer, argues Alberto Alemanno, is to become change-makers – citizen lobbyists. By using our skills and talents and mobilizing others, we can bring about social and political change. Whoever you are, you've got power, and this book will show you how to unleash it. From successfully

challenging Facebook's use of private data to abolishing EU mobile phone roaming charges, Alberto highlights the stories of those who have lobbied for change, and shows how you can follow in their footsteps, whether you want to influence immigration policy, put pressure on big business or protect your local community.

The Forces Uprooting Us

Random House

From the visionary bestselling author of *The Second World* and *How to Run the World* comes a

bracing and authoritative guide to a future shaped less by national borders than by global supply chains, a world in which the most connected powers—and people—will win. Connectivity is the most revolutionary force of the twenty-first century. Mankind is reengineering the planet, investing up to ten trillion dollars per year in transportation, energy, and communications infrastructure linking the world's burgeoning megacities together. This has profound

consequences for geopolitics, economics, demographics, the environment, and social identity. Connectivity, not geography, is our destiny. In *Connectography*, visionary strategist Parag Mehta travels from Ukraine to Iran, Mongolia to North Korea, Pakistan to Nigeria, and across the Arctic Circle and the South China Sea to explain the rapid and unprecedented changes affecting every part of the planet. He shows how militaries are deployed to protect supply chains as

much as borders, and how nations are less at war over territory than engaged in tugs-of-war over pipelines, railways, shipping lanes, and Internet cables. The new arms race is to connect to the most markets—a race China is now winning, having launched a wave of infrastructure investments to unite Eurasia around its new Silk Roads. The United States can only regain ground by fusing with its neighbors into a super-continental North American Union of shared

resources and prosperity. Connectography offers a unique and hopeful vision for the future. Khanna argues that new energy discoveries and technologies have eliminated the need for resource wars; ambitious transport corridors and power grids are unscrambling Africa's fraught colonial borders; even the Arab world is evolving a more peaceful map as it builds resource and trade routes across its war-torn landscape. At the same time, thriving hubs such as Singapore

and Dubai are injecting dynamism into young and heavily populated regions, cyber-communities empower commerce across vast distances, and the world's ballooning financial assets are being wisely invested into building an inclusive global society. Beneath the chaos of a world that appears to be falling apart is a new foundation of connectivity pulling it together. Praise for Connectography "Incredible . . . With the world rapidly changing and urbanizing,

[Khanna's] proposals might be the best way to confront a radically different future."—The Washington Post "Clear and coherent . . . a well-researched account of how companies are weaving ever more complicated supply chains that pull the world together even as they squeeze out inefficiencies. . . . [He] has succeeded in demonstrating that the forces of globalization are winning."—Adrian Woolridge, The Wall Street Journal "Bold . . . With an eye for vivid

details, Khanna has . . . produced an engaging geopolitical travelogue.”—Foreign Affairs “For those who fear that the world is becoming too inward-looking, Connectography is a refreshing, optimistic vision.”—The Economist “Connectivity has become a basic human right, and gives everyone on the planet the opportunity to provide for their family and contribute to our shared future. Connectography charts the future of this connected world.”—Marc

Andreessen, general partner, Andreessen Horowitz “Khanna’s scholarship and foresight are world-class. A must-read for the next president.”—Chuck Hagel, former U.S. secretary of defense

Bringing Innovations to Market in a Connected World Orca Currents

This book takes the reader beyond net effects and main and interaction effects thinking and methods. Complexity theory includes the tenet that recipes are more important than

ingredients—any one antecedent (X) condition is insufficient for a consistent outcome (Y) (e.g., success or failure) even though the presence of certain antecedents may be necessary. A second tenet: modeling contrarian cases is useful because a high or low score for any given antecedent condition (X) associates with a high Y, low Y, and is irrelevant for high/low Y in some recipes in the same data set. Third tenet: equifinality happens—several recipes indicate high/low

outcomes.

Business Success Through Customer Engagement

H B S Press

An eye-opening assessment of American power and deglobalization in the bestselling tradition of *The World is Flat* and *The Next 100 Years*. Near the end of the Second World War, the United States made a bold strategic gambit that rewired the international system.

Empires were abolished and replaced by a global arrangement enforced by the U.S. Navy. With all the world's oceans safe for

the first time in history, markets and resources were made available for everyone. Enemies became partners. We think of this system as normal - it is not. We live in an artificial world on borrowed time. In *The Accidental Superpower*, international strategist Peter Zeihan examines how the hard rules of geography are eroding the American commitment to free trade; how much of the planet is aging into a mass retirement that will enervate markets and

capital supplies; and how, against all odds, it is the ever-ravenous American economy that - alone among the developed nations - is rapidly approaching energy independence. Combined, these factors are doing nothing less than overturning the global system and ushering in a new (dis)order. For most, that is a disaster-in-waiting, but not for the Americans. The shale revolution allows Americans to sidestep an increasingly dangerous energy market. Only the

United States boasts a youth population large enough to escape the sucking maw of global aging. Most important, geography will matter more than ever in a de-globalizing world, and America's geography is simply sublime.

Move Hachette UK

A compelling look at the powerful global forces that will cause billions of us to move geographically over the next decades, ushering in an era of radical change. In the 60,000 years since people began colonizing the

continents, a recurring feature of human civilization has been mobility—the ever-constant search for resources and stability. Seismic global events—wars and genocides, revolutions and pandemics—have only accelerated the process. The map of humanity isn't settled—not now, not ever. As climate change tips toward full-blown crisis, economies collapse, governments destabilize, and technology disrupts, we're entering a new age

of mass migrations—one that will scatter both the dispossessed and the well-off. Which areas will people abandon and where will they resettle? Which countries will accept or reject them? As today's world population, which includes four billion restless youth, votes with their feet, what map of human geography will emerge? In *Move*, celebrated futurist Parag Khanna provides an illuminating and authoritative vision of the next phase of human civilization—one that is

both mobile and sustainable. As the book explores, in the years ahead people will move to where the resources are and technologies will flow to the people who need them, returning us to our nomadic roots while building more secure habitats. *Move* is a fascinating look at the deep trends that are shaping the most likely scenarios for the future. Most important, it guides each of us as we determine our optimal location on humanity's

ever-changing map. *The New Map* Random House Geofusion is an exciting journey around the main issues of the 21st century. This is a book with roadmaps that show the complexity of our world, the interconnections between places, people, schools of thoughts, and disciplines. Starting with a geographical frame of reference, readers are taken through the global geo-economic trends and likely future scenarios as well as the driving forces

of the new world economy. The book points to the importance of cities as the power centers for the multidimensional global network of the 21st century. Geofusion is a thought-provoking guidebook to our interconnected world.

A Practical Guide

Regnery Publishing In this book, Jane Jacobs, building on the work of her debut, *The Death and Life of Great American Cities*, investigates the delicate way cities balance the interplay between the domestic

production of goods and the ever-changing tide of imports. Using case studies of developing cities in the ancient, pre-agricultural world, and contemporary cities on the decline, like the financially irresponsible New York City of the mid-sixties, Jacobs identifies the main drivers of urban prosperity and growth, often via counterintuitive and revelatory lessons.

How to Run the World

Random House

Incorporated

A great new title from Regnery Publishing, the

leader in conservative books since 1947.

Global Elites and the Permanent Lockdown

Rowman & Littlefield

A source book for

American culture in the 1960s and 1970s:

“suggested reading” from the Last Whole Earth Catalog, from Thoreau to James Baldwin. The Whole Earth Catalog was a cultural touchstone of the 1960s and 1970s. The iconic cover image of the Earth viewed from space made it one of the most recognizable books on bookstore shelves.

Between 1968 and 1971, almost two million copies of its various editions were sold, and not just to commune-dwellers and hippies. Millions of mainstream readers turned to the Whole Earth Catalog for practical advice and intellectual stimulation, finding everything from a review of Buckminster Fuller to recommendations for juicers. This book offers selections from eighty texts from the nearly 1,000 items of “suggested reading” in the Last Whole Earth Catalog.

After an introduction that provides background information on the catalog and its founder, Stewart Brand (interesting fact: Brand got his organizational skills from a stint in the Army), the book presents the texts arranged in nine sections that echo the sections of the Whole Earth Catalog itself. Enlightening juxtapositions abound. For example, “Understanding Whole Systems” maps the holistic terrain with writings by authors from Aldo Leopold to Herbert Simon; “Land Use”

features selections from Thoreau's *Walden* and a report from the United Nations on new energy sources; “Craft” offers excerpts from *The Book of Tea* and *The Illustrated Hassle-Free Make Your Own Clothes Book*; “Community” includes Margaret Mead and James Baldwin's odd-couple collaboration, *A Rap on Race*. Together, these texts offer a sourcebook for the Whole Earth culture of the 1960s and 1970s in all its infinite variety. *The Commonwealth of*

Self Interest Hachette UK Which lines on the map matter most? It's time to reimagine how life is organized on Earth. In *Connectography*, Parag Khanna guides us through the emerging global network civilization in which mega-cities compete over connectivity and borders are increasingly irrelevant. Travelling across the world, Khanna shows how twenty-first-century conflict is a tug-of-war over pipelines and Internet cables, advanced technologies and market

access. Yet Connectography also offers a hopeful vision of the future - beneath the chaos of a world that appears to be falling apart, a new foundation of connectivity is pulling it together.

[How Geopolitics and Commerce Are Fragmenting the World Wide Web](#) Penguin

A Wall Street Journal bestseller and a USA Today Best Book of 2020 Named Energy Writer of the Year for The New Map by the American Energy Society “A master class on how

the world works.” —NPR Pulitzer Prize-winning author and global energy expert, Daniel Yergin offers a revelatory new account of how energy revolutions, climate battles, and geopolitics are mapping our future The world is being shaken by the collision of energy, climate change, and the clashing power of nations in a time of global crisis. Out of this tumult is emerging a new map of energy and geopolitics. The “shale revolution” in oil and gas has transformed the American

economy, ending the “era of shortage” but introducing a turbulent new era. Almost overnight, the United States has become the world's number one energy powerhouse. Yet concern about energy's role in climate change is challenging the global economy and way of life, accelerating a second energy revolution in the search for a low-carbon future. All of this has been made starker and more urgent by the coronavirus pandemic and the economic dark age that it

has wrought. World politics is being upended, as a new cold war develops between the United States and China, and the rivalry grows more dangerous with Russia, which is pivoting east toward Beijing. Vladimir Putin and China's Xi Jinping are converging both on energy and on challenging American leadership, as China projects its power and influence in all directions. The South China Sea, claimed by China and the world's most critical trade route, could become the

arena where the United States and China directly collide. The map of the Middle East, which was laid down after World War I, is being challenged by jihadists, revolutionary Iran, ethnic and religious clashes, and restive populations. But the region has also been shocked by the two recent oil price collapses--and by the very question of oil's future in the rest of this century. A master storyteller and global energy expert, Daniel Yergin takes the reader on an utterly riveting and

timely journey across the world's new map. He illuminates the great energy and geopolitical questions in an era of rising political turbulence and points to the profound challenges that lie ahead.

Icon Books

The successful book 'Il Secolo Decisivo' is available for the first time in English - now in a new, revised edition! At the turn of the 22nd century, human beings are living in the most prosperous moment in history. The many crises that troubled

them at the dawn of the millennium are a distant memory, the economy exists in balance with the environment, and work has become a personal choice. But how did we get here? How did we solve the great problems of the contemporary world, from climate change to the labor market crisis, from the gaping inequalities in wealth distribution to the spreading new populisms and nationalisms? Using a broad range of academic sources and an accessible writing style, Tabellini offers a vision of a

prosperous future with its roots firmly in the present and its branches always in the realm of possibility. *Pre-Suasion* Simon and Schuster As today's preeminent doomsday investor Mark Spitznagel describes his Daoist and roundabout investment approach, "one gains by losing and loses by gaining." This is Austrian Investing, an archetypal, counterintuitive, and proven approach, gleaned from the 150-year-old Austrian School of economics, that is both

timeless and exceedingly timely. In *The Dao of Capital*, hedge fund manager and tail-hedging pioneer Mark Spitznagel—with one of the top returns on capital of the financial crisis, as well as over a career—takes us on a gripping, circuitous journey from the Chicago trading pits, over the coniferous boreal forests and canonical strategists from Warring States China to Napoleonic Europe to burgeoning industrial America, to the great economic thinkers of late

19th century Austria. We arrive at his central investment methodology of Austrian Investing, where victory comes not from waging the immediate decisive battle, but rather from the roundabout approach of seeking the intermediate positional advantage (what he calls *shi*), of aiming at the indirect means rather than directly at the ends. The monumental challenge is in seeing time differently, in a whole

new intertemporal dimension, one that is so contrary to our wiring. Spitznagel is the first to condense the theories of Ludwig von Mises and his Austrian School of economics into a cohesive and—as Spitznagel has shown—highly effective investment methodology. From identifying the monetary distortions and non-randomness of stock market routs (Spitznagel's bread and butter) to scorned highly-productive assets, in Ron Paul's words from

the foreword, Spitznagel “brings Austrian economics from the ivory tower to the investment portfolio.” The *Dao of Capital* provides a rare and accessible look through the lens of one of today's great investors to discover a profound harmony with the market process—a harmony that is so essential today. *Present Shock* Pantheon The first comprehensive look at the collaborative economy and autonomous world. Featuring visionary entrepreneurs and

bestselling authors such as Adam Grant, Brad Feld, Shane Snow, Alex Bogusky, Douglas

Rushkoff, Rita McGrath, and Martin Ford; as well as leaders of the collaborative economy movement including

Robin Chase, Chelsea Rustrum, Neal Gorenflo, Antonin Leonard, and Arun Sundararajan
