This book presents the first empirically tested, comprehensive study on shifting cultivation in Mizoram. Shifting cultivation is a unique and centuries-old practice carried out by the people of Mizoram in Northeast India. Today, it is a non-economic activity as it does not produce sufficient crops, and as a result, the area under shifting cultivation is decreasing. Such cultivation leads to the burning and degradation of vast areas of forestland and therefore has adverse impacts on the floral and faunal resources. This book is a valuable resource for government workers, policymakers, academics, farmers and those who are directly or indirectly associated with practical farming, or with framing and implementing policies. It is equally important to master's and Ph.D. students of geography, resource management, development, and environmental studies who are involved in research and development.

India is not only the world's largest and fiercely independent democracy, but

also an emerging economic giant. But to date there has been no comprehensive account of India's remarkable growth or the role policy has played in fueling this expansion. *India: The Emerging Giant* fills this gap, shedding light on one of the most successful experiments in economic development in modern history. Why did the early promise of the Indian economy not materialize and what led to its eventual turnaround? What policy initiatives have been undertaken in the last twenty years and how do they relate to the upward shift in the growth rate? What must be done to push the growth rate to double-digit levels? To answer these crucial questions, Arvind Panagariya offers a brilliant analysis of India's economy over the last fifty years--from the promising start in the 1950s, to the near debacle of the 1970s (when India came to be regarded as a "basket case"), to the phenomenal about face of the last two decades. The author illuminates the ways that government policies have promoted economic growth (or, in the case of Indira Gandhi's policies, economic stagnation), and offers insightful discussions of such key topics as poverty and inequality, tax reform, telecommunications (perhaps the single most important success story), agriculture and transportation, and the government's role in health, education, and sanitation. The dramatic change in the fortunes of 1.1 billion people has, not surprisingly, generated tremendous interest in the economy of India. Arvind Panagariya offers the first major account of how this has come about and what more India must do to sustain its rapid growth and alleviate poverty. It will be must reading for everyone interested in modern India, foreign affairs, or the world economy.

Corporate saving is one of the most significant source of funds for financing corporate growth. It has both micro as well as macro significance. In spite of such dual importance of this decision problem, the theoretical determinants of corporate savings are less well established and this is an area in which very little research has been done so far. The present work is an effort in this direction. The main highlights of the present work in context to General Engineering Industry are :

- In general engineering industry, saving decision is considered as a primary decision variable in the firm's policy framework.
- Saving decision of firms is primarily governed by 'profit after tax', a measure of firm's capacity to save.
- Previous year's dividend is very often taken into account by firms as an important determinant while framing their saving policy.
- Investment demand has a significant influence on the saving decision of firms.
- External finance is negatively related to the saving decision of firms.
- Increase in interest payment would induce firms to rely more on corporate saving.

This report describes the world economic outlook as of April 2018, projecting that advanced economies will continue to expand above their potential growth rates before decelerating, while growth in emerging markets in developing economies will rise before leveling off. It details global prospects and policies, including risks to the forecast, and essential determinants of long-term economic growth: labor force participation in advanced economies, the

declining share of manufacturing jobs globally and in advanced economies, and the process through which innovative activity and technological knowledge spread across national borders.

Air bags cause accidents, because well-protected drivers take more risks. This

well-documented truth comes as a surprise to most people, but not to economists, who have learned to take seriously the proposition that people respond to incentives. In *The Armchair Economist*, Steven E. Landsburg shows how the laws of economics reveal themselves in everyday experience and illuminate the entire range of human behavior. Why does popcorn cost so much at the cinema? The 'obvious' answer is that the owner has a monopoly, but if that were the whole story, there would also be a monopoly price to use the toilet. When a sudden frost destroys much of the Florida orange crop and prices skyrocket, journalists point to the 'obvious' exercise of monopoly power. Economists see just the opposite: If growers had monopoly power, they'd have raised prices before the frost. Why don't concert promoters raise ticket prices even when they are sure they will sell out months in advance? Why are some goods sold at auction and others at pre-announced prices? Why do boxes at the football sell out before the standard seats do? Why are bank buildings fancier than supermarkets? Why do corporations confer huge pensions on failed executives? Why don't firms require workers to buy their jobs? Landsburg explains why the obvious answers are wrong, reveals better answers, and illuminates the fundamental laws of human behavior along the way. This is a book of surprises: a guided tour of the familiar, filtered through a decidedly unfamiliar lens. This is economics for the sheer intellectual joy of it.

Agriculture plays a vital role in Indian economy from the very inception of economic planning. Agriculture alone cannot solve all the basic problems of

the country like unemployment. So small Industries play a key role for economic development of the country. India is a country of resources, unless these resources are utilised in full, the development of the country is not possible, so establishment of small industries in rural as well as in urban areas are essential. This book is of immense value. It throws light on various angles of Small Industries of our country. The book is very helpful to the planners, teachers, research, scholars, students, government agencies and non-government agencies which are concerned with the economic development of the country as a whole. The Crisis First In Latin America And Recently In The Economies Of East And South East Asia Has Generated A Lively Discussion On The Benefits And Pitfalls Of The Process Of Liberalisation And Globalisation. It Has Also Led To Questioning Of The More Or Less Uniform Conditionalities And Structural Reforms Prescribed By The I.M.F. And The World Bank For Providing Financial Assistance. The Present Volume Discusses These And Many Other Issues Relating To The Process Of Liberalisation And Globalisation. It Has Paid Special Attention To The Discussion Of The Respective Roles Of The Market And The State In Any Programme Of Rapid Development Without Creating Social Tensions. The Volume Includes Papers Written By Twenty-Two Economists Spread Over The Entire Country. The Response To The First Two Volumes Of The Book Was So Encouraging That It Has Led To The Publication Of The Present Third Volume.

Globalization And Infrastructural Development In India Northern Book Centre

The book presents a comprehensive treatment of unemployment and

economic problems in Jammu & Kashmir. Kashmir, being a conflict-ridden zone, has far less opportunities for employment than rest of the other states. With an underdeveloped industrial sector and the inability of government to create enough jobs, there seems to be no immediate solution. Lack of avenues to engage the youth in meaningful ways result in making miscreants out of many of them. Young populations across the world are generally seen as drivers of socio-economic growth, but in Kashmir, the youth bulge is a problem. Unemployed youths destabilize the economy by being used to create mayhem by the anti-social elements in the region.

Underdevelopment and unemployment in Jammu & Kashmir is the manifestation of a mismatch between physical and human resources. This exists when a large segment of the working age population does not possess the appropriate skills and knowledge to be gainfully employed. In addition, lackadaisical and imprudent policies pursued by subsequent governments are the major challenge. A radical shift in its policies, especially in the education sector, is an absolute prerequisite for the birth of a capable workforce. The remedy lies in revamping the education sector by crafting appropriate policies for suitable skills in line with the socio-economic requirements of the society. The book argues the government must think about a long-term plan for unemployed youth and devise a policy to channel the youth bulge constructively. *Jammu & Kashmir* Oxford University Press
