Extension worker is the key person in transfer of technology to social system. The social system is complex in nature. The farmers are differing in their sociological and cultural aspects namely settlement pattern, class, customs, conventions, rituals, norms, values, mores, taboos etc. The social settings and farmers sociological aspects are differ from village to village and region to region. Farmers are having different

opinion, attitude and perception towards the technology and technology transfer system based on their past experience. Studying the farmer's sociological and psychological characteristics is very much needed in technology transfer process. Technology transfer programme / plan should be based on the sociological and psychological aspects of farmers. This book deals with the basic sociological and psychological aspects of rural people and will be useful for undergraduate students of agriculture and allied subjects.

Foot and mouth disease and BSE have both had a devastating impact on rural society. Alongside these devastating developments, the rise of the organic food movement has helped to revitalize an already politicized rural population. From fox-hunting to farming, the vigour with which rural activities and living are defended overturns received notions of a sleepy and complacent countryside. Over the years "rural life" has been defined, redefined and eventually fallen out of fashion as a sociological concept--in contrast to urban studies, which has flourished. This much-needed reappraisal calls for its reinterpretation in light of the profound changes affecting the countryside. First providing an overview of rural sociology, Hillyard goes on to offer contemporary case studies that clearly demonstrate the need for a reinvigorated rural sociology. Tackling a range of contentious issues--from fox-hunting to organic farming--this

book offers a new model for rural sociology and reassesses its role in contemporary society.

Elements of Rural Sociology Berg
With increasing awareness of the limits that natural resource reserves and environmental concerns impose on economic growth, rural sociologists have developed new ways of looking at the relationship between man and his environment. This volume surveys changing sociological views of that

relationship and explores a holistic, cooperative model of human/nature interaction that reflects the needs of the post-industrial age. In their introduction Field and Burch review significant landmarks in natural resource sociology and comment on some of the underlying aims of rural sociology. The remaining chapters focus on three distinct periods during which rural sociologists have sought to examine man's relationship and adaptation to the environment.
