COHEN BENITEZ

*Biodiversity and Its
Conservation in India*

Scientific Publishers
This book deals with the
economic potentials of
biodiversity and its
capacity to support its
own conservation aiming
to provide livelihood for
millions engaged in
conservation, both now

and for future
generations. The book
highlights the potentials
of natural resources which
are characterized as
capital wealth (as defined
in Convention on
Biological Diversity
(CBD)), to finance its own

conservation and to provide livelihood means to people who conserve it. The book is divided into five Parts. PART I explains about the Premise of Access and Benefit Sharing (ABS), PART II describes about the Technology Transfer, PART III will provide details about the Access to Genetic Resources and to Associated Traditional Knowledge and Benefit Sharing PART IV is the Implementation of ABS Mechanisms and PART V is about ABS and Its Economics. This book will

be of interest to biodiversity policy makers, administrators, university and college students, researchers, biodiversity conservationists. Biodiversity Indus Publishing
This Publication Embodies Papers Contributed By Eminent Social And Agricultural Scientists Of Repute From Different Parts Of India During The Two Regional Seminars In Eastern And Western Region Organized Under Aegis Of Asian Society Of Entrepreneurship

Education And Development (Aseed), An Ngo Active In The Field Of In The Field Of Biodiversity Awareness And Education That Was Supported By Ministry, Environment And Forest Government Of India. Fueled By Population Pressure, Rapid Expansion And Intensification Of Agriculture Coupled With Our Insensitivity Towards Biodiversity Reservoir Has Resulted In Shrinking Of Basic Biodiversity Base. Nevertheless, Attempts By Scientists, Government Agencies And Ngos Across

The Globe Have Created Awareness For Preserving Biodiversity For The Greater Good Of The Humanity. This Book Has Been Divided In To Four Sections. Section 1 : Participatory Approach For Biodiversity Conservation. Section 2 : Biodiversity And Agricultural Sustainability Section 3 : Enhancing Soil Biodiversity For Increasing Productivity Section 4 : Environment, Forest And Biodiversity Plant Biodiversity Conservation and Management Springer

This book brings together the latest information on the rapid advances and developments in the field of aquatic ecology. India is very rich in terms of biological diversity due to its wide range of habitats and climatic conditions. It is home to as much as 7 per cent of the world's animal species, although it only accounts for about 2 per cent of the total landmass. The present work on biodiversity, ecology and conservation of aquatic resources represents original research in the field of

aquatic biodiversity, wetland ecology and its applications with reference to the country's aquatic resources. There are 19 chapters, each contributed by an expert in his/her particular field and offering novel approaches to various topics in the area of aquatic ecosystems. Understanding Biodiversity Springer Biodiversity Conservation - Challenges for the Future is a multidisciplinary book, linking topics on biodiversity, conservation,

food and nutrition, organic farming, food security and sustainable management. The book summarizes the key ideas for meeting the challenges of biodiversity conservation. It presents suggestions and recommendations and reiterates the need for raising awareness among a range of stakeholders about conservation and sustainable management of biological resources and associated traditional knowledge resources along with ensuring appropriate capacity building at individual and

institutional levels. The book also brings a wealth of knowledge about the local marine ecosystem and Western Ghats biodiversity. Readers will find an a overview of several aspects of biodiversity ranging from: a) The diversity of flora and fauna which will be of immense benefit to the local community. b) Laws and regulations related to access and benefits of sharing Bio-resources. c) Sustainable management models for marine and wetland environmental conservation. d) Case

studies of human participation in biodiversity conservation programmes. e) Key ideas for meeting the challenges of biodiversity conservation and for planning conservation programmes. Biodiversity Conservation - Challenges for the Future is a handy resource for the local conservationist community consisting of policy makers, academicians, scientists, environmentalists, students and grass root level conservationists.

Forest and Biodiversity

Conservation Daya
Books

The survival of the Earth's biological resources is under threat from rapidly expanding human populations that are degrading the environment at an accelerating rate. Despite the increased awareness of the importance of biological diversity, the scientific foundations on which to plan conservation and development policies are still being developed. The biodiversity conservation represents an

unparalleled attempt to provide an independent scientific analysis of the current issues. It assesses the present state of knowledge, identifies gaps in understanding and draws attention to those issues where scientists have reached a consensus as well as those where uncertainty has led to conflicting viewpoints and a need for further research. The assessment provides an unprecedented source of information for decision-makers, officials, scientists and others

interested in the future of the planet.

Mountain biodiversity, land use dynamics, and traditional ecological knowledge Bentham

Science Publishers

This is a textbook on Biodiversity, Conservation and Management for the undergraduate and post-graduate students in Botany. It covers syllabus of most of the Indian Universities on the above subject. It is written in simple and lucid manner. The book running to 122 pages covers Nature, Values and Distribution of

Biodiversity, Conservation of Biodiversity, Global and National Biodiversity Conservation Initiatives and Remote Sensing and Plant Resource Management. The book is profusely illustrated. Several relevant examples are provided wherever necessary.

In Indian context. Biodiversity, Conservation, and Systematics Pointer Publishers
Natural resources are those gift which are directly from nature. India presents nature in all its splendour. Diversity in physical and climatic condition result in wide range of natural vegetation in different region. In their turn these provide habitat for different species of animals and birds, while rain forests are found in the Andaman, Cactus are

found in the Thar desert. Similarly there are alpine forests in the Himalayas while mangroves are grown in the saline soil of Andamans. Since the beginning of our civilisation the varied natural features with its flora and fauna have influenced the life and tradition of world and enriched their natural resources. It is always believed in the interrelationship among nature, environment and people. Therefore, the efforts for conservation of biodiversity and natural

resources should be in tune with the processes and its occurrence in space and time from micro level to mega level. The present book is based on numerous materials, reports, and authors own extensive surveys and researchers of the nation. The book will be welcomed by all taxonomists, foresters, environmentalists and other decision makers.

Contents Chapter 1: Introduction; Chapter 2: Importance of Biodiversity; Chapter 3: Ecosystems, Environment

and Biodiversity; Chapter 4: Extinction of Species and Loss; Chapter 5: Conservation of Biodiversity; Chapter 6: General Aspects of Biodiversity; Chapter 7: Action Plan for National Biodiversity Strategy; Chapter 8: Gene Bank Conservation; Chapter 9: Information on Hot Spot; Chapter 10: Social Biota for Biodiversity; Chapter 11: Biodiversity and Neotropical Primates; Chapter 12: Biodiversity Loss and Threat; Chapter 13: Biodiversity in Farming; Chapter 14:

Nature and Natural Resources Conservation; Chapter 15: Plant Protection International Convention; Chapter 16: Biological Diversity Convention; Chapter 17: Natural Biological Capital of the Earth; Chapter 18: Conservation of Biodiversity in Indian Scenario; Chapter 19: Conservation Biodiversity in Future Strategies for India; Chapter 20: Management of Wildland Biodiversity; Chapter 21: Biodiversity Issues Impact on Diversity; Chapter 22: Systematics and

Biodiversity; Chapter 23: Biodiversity for Tropical Region; Chapter 24: Plant Species Richness and Global Warming; Chapter 25: Diversity in Community; Chapter 26: Bioresources Protection; Chapter 27: Diversity in Ecosystem; Chapter 28: Systems for Renewable Energy; Chapter 29: Environmental Monitoring (Bioindicators); Chapter 30: Environmental Priorities in India; Chapter 31: Environmental Organisations and Agencies.
Challenges to Biodiversity

Conservation and Sustainable Development
Scientific Publishers Journals Department
"The book presents findings and views that should facilitate identification and implementation of remedial measures to conserve species before they vanish, taking with them their genetic legacy and potential benefits for us and our children."--
BOOK JACKET.
Biodiversity Conservation
Discovery Publishing House Pvt Limited
Divided into three

sections, this book explores the three main pillars of sustainable development, namely economy, environment and society, and their interlinkages at the regional level. The first section, Access and Benefit Sharing (ABS) for sustainable development, focuses on international agreements and national legislation, as well as the challenges in implementing ABS in e.g. India. In turn, the second section examines the process of forming Biodiversity Management

Committees (BMCs) at the Local Self Government (LSG) level to promote environmental sustainability, highlighting local and community-level conservation initiatives that have led to the conservation of habitats and species. The third section addresses poverty eradication and food security. The case studies included demonstrate how the combination of traditional knowledge and modern techniques can enhance the productivity of traditional crop varieties, yielding greater

benefits for communities. The aim of this volume is to disseminate the lessons learned from these case studies, as well as the findings from projects already in place, which can offer recommendations that can be applied to similar problems elsewhere in an attempt to find environmental solutions for sustainable development. Further, it introduces readers to new approaches to inclusive development, demonstrating that participation and grass

root empowerment are key drivers of equitable and sustainable development.

Water Lake of Kerala

Indus Publishing
Biodiversity and
Livelihood: Lessons from
Community Research in
India Is a compilation of
research articles on the
ecological biodiversity
and local conservation
efforts of selected regions
in India, and among local
communities throughout
the county. 18 chapters
have been contributed by
experts in ecology,
sustainability and ethnic
studies in India. The
chapters provide
information on a wide
range of topics which cover

local communities, their
agricultural practices and
the ecological
relationships between
their community and the
species on which their
livelihood depends.
Contributions emphasize
different aspects of these
topics, such as
observational ecological
information about the
aforementioned regions
and communities, the
local biodiversity, tribal
customs of ethnic
communities that are
linked to conservation,
specific programs which
are aimed at the

conservation of specific
plant and animal species
endemic to the region, the
benefits shared by the
communities involved
with conservation
programs and
recommendations shared
by the authors for
sustainable management
of the regional ecosystem
and its resources. Readers
will find a wealth of
information about
biodiversity conservation
in different regions in
India (most notably the
western and eastern
ghats and provinces such
as Kerala and Andhra

Pradesh), from a basic and applied perspective. The book is, therefore, an informative reference for conservationists, ecologists, environmentalists and ethnologists who are studying the biodiversity and conservation of India. Readers involved in sustainable development programs in the region will also find the content valuable to their knowledge.

Biodiversity Conservation Through Access and Benefit Sharing (ABS)

Biological diversity encompasses all species of animals, plants, micro-organisms, ecosystem and ecological processes of which they are part. Biodiversity provides the basis for life on earth. The more we know about Earth's biological diversity, the better will be our capability to conserve both terrestrial and aquatic ecosystems. Expanding human population,

overexploitation of natural resources, habitat loss and pollution are contributing to a great extent to the rapid degradation of environmental quality, with its irreversible loss or depletion of species diversity. The current perception is therefore to frame strategies to conserve biodiversity otherwise the future generation will blame us for robbing them for their life support systems. This book includes original research articles on various aspects of

Biodiversity and its Conservation presented by eminent Scientists working within the country and abroad. Most of the concepts are new and pertinent to Indian context. This book will be of immense utility to the Researchers and Post-Graduate students engaged in varied areas of Biodiversity conservation. Conservation of Biodiversity and Natural Resources With reference to Nepal. *Biodiversity: Strategies For Conservation*

The present book updates the subject content of forestry, forest ecosystem, biological diversity, endangered species and biodiversity conservation. The book will be helpful for the researchers, academia working in the field of forestry, forest ecosystem, biological diversity, endangered species and biodiversity conservation and management. **Biodiversity for Sustainable Development** Contributed articles with

reference to India.
