This report presents the results of a study of the problem of water supply and waste disposal in the three-State, six-county region in which the Tocks Island Reservoir and the Delaware Water Gap National Recreation Area are being developed. Peak summer populations are projected over a 50-year period and utilities systems alternatives which could accommodate such projected

growth are presented in the report. Water supplies in the region are seen as adequate to meet future demands, with heavy emphasis on development of groundwater resources. Five alternative sewerage plans, ranging in degree of regionalization from 116 local treatment systems to a single system for the entire region, are outlined including detailed cost estimates.

Preservation of water quality in the region is a primary objective of the study. *Orientation in Water Supply and Pollution Control* Cram101 For upper-division undergraduate or beginning graduate courses in civil and environmental engineering. Water Supply and Pollution Control
 Prentice Hall
 For introductory courses in Environmental Technology, Water Supply

and Pollution Control, Environmental Quality Control, Environmental and Sanitary Design, and Water and Wastewater Technology. Known for its wide range of topics and easy-to-read style, this book offers a practical introduction to water supply, waste management, and pollution control. Because of the wide scope of the subject matter, it includes special primer sections and a

basic review of math and unit conversion. This edition continues its emphasis on illustration-incorporating hundreds of example problems, diagrams, and photographs-and includes more information on alternative waste water collection systems, onsite waste water disposal, the sustainability of groundwater resources and more!
