These new print editions are the abridged companions to Radiology Simplified, the first resident-to-resident guide to the new ABR Core Exam designed specifically for the iPhone, iPad and Mac. Our hope is that the hundreds of R3 residents who study from our iBooks version this year will empower themselves with the print editions to unplug from

the Internet during some of their study time. Because the print versions are abridged, we've left content that works well in electronic medium ? cine clips, embedded presentations, web links - exclusively to the iBooks version. We've also tried where possible to remind you when there's more content to explore in the electronic version. The print editions integrate corrections from hundreds of residents, which are also incorporated into the iBooks version on a

continual basis through updates. Because we'll only be updating the print version once per year, the iBooks version will continue to be the most up-to-date version throughout the academic year. Core Cases 2016-2017, Volume 1. Our take on the best Core-focused cases in these topic areas: breast Imaging, cardiac Imaging, gastrointestinal, genitourinary Imaging, and musculoskeletal. Excludes cine content and web links. Core Cases 2016-2017, Volume 2. Our

take on the best Core-focused cases in these topic areas: neuroradiology, nuclear radiology, pediatric radiology, thoracic imaging, ultrasound, vascular and interventional radiology. Excludes cine content and web links. Core Physics 2016-2017. The abridged need-to-know Core physics coverage. Excludes web links and integrated presentations. **Crack the Core Exam - Springer Nature** This publication is aimed at students and teachers

The Essential Physics of Medical Imaging

Createspace Independent Publishing Platform

This study guide will be a reliable support and easy-to-use source of information for students in the fields of dosimetry, physics, radiation oncology, and therapy as they progress through the educational levels in preparation for board

examinations. The theoretical and practical knowledge gained by students on previous courses or in clinical settings is reinforced by means of almost 1200 questions and accompanying detailed analytical answers. In order to cater for the needs of all students, the questions are arranged according to three levels of difficulty. The level 1 questions are mainly intended for those hoping to pass the Medical Dosimetrist Certification Board (MDCB) exam but

will also be beneficial for Medical Physics candidates taking written exams and for Radiation Oncology residents. The level II questions are in general clinically related and will be relevant for any student, while the level III questions are advanced and are especially suitable for American Board of Radiology candidates or those taking equivalent exams elsewhere in the world. The study guide is broken down into different subject areas, with provision of multiple

questions and answers on each subject. In addition, the mathematical and physics questions include brief explanations of how the student can solve each problem. At the end of the guide, three practice tests are included with the same number of questions as are found in the MDCB exam. These tests will help students to test their knowledge and improve their test-taking speed.

 This book outlines the principles and practices of arts-related inquiry and provides both suggestions about conducting research in the field as well as case study examples. The ideas presented here have emerged from the authors' own experiences of undertaking arts-related research and the challenges of implementing these

approaches. The book therefore draws on personal research, practice and experience to address the concerns academics increasingly appear to be voicing about developing the scholarship and practice of arts-related research. There is a need for greater attention to, and clarity on, issues of theoretical positioning, methodology and methods when conducting robust and reputable arts-related research, which this book provides. *Absolute Therapeutic*

*Medical Physics Review*

Lippincott Williams & Wilkins

This book presents the first comprehensive introduction to arts-based research (ABR) practices, which scholars in multiple disciplines are fruitfully using to reveal information and represent experiences that traditional methods cannot capture. Each of the six major ABR genres—narrative inquiry, poetry, music, performance,

dance, and visual art—is covered in chapters that introduce key concepts and tools and present an exemplary research article by a leading ABR practitioner. Patricia Leavy discusses the kinds of research questions these innovative approaches can address and offers practical guidance for applying them in all phases of a research project, from design and data collection

to analysis, interpretation, representation, and evaluation. Chapters include checklists to guide methodological decision making, discussion questions, and recommended print and online resources.
