Better than swapping ideas with the owners of the boat in the

next marina berth, this handy book will be a godsend to all boaters looking for simple solutions to everyday problems. Keeping a boat (whether sail or power) in a damp, corrosive environment (i.e. water) leads to all sorts of issues: rust, mildew, UV degradation, crazing, bad smells, staining, and worse. In this fantastic resource of quick, easy and cost-effective solutions to boat maintenance problems, the author shares tried and tested ideas to protect and improve your boat. From cleaning off rust marks from aluminium stanchions to dislodging bird droppings on deck and preventing dank cabin odours, it's all here; quick and easy tips to protect your hull, deck, windscreen, shorelines, engine, electrics, bilges, freshwater system, sails, rigging, winches, electronics, heads, furniture, windows, carpets, dinghies and tenders. The author also looks at new products on the market, new protectants and environmentally friendly cleaners, tackling the problems of ethanol now introduced into fuel, lower emission engines, sealed batteries, as well as new cures for

odour removal and mildew prevention. There's nothing worse than getting to the boat and spending the day trying to cure a simple problem. This book ensures you can spend most of that time out on the water instead.

This book details the efforts to build a large naval vessel capable of traveling at one hundred knots. It is the first book to summarize this extensive work from historical and technical perspectives. It explores the unique principles and challenges in the design of high-speed marine craft. This volume explores different hull form concepts, requiring an understanding of the four forces affecting the lift and the drag of the craft. The four forces covered are hydrostatic (buoyancy), hydro-dynamic, aerostatic, and aerodynamic. This text will appeal to naval researchers, architects, graduate students and historians, as well as others generally interested in naval architecture and propulsion.

As U.S. and Canadian automakers and dealers face bankruptcy and Toyota battles unprecedented quality-control problems, Lemon-Aid guides steer the confused and anxious buyer through the economic meltdown unlike any other car-and-truck books on the market. Phil Edmonston, Canada's automotive "Dr. Phil" for more than 40 years, pulls no punches. In this all-new guide he says: Chrysler's days are numbered with the dubious help of Fiat. Electric cars and ethanol power are PR gimmicks. Diesel and natural gas are the future. Be wary of "zombie" vehicles: Jaguar, Land Rover, Saab, and Volvo. Mercedes-Benz – rich cars, poor quality. There's only one Saturn you should buy. Toyota – enough apologies: "when you mess up, 'fess up."

There isn't another place in the world that can match Detroit's

automotive history. For nearly a century, what was conceived, designed, produced, and marketed from this town ruled the roads. So it only stands to reason that the Motor City is likely to host some of the country's greatest collector garages. From the personal home of the man who put America on wheels to the posh residences of current automotive icons such as Bob Lutz, Motor City Dream Garages takes readers on a guided tour of 20-plus of Motown's most interesting garages. Going beyond even these fantastic garagemahals, this book also takes readers inside select company garages for exclusive looks at the unique and important collections amassed by companies such as General Motors and Roush Industries (parent company to Roush Racing,

owned by Jack Roush). If you like both garages and the beautiful machines within, this book is for you!
