Curriculum Development in Language Teaching

Cambridge University Press

The fundamental mathematical tools needed to understand machine learning include linear algebra, analytic geometry, matrix

decomposition, vector calculus, optimization, probability and statistics.

These topics are traditionally taught in disparate courses, making it hard for data science or computer science students, or professionals, to efficiently learn the mathematics.

This self-contained textbook bridges the gap between mathematical and machine learning texts, introducing the

mathematical concepts with a minimum of prerequisites.

It uses these concepts to derive four central machine learning methods: linear regression, principal component analysis, Gaussian mixture models and support vector machines. For students and others with a mathematical background, these derivations provide a starting point to machine learning texts. For those

learning the mathematics for the first time, the methods help build intuition and practical experience with applying mathematical concepts. Every chapter includes worked examples and exercises to test understanding . Programming tutorials are offered on the book's web site.

Task-based language teaching (TBLT) is an innovative approach to language teaching which emphasises the importance of engaging learners' natural abilities for acquiring language incidentally. The speed with which the field is expanding makes it difficult to keep up with recent developments, for novices and experienced researchers

alike. This handbook meets that need, providing a comprehensive, up-to-date overview of the field, written by a stellar line-up of leading international experts. Chapters are divided into five thematic areas, and as well as covering theory, also contain case studies to show how TBLT can be implemented in practice, in a range of global contexts, as well as questions for

It has found its way from</p> | <p>education into questions about access to professions and migration. This volume focuses on the main debates and research advances in second language assessment in the last fifty years or so, showing the influence of linguistics, politics, philosophy, psychology, sociology, and psychometrics . There are four parts which, when taken together, address the principles and practices of second</p> | <p>language assessment while considering its impact on society. Read separately, each part addresses a different aspect of the field. Part I deals with the conceptual foundations of second language assessment with chapters on the purposes of assessment, and standards and frameworks, as well as matters of scoring, quality assurance, and test validation.</p> |
|---|--|--|

Part II addresses the theory and practice of assessing different second language skills including aspects like intercultural competence and fluency. Part III examines the challenges and opportunities of second language assessment in a range of contexts. In addition to chapters on second language assessment on a national scale, there are chapters on learning-

oriented assessment, as well as the uses of second language assessment in the workplace and for migration. Part IV examines a selection of important issues in the field that deserve attention. These include the alignment of language examinations to external frameworks, the increasing use of technology to both deliver and score second language tests, the

responsibilities associated with assessing test takers with special needs, the concept of 'voice' in second language assessment, and assessment literacy for teachers and other test and score users.
