Greek Sculpture presents a chronological overview of the plastic and glyptic art forms in the ancient Greek world from the emergence of life-sized marble statuary at the end of the seventh century BC to the appropriation of Greek sculptural traditions by Rome in the first two centuries AD. Compares the evolution of Greek sculpture over the centuries to works of contemporaneous Mediterranean civilizations Emphasizes looking closely at the stylistic features of Greek sculpture, illustrating these observations where possible with original works rather than copies Places the remarkable progress of stylistic changes that took place in Greek sculpture within a broader social and historical context Facilitates an understanding of why Greek monuments look the way they do and what ideas they were capable of expressing Focuses on the most recent interpretations of

Greek sculptural works while considering the fragile and fragmentary evidence uncovered

Greek Architecture and Greek Sculpture Harvard University Press

This volume presents the proceedings of a conference hosted by the American School of Classical Studies, Athens and the Deutsches Archäologisches Institut, Athens in 2004. There are additional contributions from Patricia Butz, Robin Osborne, Katherine Schwab, Justin St. P. Walsh, Hilda Westervelt and Lorenz Winkler-Horacek. The contents are divided into four sections I. Structure and Ornament; II. Technique and Agency; III. Myth and Narrative and IV. Diffusion and Influence. Highlights include Robin Osbornes discussion of What you can do with a chariot but cant do with a satyr on a Greek temple; Ralf von den Hoff's consideration of the Athenian treasury at Delphi; and Katherine Schwab's presentation of New evidence for Parthenon east metope 14. The papers not only cover a great variety of issues in architectural sculpture but also present a range of case studies from all over the Greek world. The result is an important collection of current research.

This groundbreaking study traces the development of Roman architecture and its sculpture from the earliest days to the middle of the 5th century BCE. Existing narratives cast the Greeks as the progenitors of classical art and architecture or rely on historical sources dating centuries after the fact to establish the Roman context. Author John North Hopkins, however, allows the material and visual record to play the primary role in telling the story of Rome's origins, synthesizing important new evidence from recent excavations. Hopkins's detailed account of urban growth and artistic, political, and social exchange establishes strong parallels with communities across the Mediterranean. From the late 7th century, Romans looked to increasingly distant lands for shifts in artistic production. By the end of the archaic period they were building temples that would outstrip the monumentality of even those on the Greek mainland. The book's extensive illustrations feature new reconstructions, allowing readers a rare visual exploration of this fragmentary evidence.

Greek Sanctuaries and Temple Architecture Cambridge University Press

Assuming no prior knowledge, this book introduces the reader to a selection of sites and temples,

exploring them in detail and explaining all technical terms along the way. Intended for college-level students and the interested general reader, this book aims to equip the student of Greek architecture for further study, and can also serve as a handbook for visitors to the sanctuaries. The book covers many of the most popular sites, including Delphi, Olympia and the Athenian Acropolis. In this second edition there are new chapters on Western Greece, covering the site of Paestum in Magna Graecia (South Italy), and the unique temple of Olympian Zeus in Acragas, Sicily. The book also offers a concise account of the evolution of Greek architecture, explores aesthetic ideas underlying Greek architectural design, and gives consideration to specific buildings in their social and religious context. This second edition has expanded the discussion of the most important temples and lays emphasis on architectural sculpture as part of the meaning of the whole building. Along with an updated bibliography and a glossary, an abundance of plans, photos and drawings helps clarify the text.

The Parthenon sculptures in the British Museum are unrivaled examples of classical Greek art, an inspiration to artists and writers since their creation in the fifth century bce. A superb visual introduction to these wonders of antiquity, this book offers a photographic tour of the most famous of the surviving sculptures from ancient Greece, viewed within their cultural and art-historical context. Ian Jenkins offers an account of the history of the Parthenon and its architectural refinements. He introduces the sculptures as architecture--pediments, metopes, Ionic frieze--and provides an overview of their subject matter and possible meaning for the people of ancient Athens. Accompanying photographs focus on the pediment sculptures that filled the triangular gables at each end of the temple; the metopes that crowned the architrave surmounting the outer columns; and the frieze that ran around the four sides of the building, inside the colonnade. Comparative images, showing the sculptures in full and fine detail, bring out particular features of design and help to contrast Greek ideas with those of other cultures. The book further reflects on how, over 2,500 years, the cultural identity of the Parthenon sculptures has changed. In particular, Jenkins expands on the irony of our intimate knowledge and appreciation of the sculptures--a relationship far more intense than that experienced by their ancient, intended spectators--as they have been transformed from architectural ornaments into objects of art.

Hellenomania, the second volume in the MANIA series, presents a wide-ranging, multi-disciplinary exploration of the modern reception of ancient Greek material culture in cultural practices ranging from literature to architecture, stage and costume design, painting, sculpture, cinema, and the

performing arts. It examines both canonical and less familiar responses to both real and imagined Greek antiquities from the seventeenth century to the present, across various national contexts. Encompassing examples from Inigo Jones to the contemporary art exhibition documenta 14, and from Thessaloniki and Delphi to Nashville, the contributions examine attempted reconstructions of an 'authentic' ancient Greece alongside imaginative and utopian efforts to revive the Greek spirit using modern technologies, new media, and experimental practices of the body. Also explored are the political resonances of Hellenomaniac fascinations, and tensions within them between the ideal and the real, the past, present, and future. Part I examines the sources and derivations of Hellenomania from the Baroque and pre-Romantic periods to the early twentieth century. While covering more canonical material than the following sections, it also casts spotlights on less familiar figures and sets the scene for the illustrations of successive waves of Hellenomania explored in subsequent chapters. Part II focuses on responses, uses, and appropriations of ancient Greek material culture in the built environment--mostly architecture--but also extends to painting and even gymnastics; it examines in particular how a certain idealisation of ancient Greek architecture affected its modern applications. Part III explores challenges to the idealisation of ancient Greece, through the transformative power of colour, movement, and of reliving the past in the present human body, especially female. Part IV looks at how the fascination with the material culture of ancient Greece can move beyond the obsession with Greece and Greekness.

Its Spirit and Principles Routledge

Much of our understanding of the origins and early development of the Greek architectural order is based on the writings of ancient authors, such as Vitruvius, and those of modern interpreters. Traditionally, the archaeological evidence has been viewed secondarily and often made to fit within a literary context, despite contradictions that occur. Barbara Barletta's study examines both forms of evidence in an effort to reconcile the two sources, as well as to offer a coherent reconstruction of the origins and early development of the Greek architectural orders. Beginning with the pre-canonical material, she demonstrates that the relatively late emergence of the Doric and Ionic orders arose from contributions of separate regions of the Greek world, rather than a single center. Barletta's reinterpretations of the evidence also assigns greater importance to the often overlooked contributions of Western Greece and the Cycladic Islands.
