An expert communicator,
Jack McAfghan writes the
memoirs of his four-
legged life as a mixed-
breed Afghan Hound.
From obedience and
agility training to hospice
work, Jack and his master

learn their lessons side by
side, inevitably applying
what they have learned as
their own lives unfold. It is
a love story that can be
used as an informal study
guide for those who are in
the process of training a
dog, learning to love, or
grieving over the loss of a
friend. Jack presents with a
wise, open and informed
mind. He speaks firsthand
about the psychological
aspects of canine
behavior as he opens the

reader's mind to the
possibilities that exist in
life and after death. He
reminds us that the way
we think can change the
course of our lives. This
story will touch everyone
who has ever loved. It
matters not if they have
four legs or two. Jack
leads us to a higher love
as he expands our
tolerance and compassion
for all of humanity. He
extends himself to every
creature of the earth,

every human on the planet, every spirit in the universe and most of all, to the bona fide Master over all.

We are what we eat: this aphorism contains a profound truth about civilization, one that has played out on the world historical stage over many millennia of human endeavor. Using the colorful diaries of a sixteenth-century merchant as a narrative guide, *Empires of Food* vividly chronicles the fate

of people and societies for the past twelve thousand years through the foods they grew, hunted, traded, and ate—and gives us fascinating, and devastating, insights into what to expect in years to come. In energetic prose, agricultural expert Evan D. G. Fraser and journalist Andrew Rimas tell gripping stories that capture the flavor of places as disparate as ancient Mesopotamia and imperial Britain, taking us from the first city in the once-thriving Fertile Crescent to today's

overworked breadbaskets and rice bowls in the United States and China, showing just what food has meant to humanity. Cities, culture, art, government, and religion are founded on the creation and exchange of food surpluses, complex societies built by shipping corn and wheat and rice up rivers and into the stewpots of history's generations. But eventually, inevitably, the crops fail, the fields erode, or the temperature drops, and the center of power shifts. Cultures descend

into dark ages of poverty, famine, and war. It happened at the end of the Roman Empire, when slave plantations overworked Europe's and Egypt's soil and drained its vigor. It happened to the Mayans, who abandoned their great cities during centuries of drought. It happened in the fourteenth century, when medieval societies crashed in famine and plague, and again in the nineteenth century, when catastrophic colonial schemes plunged half the world into a poverty from

which it has never recovered. And today, even though we live in an age of astounding agricultural productivity and genetically modified crops, our food supplies are once again in peril. *Empires of Food* brilliantly recounts the history of cyclic consumption, but it is also the story of the future; of, for example, how a shrimp boat hauling up an empty net in the Mekong Delta could spark a riot in the Caribbean. It tells what happens when a culture or nation runs out of food—and shows us

the face of the world turned hungry. The authors argue that neither local food movements nor free market economists will stave off the next crash, and they propose their own solutions. A fascinating, fresh history told through the prism of the dining table, *Empires of Food* offers a grand scope and a provocative analysis of the world today, indispensable in this time of global warming and food crises. *Writings of the Supreme Court's Wittiest, Most Outspoken Justice* Simon

Individuals with disabilities, chronic conditions, and functional impairments need a range of services and supports to keep living independently. However, there often is not a strong link between medical care provided in the home and the necessary social services and supports for independent living. Home health agencies and others are rising to the challenges of meeting the needs and demands of these populations to stay at home by exploring

alternative models of care and payment approaches, the best use of their workforces, and technologies that can enhance independent living. All of these challenges and opportunities lead to the consideration of how home health care fits into the future health care system overall. On September 30 and October 1, 2014, the Institute of Medicine and the National Research Council convened a public workshop on the future of home health care. The

workshop brought together a spectrum of public and private stakeholders and thought leaders to improve understanding of the current role of Medicare home health care in supporting aging in place and in helping high-risk, chronically ill, and disabled Americans receive health care in their communities. Through presentations and discussion, participants explored the evolving role of Medicare home health care in caring for Americans in

the future, including how to integrate Medicare home health care into new models for the delivery of care and the future health care marketplace. The workshop also considered the key policy reforms and investments in workforces, technologies, and research needed to leverage the value of home health care to support older Americans, and research priorities that can help clarify the value of home health care. This summary captures important points

raised by the individual speakers and workshop participants.

"As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were

made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket. *Korean* Harvard Business Review Press

Intended as the primary text for introductory courses on medical anthropology, this book integrates human biological data relevant to health and disease with both evolutionary theory

and the social environments that more often than not produce major challenges to health and survival. Because students who take this fastest-growing anthropology course come from a variety of disciplines (anthropology, biology, especially pre-med students, and health sciences, especially), the text does not assume anything beyond a basic high-school level familiarity with human biology and anthropology. The authors first present basic biological

information on a particular health condition and then expand their analysis to include evolutionary, historical, and cross-cultural perspectives. Among the topics covered are nutrition, infectious disease, stress, reproductive health, behavioral disease, aging, race/racism and health, mental health, and healers and healing.

Brilliant. Colorful.

Visionary. Tenacious.

Witty. Since his

appointment to the Supreme Court in 1986,

Associate Justice Antonin Scalia has been described

as all of these things and for good reason. He is perhaps the best-known justice on the Supreme Court today and certainly the most controversial.

Yet most Americans have probably not read even one of his several hundred Supreme Court opinions. In *Scalia Dissents*, Kevin Ring, former counsel to the U.S. Senate's Constitution Subcommittee, lets Justice Scalia speak for himself.

This volume—the first of its kind— showcases the quotable justice's take on many of today's most

contentious constitutional debates. *Scalia*

Dissents contains over a dozen of the justice's most compelling and controversial opinions.

Ring also provides helpful background on the opinions and a primer on Justice Scalia's judicial philosophy. *Scalia Dissents* is the perfect book for readers who love scintillating prose and penetrating insight on the most important constitutional issues of our time.

THE following translation was undertaken from a desire to lay before the English-speaking people the full treasury of epical beauty, folklore, and mythology comprised in

The Kalevala (the Land of Heroes, the national epic of the Finns.) The Kalevala describes Finnish nature very minutely and very beautifully. Grimm says that no poem is to be compared with it in this respect. A deeper and more esoteric meaning of the Kalevala, however, points to a contest between Light and Darkness. The numerous myths of the poem are likewise full of significance and beauty, and the Kalevala should be read between the lines, in order that the full

meaning of this great epic may be comprehended. The whole poem is replete with the most fascinating folk-lore about the mysteries of nature, the origin of things, the enigmas of human tears, and, true to the character of a national epic, it represents not only the poetry, but the entire wisdom and accumulated experience of a nation. One of the most notable characteristics of the Finnish mythology is the interdependence among the gods. The Finnish deities, like the ancient

gods of Italy and Greece, are generally represented in pairs. They have their individual abodes and are surrounded by their respective families. The Sun and the Moon each have a consort, and sons and daughters. Only two sons of Paeivae appear in The Kalevala, one comes to aid of Wainamoinen in his efforts to destroy the mystic Fire-fish, by throwing from the heavens to the girdle of the hero, a "magic knife, silver-edged, and golden-handled;" the other son, Panu, the Fire-child,

brings back to Kalevala the fire that had been stolen by Louhi, the wicked hostess of Pohyola. 10% of the net profit from the sale of this book will be donated to charities.
