contributed research articles and reviews addresses current
developments in the calibration of analytical methods and

techniques and their subsequent validation. Section 1,
"Introduction," contains the Introductory Chapter, a broad
overview of analytical calibration and validation, and a brief
synopsis of the following chapters. Section 2 "Calibration
Approaches" presents five chapters covering calibration schemes
for some modern analytical methods and techniques. The last
chapter in this section provides a segue into Section 3,
"Validation Approaches," which contains two chapters on
validation procedures and parameters. This book is a valuable
source of scientific information for anyone interested in analytical
calibration and validation.

Pharmaceutical analysis determines the purity, concentration,
active compounds, shelf life, rate of absorption in the body,
identity, stability, rate of release etc. of a drug. Testing a

pharmaceutical product involves a variety of chemical, physical and microbiological analyses. It is reckoned that over £10 billion is spent annually in the UK alone on pharmaceutical analysis, and the analytical processes described in this book are used in industries as diverse as food, beverages, cosmetics, detergents, metals, paints, water, agrochemicals, biotechnological products and pharmaceuticals. This is the key textbook in pharmaceutical analysis, now revised and updated for its fourth edition. Worked calculation examples Self-assessment Additional problems (self tests) Practical boxes Key points boxes New chapter on Biotech products. New chapter on electrochemical methods in diagnostics. Greatly extended chapter on molecular emission spectroscopy to accommodate developments and innovations in the area. Now on StudentConsult

The present book "Pharmaceutical Chemistry Inorganic, Vol I has been written according to the revised syllabus framed by the Pharmacy council of India as per Education Regulations 1991. In this book, subject matter has been recognised incorporating applicationwise classification (Therapeutic, pharmaceutical etc.) rather than the traditional chemical classification. More emphasis has been further laid by explaining the medical and pharmaceutical terms and to what extent it is justifiable to classify a compound under any of the categories. Inevitably, students will find repetition for some compou.
