Praise for Algorithmic TRADING “Algorithmic Trading is an insightful book on quantitative trading written by a seasoned practitioner. What sets this book apart from many others in the space is the emphasis on real examples as opposed to just theory. Concepts are not only described, they are brought to life with actual trading strategies, which give the reader insight into how and why each strategy was developed, how it was implemented, and even how it was coded. This book is a valuable

resource for anyone looking to create their own systematic trading strategies and those involved in manager selection, where the knowledge contained in this book will lead to a more informed and nuanced conversation with managers.” —DAREN SMITH, CFA, CAIA, FSA, Managing Director, Manager Selection & Portfolio Construction, University of Toronto Asset Management “Using an excellent selection of mean reversion and momentum strategies, Ernie explains the rationale behind each one, shows how to test it, how to improve it, and discusses implementation issues. His book is a careful, detailed exposition of the scientific method applied to strategy development. For serious retail traders, I know of no other book that provides this range of examples and level of detail. His discussions of how regime

changes affect strategies, and of risk management, are invaluable bonuses.” —ROGER HUNTER, Mathematician and Algorithmic Trader

How to Pass the Professional Skills Tests for Initial Teacher Training (ITT) MDPI

This QTS skills test book is one in a series of books aimed at helping prospective teachers prepare for their professional skills tests. This QTS book presents realistic practice tests that give people an insight into the topics and types of questions that may appear in the professional skills exams. The book contains 4 numeracy skills tests and 4 literacy skills tests with corresponding answers, so you can easily check which questions you have answered correctly whilst determining the areas you need to work on. Both sets of practice tests follow the same structure as the actual exam. The literacy tests cover spelling, punctuation, grammar and comprehension; whilst the numeracy tests contain all the major topics covered in the exam. Both sets of tests have an answers section, but they do not contain detailed solutions or explanations. The tests within this book are a good form of practise for both of your professional skills tests but we do strongly recommend that the tests are used in combination with online practice tests that provide a test format more closely aligned with the real exams which are carried out on computers. To access a free online numeracy and literacy test please visit www.qtsmathstutor.co.uk.

CALLing Student Teachers. Modern Language Student Teachers and their Perceptions of Computer Assisted Language Learning (CALL) in Initial Teacher Education

Kogan Page Publishers

Whilst most teachers are skilled in providing opportunities for the progression of children's learning, it is often without fully understanding the theory behind it. With greater insight into what is currently known about the processes of learning and about

individual learning preferences, teachers are better equipped to provide effective experiences and situations which are more likely to lead to lasting attainment. Now fully updated, *Ways of Learning* seeks to provide an understanding of the ways in which learning takes place, which teachers can make use of in their planning and teaching, including: An overview of learning Behaviourism and the beginning of theory Cognitive and constructivist learning Multiple intelligences Learning styles Difficulties with learning The influence of neuro-psychology Relating theory to practice The third edition of this book includes developments in areas covered in the first and second editions, as well as expanding on certain topics to bring about a wider perspective; most noticeably a newly updated and fully expanded chapter on the influence of neuro-educational research. The book also reflects changes in government policy and is closely related to new developments in practice. Written for trainee teachers, serving teachers, and others interested in learning for various reasons, *Ways of Learning* serves as a valuable introduction for students setting out on higher degree work who are in need of an introduction to the topic.

The depletion of natural energy resources provides evidential adverse impacts on world economy functionality. The strong requirement of a sustainable energy supply has escalated intensive research and the discovery of cleaner energy sources, as well as efficient energy management practices. In the context of a circular economy, this research not only targets the optimisation of resources utilisation at different stages but also emphasises the eco-design of products to extend production life

spans. Based on this concept, this book discusses the roles of process integration approaches, renewable energy sources utilisation and design modifications in addressing the process energy and exergy efficiency improvement. The primary focus is to enhance the economic and environmental performance through process analysis, modelling and optimisation. The articles mainly show the contribution of each aspect: (a) design and numerical study for innovative energy-efficient technologies, (b) process integration—heat and power, (c) process energy efficiency or emission analysis, and (d) optimisation of renewable energy resources' supply chain. The articles are based on the latest contribution of this journal's Special Issues in the 21st conference entitled "Process Integration, Modelling and Optimisation for Energy Saving and Pollution Reduction (PRES)". This book is complemented with an editorial review to highlight the broader state-of-the-art development.

Doctoral Thesis / Dissertation from the year 2023 in the subject Pedagogy - Media Pedagogy, grade: Pass, University of Ulster, language: English, abstract: The perceptions of student teachers on Computer Assisted Language Learning (CALL) remain underexamined in literature. This mixed methods study explored the perceptions of Modern Language (ML) student teachers to CALL at commencement and completion of Initial Teacher Education (ITE) in 2020/21. These student teachers were in seven institutions across England, Scotland, Wales, and Northern Ireland. It was found that student teachers were less positive about CALL usage at the end of their ITE programmes. Self-

directed learning also overtook university education to become the primary channel of CALL knowledge acquisition for student teachers at ITE close. A total of thirty factors were found to influence the CALL behaviours of student teachers. The issue of workload was especially significant in follow-up focus groups. The CALL behaviours of student teachers also diverged from their initial expectations. However, these findings were not a one-size-fits-all for the whole student teacher population. There was evidence of local diversity between and within whole UK jurisdictions. Student teachers collectively suggested twelve recommendations to enhance CALL instruction in Postgraduate Certificate in Education (PGCE) and Postgraduate Diploma in Education (PGDE) courses. This investigation has produced a new and original theoretical framework that depicts the student teacher pathway to CALL adoption. The Student Teacher CAL Acceptance Model (STCAM) has been designed, tested, and refined over the course of my research project.
