Groomed for a place at a Big Name School since their obsessed,

status-conscious helicopter parents passed out cigars at the Stockstill General Hospital Neonatal Unit, the privileged students of Pembrocton College Preparatory are ratcheting up the stakes in the race to get into the nation's most prestigious colleges. The PCP juniors are gloating, jubilant at the rumor that the valedictorian presumptive has received a B on her report card, a grade that will relegate her to in-state hell. Her heir apparent, a three-generation Yale legacy, is the sole mourner at the demise of her future—if only because her thoughtless academic lapse is going to derail his plans to attend MIT. Across town, in the graffiti-covered halls of

Stockstill High School, the students slink to class, praying that they arrive without a knife wound—and dream of ivy-covered walls. And with the help of a take-no-prisoners principal and an enterprising parent, the students at SHS dare to encroach shamelessly on territory normally reserved for their wealthy private school rivals. Join the fray as a memorable cast of characters engages in the latest rage in extracurricular activities: college admissions as a blood sport. Laugh out loud funny, The Applicants lampoons the heights we scale—and the depths to which we sink—to get into the “right” college. ? *iPhone Game Development* Ruthanne Reid

Almost 15 years ago, in *The World is Flat*, Thomas Friedman popularized the latest wave of globalization as a world of giant corporate supply chains that tripled world trade between 1990 and 2010. Major corporations such as Apple, Dell, and GE offshored manufacturing to low-cost economies; China became the world's factory, mass-producing and exporting computers and gadgets to Western shoppers. This paradigm of globalization has dominated global trade policy-making and guided hundreds of billions of dollars in business investments and development spending for almost three decades. But we are now on the cusp of

a new era. *Revolutionizing World Trade* argues that technologies such as ecommerce, 3D printing, 5G, the Cloud, blockchain, and artificial intelligence are revolutionizing the economics of trade and global production, empowering businesses of all sizes to make, move, and market products and services worldwide and with greater ease than ever before. The twin forces of digitization and trade are changing the patterns, players, politics, and possibilities of world trade, and can reinvigorate global productivity growth. However, new policy challenges and old regulatory frameworks are stifling the promise of this most dynamic, prosperous, and

inclusive wave of globalization yet. This book uses new empirical evidence and policy experiences to examine the clash between emerging possibilities in world trade and outdated policies and institutions, offering several policy recommendations for navigating these obstacles to catalyze growth and development around the world.

Entering New Markets How to win in the world's largest retail market. China is the largest e-commerce market in the world and the most digital of the major economies. At the same time, many international brands are intimidated by the China market given their lack of familiarity and the significant cultural and language differences. The Smart Business Guide helps bridge this gap by providing a how-to approach to the China e-commerce ecosystem. E-commerce provides a powerful tool for brands to reach consumers and offers the predictability and statistical feedback that dramatically reduces the costs of a brand to enter the China market. A quick,

punchy read, *The Smart Business Guide* is a useful book for consumer brands, retailers, and entrepreneurs. It covers critical areas such as: -- How any brand can be a pure-play e-commerce brand in China -- How Chinese consumers are different from U.S. consumers -- The main platforms and social media channels -- Case studies of success and failure in China -- How to deal with market entry challenges, trademark registration, and product approval -- How to compete and win in the most challenging--and most promising--retail market in the world

At approximately 09.00hrs on the 15th June 1996, an unassuming white lorry was parked on Corporation Street in the city centre of Manchester, England; it contained over 3000 pounds of high explosive. At 11.15hrs the same day, Manchester witnessed the detonation of the largest device on the British mainland since the second World War ... The Irish Republican Army claimed responsibility for the attack. Based around actual events, LETTERBOX tells the

story of Liam Connor, an ordinary boy brought up in Manchester by a seemingly ordinary family. He goes to the local school, loves football and has a best friend called Sean ... an ordinary life!
Unbeknown to Liam, his father, Michael Connor, harbors a dark historic secret, following a life a lot less ordinary ... as a furtive, yet high ranking soldier within the IRA. As a result of extraordinary circumstances, Liam's innocent and carefree world is shattered when he is exposed to the truth about his family's heritage and then learns about the tragic death of his father at the hands of the SAS. Consumed with both hate and the need to seek

retribution, Liam is taken to Ireland where he is intensively trained to become a highly skilled and efficient soldier within the Irish Republican Army ... He is 16 years old! Some years later, following the drug-induced death of his beloved sister, Liam is given the opportunity to exact his revenge on those he believed should truly be blamed for the tragedies in his life ... The British Government! Thus, on the 15th June 1996, it was Liam's responsibility to drive the bomb laden lorry into the unsuspecting city of Manchester and let the voice of the IRA be clearly heard ... And listened to!!

The Amazing Book of No was just announced as a Winner of the 2015 Readers Favorite Award for K-3rd grade readers. "The Amazing Book of No" is a deceptively simple story that will teach your 3-7 year old how

to accept the word "no" when you say it, and why they shouldn't argue. The story is about two moms and their children. One mom says "no" all the time, while the other says "yes" to everything. It is cute and engaging all in one, and designed not to take up too much of a parents valuable time, with the idea being to try and imprint wholesome ideals while kids are young. Reading this just a few times to your boy or girl at bedtime will ensure you don't have any misunderstandings with your children about the word "NO" as they grow older. These are the proceedings of CHES 2001, the third Workshop on Cryptographic Hardware and Embedded Systems. The first two CHES Workshops were held in Massachusetts, and this was the first Workshop to be held in Europe. There was a large number of submissions this year, and in response the technical program was extended to 2 1/2

days. As is evident by the papers in these proceedings, many excellent submissions were made. Selecting the papers for this year's CHES was not an easy task, and were regrettable that we had to reject several very interesting papers due to the lack of time. There were 66 submitted contributions this year, of which 31, or 47%, were selected for presentation. If we look at the number of submitted papers at CHES '99 (42 papers) and CHES 2001 (51 papers), we observe a steady increase. We interpret this as a continuing need for a workshop series which combines theory and practice for integrating strong security features into modern communications and computer applications.

In addition to the submitted contributions, Ross Anderson from Cambridge University, UK, and Adi Shamir from The Weizmann Institute, Israel, gave invited talks. As in previous years, the focus of the workshop is on all aspects of cryptographic hardware and embedded system design. Of special interest were contributions that describe new methods for efficient hardware implementations and high-speed software for embedded systems, e.g., smart cards, microprocessors, DSPs, etc. CHES also continues to be an important forum for new theoretical and practical findings in important and growing fields of side-channel attacks.
