Here's a rich pictorial review of normal and abnormal human prenatal development. For each body system or region, you'll find a brief description of the developmental plan, with key concepts and terminology, followed by discussions of histological principles, the classification of congenital defects, and basic cellular, molecular, and genetic concepts. An emphasis on morphological patterns in the embryo and fetus makes it easy to understand the structure and function of the adult body and the embryonic basis of birth defects. Summary tables and terminology sections at the end of each chapter, plus an appendix with all major congenital defects and their embryonic basis, make it easy to review course material and prepare for the USMLE.

Post-mortem computed tomography (PMCT) is increasingly used in forensic pathology practice in many jurisdictions. Such imaging has expanded the capacity to evaluate skeletal trauma improving the visualisation, documentation and presentation of forensic findings. Typically when deceased persons are located and exhibit evidence of trauma, forensic pathologist, anthropologists and radiologists base their interpretations of the mechanism of trauma on their experience and understanding of the biomechanics of fractures as well as recognisable patterns of injury. In order to augment this process, An Atlas of Forensic

Skeletal Trauma presents a range of de-identified adult and child skeletal trauma cases that occur in medico-legal contexts where the cause of death and mechanism of trauma are recorded. An Atlas of Forensic Skeletal Trauma includes comprehensive photographs and PMCT images as well as descriptive text. - Presents a valuable guide to the interpretation of skeletal trauma for practitioners and students of forensic anthropology, pathology and radiology - Provides coverage of skeletal trauma cases resulting from high and low velocity projectiles, low energy blunt force (e.g., assaults involving various implements, hangings, strangulations, falls), high energy blunt force (e.g., motor vehicle and aviation incidents), and more - Includes case studies with written and visual descriptions, discussions and up-to-date literature review
