A Critical Assessment Routledge
Late in the 1930s, the U.S. Department of Agriculture set up a national network of local organizations that joined farmers with public administrators, adult-educators, and social scientists. The aim was to localize and unify earlier New Deal programs concerning soil conservation,

farm production control, tenure security, and other reforms, and by 1941 some 200,000 farm people were involved. Even so, conservative anti-New Dealers killed the successful program the next year. This book reexamines the era's agricultural policy and tells the neglected story of the New Deal agrarian leaders and their visionary ideas about land, democratization, and progressive social change.

'A refreshing complement to more venerable textbooks. Indeed, being both reflective and accessible, it is arguably a better first resort for aspirant hacks' Times Higher Education Supplement 'It is written in a clear and user-friendly style, avoiding the legalistic language that can be a problem with so many law textbooks. Particularly well written are the case studies that Ursula Smartt explains in each chapter' - Writing Magazine Media Law for Journalists functions as both an introduction and a reference guide to the main legal issues facing journalists. It is intended as a course textbook for students, first and foremost. However, it is also intended to help keep journalists out of jail and on the right side of the law. The book presumes no prior legal knowledge, but covers all the relevant areas including: defamation, privacy, contempt of court, freedom of expression, and intellectual property. It also looks at the difference between the English and Scottish legal systems as they pertain to the media. This book will be essential reading for all students of journalism as well a welcome

guide to professional journalists.

The papers in this volume present a quite critical assessment of contingent valuation (CV). CV is a survey method that attempts to estimate individual values for economic goods by asking people hypothetical questions about their willingness to pay for such goods. In economics, CV has previously been studied almost solely by economists specializing in environmental economics. This book, however, reports research which is mainly from economists with specialities in economic theory, econometrics, and public finance, rather than from the more narrowly focused research of environmental economists. In addition, the research of specialists in psychology, market research, and litigation is included.

Risk assessment has become the backbone of Health and Safety management in the UK and elsewhere. Employers have a legal duty to prove that

risk assessments have been carried out and precautions have been implemented as far as (reasonably) practicable. Mike Bateman demystifies the risk assessment process and how it relates to UK legislation. He covers both the general techniques and the assessment of specific risks, such as hazardous substances (COSHH), noise, manual handling, DSE workstations, PPE, fire, asbestos and work at height. The book is designed to be user-friendly rather than overly legalistic or academic and tells the reader how to go about risk assessment, not just what the legislation requires. It contains numerous checklists, forms and worked examples for a variety of hazards and industries. This edition has been updated to take into account the impact of the following regulations on risk assessments: * Work at Height Regulations 2005 - full new chapter * Noise at Work Regulations 2006 * Regulatory Reform (Fire Safety) Order (RRFSO) 2006 * Revisions to Construction (Design and Management) (CDM) Regulations Mike Bateman runs his own health and safety consultancy and specialises in risk assessments. He is a corporate member of IOSH and a

registered health and safety practitioner. * Comprehensive coverage of risk assessments and how they relate to UK legislation * Practical approach with numerous checklists and forms - no need to re-invent the wheel! * Covers all the main hazards and industries Tolley's Basic Science and Practice of Gas Service Emerald Group Publishing 50 Studies Every Urologist Should Know presents key studies that have shaped the practice of urology. Selected using a rigorous methodology, the studies cover topics including reflux disease in paediatric urology, management of male erectile dysfunction and lower urinary tract symptoms, female urology and stone disease, the various forms of genitourinary cancer, and more. For each study, a concise summary is presented with an emphasis on the results and limitations of the study, and its implications for practice. An illustrative clinical case concludes each review, followed by brief information on other relevant studies. This book is a must-read for healthcare professionals in urology, as well as anyone who wants to learn more about the data behind clinical practice.

tumors, thyroid surgery, and base of tongue resection in patients with obstructive sleep apnea. The da Vinci robotic system, with its three-dimensional vision system, is also excellent for parapharyngeal, nasopharyngeal, and skull base resections.
