mechanical assembly, require a force applied and/or monitored to execute the process. This can be accomplished either through built-in compliance in the interaction between the tool on the robot and the part being worked on or through a rigid interaction and a controlled force being applied by the robot itself.

Industrial robots are another example. Flexible automation is an extension of programmable automation. The disadvantage with programmable automation is the time required to reprogram and change over the production equipment for each batch of new product. This is lost production time, which is expensive.
