"Modern agriculture and food-preservation methods have done serious damage to the human diet. The detrimental effects on the human body caused by acidic wastes from processed food and chemical additives are myriad." -- Back cover.

Invested Stayers Arcadia Publishing

A scientifically based herbal and nutritional program to master stress, improve energy, prevent degenerative disease, and age gracefully • Explains how adaptogenic herbs work at the cellular level to enhance energy production and subdue the pro-

inflammatory state behind degenerative disease • Explores the author's custom adaptogenic blends for the immune system, cardiovascular health, thyroid function, brain health, and cancer treatment support • Provides more than 60 monographs on herbs and nutritional compounds based on more than 25 years of clinical practice with thousands of patients Weaving together the ancient wisdom of herbalism and the most up-to-date scientific research on cancer, aging, and nutrition, renowned medical herbalist and clinical nutritionist Donald Yance reveals how to master stress, improve energy levels, prevent degenerative disease, and age gracefully with the elite herbs known as adaptogens. Yance's holistic approach, called the Eclectic Triphasic Medical System (ETMS), is based on extensive scientific research, more than 25 years of clinical practice, and excellent

results with thousands of patients. It centers on four interconnected groups of health tools: botanical formulations, nutritional supplements, diet, and lifestyle. Defining three categories for adaptogenic herbs, he explains how formulations should combine herbs from each category to create a synergistic effect. He provides more than 60 monographs on herbs and nutritional compounds as well as custom combinations to revitalize the immune system, build cardiovascular health, protect brain function, manage weight, and support cancer treatment. He explains the interplay of endocrine health, the hypothalamic-pituitary-adrenal (HPA) axis, thyroid function, and stress in the aging process and reveals how adaptogenic treatment begins at the cellular level with the mitochondria--the microscopic energy producers present in every living cell. Emphasizing spirituality, exercise, and diet in addition to herbal treatments and nutritional supplements, Yance's complete lifestyle program explores how to enhance energy production in the body and subdue the proinflammatory state that lays the groundwork for nearly every degenerative disease, taking you from merely surviving to thriving.

**Reviewing Earth Science** Univ of California Press

This book offers multi-method case studies of course-based tutoring and one-to-one tutorials in developmental first-year writing courses at two universities. The author makes an argument for more peer-to-peer learning situations for developmental writers and more detailed studies of what goes on in these peer-centered environments.

**Broken On the Wheel** Lulu.com

Over two centuries ago, surveyors laid out the town of Nunda

along the American frontier of western New York State. Named for the Native American village that once stood within its borders, Nunda swelled with settlers seeking to build a better life for their families. The vast township was soon carved into several smaller towns, including Portage and Genesee Falls. Nunda, Portage, and Genesee Falls explores the history of these three towns through historical images and resources from the collections of the author, the Nunda Historical Society, town historians, and area residents. Vintage photographs also tell the stories of the Genesee Valley Canal, the great Portage Bridge, and Letchworth State Park.

**Beyond Dichotomy** Rand Corporation

Fingerprints constitute one of the most important categories of physical evidence, and it is among the few that can be truly individualized. During the last two decades, many new and exciting developments have taken place in the field of fingerprint science, particularly in the realm of methods for developing latent prints and in the growth of imag

**Earth Science** Springer Science & Business Media

Food safety awareness is at an all time high, new and emerging threats to the food supply are being recognized, and consumers are eating more and more meals prepared outside of the home. Accordingly, retail and foodservice establishments, as well as food producers at all levels of the food production chain, have a growing responsibility to ensure that proper food safety and sanitation practices are followed, thereby, safeguarding the health of their guests and customers. Achieving food safety success in this changing environment requires going beyond traditional training, testing, and inspection approaches to

managing risks. It requires a better understanding of organizational culture and the human dimensions of food safety. To improve the food safety performance of a retail or foodservice establishment, an organization with thousands of employees, or a local community, you must change the way people do things. You must change their behavior. In fact, simply put, food safety equals behavior. When viewed from these lenses, one of the most common contributing causes of food borne disease is unsafe behavior (such as improper hand washing, cross-contamination, or undercooking food). Thus, to improve food safety, we need to better integrate food science with behavioral science and use a systems-based approach to managing food safety risk. The importance of organizational culture, human behavior, and systems thinking is well documented in the occupational safety and health fields. However, significant contributions to the scientific literature on these topics are noticeably absent in the field of food safety.

**Practical Nursing Curriculum** ASM Press

"Intellectually deft and lively to read, *Skate Life* is an important addition to the literature on youth cultures, contemporary masculinity, and the role of media in identity formation." ---Janice A. Radway, Northwestern University, author of *Reading the Romance: Women, Patriarchy, and Popular Literature* "With her elegant research design and sophisticated array of anthropological and media studies approaches, Emily Chivers Yochim has produced one of the best books about race, gender, and class that I have read in the last ten years. In a moment where celebratory studies of youth, youth subcultures, and their relationship to media abound, this book stands as a brilliantly

argued analysis of the limitations of youth subcultures and their ambiguous relationship to mainstream commercial culture." --- Ellen Seiter, University of Southern California "Yochim has made a valuable contribution to media and cultural studies as well as youth and American studies by conducting this research and by coining the phrase 'corresponding cultures,' which conceptualizes the complex and dynamic processes skateboarders employ to negotiate their identities as part of both mainstream and counter-cultures." ---JoEllen Fisherkeller, New York University *Skate Life* examines how young male skateboarders use skate culture media in the production of their identities. Emily Chivers Yochim offers a comprehensive ethnographic analysis of an Ann Arbor, Michigan, skateboarding community, situating it within a larger historical examination of skateboarding's portrayal in mainstream media and a critique of mainstream, niche, and locally produced media texts (such as, for example, *Jackass*, *Viva La Bam*, and *Dogtown and Z-Boys*). The book uses these elements to argue that adolescent boys can both critique dominant norms of masculinity and maintain the power that white heterosexual masculinity offers. Additionally, Yochim uses these analyses to introduce the notion of "corresponding cultures," conceptualizing the ways in which media audiences both argue with and incorporate mediated images into their own ideas about identity. In a strong combination of anthropological and media studies approaches, *Skate Life* asks important questions of the literature on youth and provides new ways of assessing how young people create their identities. Emily Chivers Yochim is Assistant Professor in the Department of Communication Arts, Allegheny College. Cover design by Brian V. Smith

Nunda, Portage, and Genesee Falls University of Michigan Press  
An introduction to the study of earth science. Suitable for grades 8-12, this book helps students understand the fundamental concepts of earth science and become familiar with the Earth Science Reference Tables.

**Preharvest Food Safety** CRC Press

This book offers a unique and unified approach to competence and the basic processes of human communication backed by skill assessment. Beginning with the premise that all forms of communication have the potential to be viewed as competent depending on the context or situation, the text helps readers develop a framework for choosing among communication messages that will allow them to act competently. The theoretically-based and skills-oriented framework emphasizes the basic themes of motivation, knowledge and skills across interpersonal communication, electronically mediated communication, small group communication, and public speaking.

*Ohio Apertures* Int. Rice Res. Inst.

An overview of farm-to-fork safety in the preharvest realm Foodborne outbreaks continue to take lives and harm economies, making controlling the entry of pathogens into the food supply a priority. Preharvest factors have been the cause of numerous outbreaks, including Listeria in melons, Salmonella associated with tomatoes, and Shiga toxin-producing E.coli in beef products, yet most traditional control measures and regulations occur at the postharvest stage. Preharvest Food Safety covers a broad swath of knowledge surrounding topics of safety at the preharvest and harvest stages, focusing on problems for specific

food sources and food pathogens, as well as new tools and potential solutions. Led by editors Siddhartha Thakur and Kalmia Kniel, a team of expert authors provides insights into critical themes surrounding preharvest food safety, including Challenges specific to meat, seafood, dairy, egg, produce, grain, and nut production Established and emerging foodborne and agriculture-related pathogens Influences of external factors such as climate change and the growing local-foods trend Regulatory issues from both US and EU perspectives Use of pre- and probiotics, molecular tools, mathematical modeling, and one health approaches Intended to encourage the scientific community and food industry stakeholders to advance their knowledge of the developments and challenges associated with preharvest food safety, this book addresses the current state of the field and provides a diverse array of chapters focused on a variety of food commodities and microbiological hazards.

Acting in the Night CRC Press

Serial murderers generate an abundance of public interest, media coverage, and law enforcement attention, yet after decades of studies, serial murder researchers have been unable to answer the most important question: Why? Providing a unique and comprehensive exploration, *Creating Cultural Monsters: Serial Murder in America* explains connections bet

"Our Best 357 Colleges is the best-selling college guide on the market because it is the voice of the students. Now we let graduate students speak for themselves, too, in these brand-new guides for selecting the ideal business, law, medical, or arts and humanities graduate school. It includes detailed profiles; rankings

based on student surveys, like those made popular by our Best 357 Colleges guide; as well as student quotes about classes, professors, the social scene, and more. Plus we cover the ins and outs of admissions and financial aid. Each guide also includes an index of all schools with the most pertinent facts, such as contact information. And we've topped it all off with our school-says section where participating schools can talk back by providing their own profiles. It's a whole new way to find the perfect match in a graduate school."

**The Acid-alkaline Balance Diet** Burnham

*Invested Stayers: How Teachers Thrive in Challenging Times* features chapters co-authored by PK-12 teachers and postsecondary teacher educators from across the U.S. that reflect how they persist, remain, and thrive in the teaching profession. Premised on the idea that co-authors are colleagues and mentors to each other, this book conceptualizes contributors as invested stayers in the education profession. Chapters feature how particular catalysts, or landmark changes in education, have been productive sites for growth, agency, and even resistance across the arc of contributors' professional lives. The book recognizes that teacher educators and teachers persist because of multiple and overlapping factors between our professional and personal lives, including the relationships we develop with each other as colleagues and mentors in our professional learning. In the public sphere, PK-12 educators increasingly face challenges that limit their ability to initiate their own professional learning. In this book, we considered what might occur if educators had space and time to write together and reflect on how they've persisted. These authors narrate themselves as invested stayers

who invite personal and professional growth through inquiry, creativity, and innovation.

**How Social Movements Die** Simon and Schuster

"In *Responsible Adults*, a mother uses her reluctant adolescent daughter as a model for her art photography. "Your mother loves you best when you are ugly," the girl comes to believe. A stepfather attacks a neighbor boy for exposing a shameful secret to his stepdaughter. A pregnant and undocumented young woman brings new life to a failing church and its dwindling congregation. Farms fail, families break apart, work is hard to come by, and the characters in these fictional Midwestern towns are fueled by grief and hope, loss and desire. What happens when responsible adults are anything but responsible people? When they are at best, irresponsible, and at worst, dangerous?" -- from backcover.

**Truth Decay** Lulu.com

How do social movements die? Some explanations highlight internal factors like factionalization, whereas others stress external factors like repression. Christian Davenport offers an alternative explanation where both factors interact. Drawing on organizational, as well as individual-level, explanations, Davenport argues that social movement death is the outgrowth of a coevolutionary dynamic whereby challengers, influenced by their understanding of what states will do to oppose them, attempt to recruit, motivate, calm, and prepare constituents while governments attempt to hinder all of these processes at the same time. Davenport employs a previously unavailable database that contains information on a black nationalist/secessionist organization, the Republic of New Africa, and the activities of

authorities in the US city of Detroit and state and federal authorities.

**Dictionary of American Naval Aviation Squadrons** John Wiley & Sons

"In ... her fifth volume of poetry, Margaret Rozga brings together some of her best-loved poems about Milwaukee's fair housing marches and her concern for issues of peace and social justice, with new poems that identify with Alice in Wonderland and imagine new Alice adventures. New poems also grapple with issues of recent political turmoil and pandemic-induced uncertainty. These deeply written poems find in language the glue that may hold our selves together."--Back cover.

*Educators with Disabilities* Parlor Press LLC

Climate change has been a central concern over recent years, with visible and highly publicized consequences such as melting Arctic ice and mountain glaciers, rising sea levels, and the submersion of low-lying coastal areas during mid-latitude and tropical cyclones. This book presents a review of the spatial impacts of contemporary climate change, with a focus on a systematic, multi-scalar approach. Beyond the facts rises in temperature, changes in the spatial distribution of precipitation, melting of the marine and terrestrial cryosphere, changes in hydrological regimes at high and medium latitudes, etc. it also analyzes the geopolitical consequences in the Arctic and Central Asia, changes to Mediterranean culture and to viticulture on a global scale, as well as impacts on the distribution of life, for example, in the Amazon rainforest, in large biomes on a global scale, and for birds.

New Approaches to Gall Midge Resistance in Rice Xulon Press

How big media uses technology and the law to lock down culture and control creativity. "'Free Culture is an entertaining and important look at the past and future of the cold war between the media industry and new technologies.'" - Marc Andreessen, cofounder of Netscape. "'Free Culture goes beyond illuminating the catastrophe to our culture of increasing regulation to show examples of how we can make a different future. These new-style heroes and examples are rooted in the traditions of the founding fathers in ways that seem obvious after reading this book. Recommended reading to those trying to unravel the shrill hype around 'intellectual property.'" - Brewster Kahle, founder of the Internet Archive. The web site for the book is <http://free-culture.cc/>.

Microcomputer Specialist Cambridge University Press

Throughout the colonial period the Spanish crown made numerous unsuccessful attempts to conquer Araucanía, Chile's southern borderlands region. *Contested Nation* argues that with Chilean independence, Araucanía—because of its status as a separate nation-state—became essential to the territorial integrity of the new Chilean Republic. This book studies how Araucanía's indigenous inhabitants, the Mapuche, played a central role in the new Chilean state's pursuit of an expansionist policy that simultaneously exalted indigenous bravery while relegating the Mapuche to second-class citizenship. It also examines other subaltern groups, particularly bandits, who challenged the nation-state's monopoly on force and were thus regarded as criminals and enemies unfit for citizenship in Chilean society. Pilar M. Herr's work advances our understanding of early state formation in Chile by viewing this process through the lens

of Chilean-Mapuche relations. She provides a thorough historical context and suggests that Araucanía was central to the process of post-independence nation building and territorial expansion in Chile.

Advances in Fingerprint Technology Rowman & Littlefield

Volume Two of the new guide to the study of biodiversity in insects Volume Two of *Insect Biodiversity: Science and Society* presents an entirely new, companion volume of a comprehensive resource for the most current research on the influence insects have on humankind and on our endangered environment. With contributions from leading researchers and scholars on the topic, the text explores relevant topics including biodiversity in different habitats and regions, taxonomic groups, and perspectives.

Volume Two offers coverage of insect biodiversity in regional settings, such as the Arctic and Asia, and in particular habitats including crops, caves, and islands. The authors also include information on historical, cultural, technical, and climatic

perspectives of insect biodiversity. This book explores the wide variety of insect species and their evolutionary relationships. Case studies offer assessments on how insect biodiversity can help meet the needs of a rapidly expanding human population, and examine the consequences that an increased loss of insect species will have on the world. This important text: Offers the most up-to-date information on the important topic of insect biodiversity Explores vital topics such as the impact on insect biodiversity through habitat loss and degradation and climate change With its companion Volume I, presents current information on the biodiversity of all insect orders Contains reviews of insect biodiversity in culture and art, in the fossil record, and in agricultural systems Includes scientific approaches and methods for the study of insect biodiversity The book offers scientists, academics, professionals, and students a guide for a better understanding of the biology and ecology of insects, highlighting the need to sustainably manage ecosystems in an ever-changing global environment.
