Originally published in German in 1923, this English edition was first published in 1931. From the translators preface:

"Experimentelle Psychologie is characterized by an excellent summarizing of the most recent experimental data and by a spirit of fairness which it exhibits in organizing facts under general theoretical principles. Besides informing the reader, it stimulates him by critical remarks and suggestions for further thinking and experimentation." Today it can be read and enjoyed in its historical context.

[Histories of Dreams and Dreaming](#) ABC-CLIO

In the late nineteenth century, dreams became the subject of

scientific study for the first time, after thousands of years of being considered a primarily spiritual phenomenon. Before Freud and the rise of psychoanalytic interpretation as the dominant mode of studying dreams, an international group of physicians, physiologists, and psychiatrists pioneered scientific models of dreaming. Collecting data from interviews, structured observation, surveys, and their own dream diaries, these scholars produced a large body of early research on the sleeping brain in the late nineteenth and early twentieth centuries. This book uncovers an array of case studies from this overlooked period of dream scholarship. With contributors working across the disciplines of psychology, history, literature, and cultural studies, it highlights continuities and ruptures in the history of scientific inquiry into dreams.

Cinematic Reflections on The Legacy of the Holocaust Skippy Creek

A spellbinding look at the philosophical and moral implications of animal dreaming. Are humans the only dreamers on Earth? What goes on in the minds of animals when they sleep? When *Animals Dream* brings together behavioral and neuroscientific research on animal sleep with philosophical theories of dreaming. It shows that dreams provide an invaluable window into the cognitive and emotional lives of nonhuman animals, giving us access to a seemingly inaccessible realm of animal experience. David Peña-Guzmán uncovers evidence of animal dreaming throughout the scientific literature, suggesting that many animals run "reality simulations" while asleep, with a dream-ego moving through a dynamic and coherent dreamscape. He builds a convincing case for animals as conscious beings and examines the thorny scientific, philosophical, and ethical questions it raises. Once we accept that animals dream, we incur a host of moral obligations and have no choice but to rethink our views about who animals are and the interior lives they lead. A mesmerizing journey into the otherworldly domain of nonhuman consciousness, *When Animals Dream* carries profound implications for contemporary debates about animal cognition, animal ethics, and animal rights,

challenging us to regard animals as beings who matter, and for whom things matter.

Road Movies and the Construction of Self Penguin

This book aims to present a study on the actuality and empirical value of Freud's dream theory, even if through the analysis of a specific part of it - the hypotheses about children's dreams. It provides a systematic description of Freud's observations on child dreaming and presents the results obtained from four empirical studies on children's dreams that the author conducted during the span of a decade. These studies (two conducted in school settings, one in a home setting, and one based on a questionnaire completed by parents) allow an empirical judgment on Freud's main hypotheses on child dreaming: the hypotheses on the formal aspect of children's dreams, the relationship between dream bizarreness and development of the superego functions, and the issue of wish-fulfillment dreams. The author concludes that it is possible to test empirically Freud's hypothesis on the early forms of dreaming and that this test is not irrelevant for an empirical judgment of certain more general statements of Freud's dream theory (e.g. the dream censorship hypothesis).

Psychology and Psychophysiology Rowman & Littlefield

An international group of psychoanalysts and film scholars address the enduring emotional legacy of the Holocaust in *Cinematic Reflections on the Legacy of the Holocaust: Psychoanalytic Perspectives*. Particular focus is given to how second and third generation survivors have explored and confronted the psychic reverberations of Holocaust trauma in cinema. This book focuses on how film is particularly suited to depict Holocaust experiences with vividness and immediacy. The similarity of moving images and sound to our dream experience allows access to unconscious processing. Film has the potential to reveal the vast panorama of Holocaust history as well as its intrapsychic reverberations. Yet despite the recent prominence of Holocaust films, documentaries, and TV series as well as scholarly books and memoirs, these works lack a psychoanalytic optic that elucidates themes such as the repetition compulsion, survival guilt, disturbances in identity, and disruption of mourning that are underlying leitmotifs. *Cinematic Reflections on the Legacy of the Holocaust* will be of great interest to psychoanalysts and therapists as well as to scholars in trauma, film, and Jewish studies. It is also of interest to those concerned with the prevention of genocide and mass atrocities and their long-term effects.

The compelling story of a forbidden marriage, a baby lost, and a love triangle gone horribly wrong, *Love Child* centers on Bill, a South African woman whose life has been defined by the apartheid-era, class-riven society in which she lives. Under pressure to make her will, Bill is forced to think about the momentous events and decisions that have made her an extremely wealthy if somewhat disillusioned woman. To whom should she leave her fortune? As Bill relives her past, we learn that this is a simple question with a complicated answer. In elegant, sensual, and nuanced prose, Kohler skillfully explores the space between our dreams and our reality, between our hopes and our disappointments.
