discusses the methods for the preparation and basic functional assessment of mitochondria from liver, kidney, muscle, and brain; the methods for assessing mitochondrial dysfunction in vivo and in intact organs; and the structural aspects of mitochondrial dysfunction are addressed. The text also describes chemical detoxification and metabolism as well as

specific metabolic reactions that are especially important targets or indicators of damage. The methods for measurement of alterations in fatty acid and phospholipid metabolism and for the analysis and manipulation of oxidative injury and antioxidant systems are also considered. The book further tackles additional methods on mitochondrial energetics and transport processes;

approaches for assessing impaired function of mitochondria; and genetic and developmental aspects of mitochondrial disease and toxicology. The text also looks into mitochondrial DNA synthesis, covalent binding to mitochondrial DNA, DNA repair, and mitochondrial dysfunction in the context of developing individuals and cellular differentiation. Microbiologists, toxicologists,

biochemists, and molecular pharmacologists will find the book invaluable. *Wheat Blast* Mdpi AG Captures advancements in the vascular cognitive impairment approach to dementia, providing clear guidelines in diagnoses and management. It also provides a brief introduction to their importance in employment generation. Note: T&F does not sell or distribute

the hardback in India, Pakistan, Nepal, Bhutan, Bangladesh and Sri Lanka. *Natural Fiber Based Composites* CRC Press In 1638, a small book of no more than 92 pages in octavo was published "appresso Gioanne Calleoni" under the title "Discourse on the State of the Jews and in particular those dwelling in the illustrious city of Venice." It was dedicated to the Doge of Venice and his counsellors,

who are labelled “lovers of Truth.” The author of the book was a certain Simone (Simḥa) Luzzatto, a native of Venice, where he lived and died, serving as rabbi for over fifty years during the course of the seventeenth century. Luzzatto’s political thesis is simple and, at the same time, temerarious, if not revolutionary: Venice can put an end to its political

decline, he argues, by offering the Jews a monopoly on overseas commercial activity. This plan is highly recommendable because the Jews are “wellsuited for trade,” much more so than others (such as “foreigners,” for example). The rabbi opens his argument by recalling that trade and usury are the only occupations permitted to Jews. Within the confines of their historical situation, the

Venetian Jews became particularly skilled at trade with partners from the Eastern Mediterranean countries. Luzzatto’s argument is that this talent could be put at the service of the Venetian government in order to maintain – or, more accurately, recover – its political importance as an intermediary between East and West. He was the first to define the role of the Jews on the

basis of their economic and social functions, disregarding the classic categorisation of Judaism's alleged privileged religious status in world history. Nonetheless, going beyond the socio-economic arguments of the book, it is essential to point out Luzzatto's resort to sceptical strategies in order to plead in defence of the Venetian Jews. It is precisely his philosophical and political

scepticism that makes Luzzatto's texts so unique. This edition aims to grant access to his works and thought to English-speaking readers and scholars. By approaching his texts from this point of view, the editors hope to open a new path in research into Jewish culture and philosophy that will enable other scholars to develop new directions and new perspectives,

stressing the interpenetration between Jews and the surrounding Christian and secular cultures. These organelles possess their own genome (mtDNA), which is functionally coordinated with the nuclear genome. Mitochondrial gene expression is

mediated by molecular processes (replication, transcription, translation, and assembly of respiratory chain complexes) that all take place within the mitochondria. Several aspects of mtDNA expression have already been well characterized, but many more either are under debate or have yet to be discovered. Understanding the molecular processes occurring in mitochondria

also has clinical relevance. Dysfunctions affecting these important metabolic 'hubs' are associated with a whole range of severe disorders, known as mitochondrial diseases. In recent years, significant progress has been made to understand the pathogenic mechanisms underlying mitochondrial dysfunction; however, to date, mitochondrial diseases are

complex genetic disorders without any effective therapy. Current therapeutic strategies and clinical trials are aimed at mitigating clinical manifestations and slowing the disease progression to improve the quality of life of patients. The goal of the Special Issue 'Mitochondria: from Physiology to Pathology' published in *Life* (ISSN: 2075-1729) was to collect research and

review articles covering the physiological and pathological aspects related to mtDNA maintenance and gene expression, mitochondrial biogenesis, protein import, organelle metabolism, and quality control.

This book is an up-to-date, comprehensive review of the neuropsychiatry of different types of cognitive impairment by active authorities in the field. There is an emphasis on diagnostic and management issues. Cognitive impairment both with and without criteria for dementia is covered. A critical appraisal of the methodological aspects and limitations of the current

research on the neuropsychiatry of cognitive impairment and dementia is included. Unanswered questions and controversies are addressed. Non-pharmacological and pharmacological aspects of management are discussed, to provide robust information on drug dosages, side effects and interaction, in order to enable the reader to manage these patients more safely.

Illustrative cases provide real life scenarios that are clinically relevant and engaging to read. Neuropsychiatric Symptoms of Cognitive Impairment and Dementia is aimed at neurologists, psychiatrists, gerontologists, and general physicians. It will also be of interest to intensive care doctors, psychologists and neuropsychologists, research and specialist nurses, clinical researchers and methodologist

s. **Treatable and Potentially Preventable Dementias** Springer The Multi-Country Study, which began in 1997, aims to: Obtain reliable estimates of the prevalence of violence against women in different countries throughout the world, in a consistent, standardized manner which will allow for inter-country comparisons; Document the association between

domestic violence against women and a range of health outcomes; Identify risk and protective factors for domestic violence against women, and compare them between settings; Explore and compare the coping strategies used by women experiencing domestic violence; Use the findings nationally and internationally to advocate for an increased

response to domestic and sexual violence against women.

 The ongoing digitisation of the literary papyri (and related technical texts like the medical papyri) is leading to new thoughts on

the concept and shape of the "digital critical edition" of ancient documents. First of all, there is the need of representing any textual and paratextual feature as much as possible, and of encoding them in a semantic markup that is very different from a traditional critical edition, based on the mere display of information. Moreover, several new tools allow us to reconsider

not only the linguistic dimension of the ancient texts (from exploiting the potentialities of linguistic annotation to a full consideration of language variation as a key to socio-cultural analysis), but also the very concept of philological variation (replacing the mono-authorial view of an reconstructed archetype with a dynamic multitextual model closer to the fluid aspect of the

textual transmission). The contributors, experts in the application of digital strategies to the papyrological research, face these issues from their own viewpoints, not without glimpses on parallel fields like Egyptology and Near Eastern studies. The result is a new, original and cross-disciplinary overview of a key issue in the digital humanities. Lifestyle Modification

Considered the largest breakthrough in the treatment of Parkinson's disease in the past 40 years, Deep Brain Stimulation (DBS) is a pioneering procedure of neurology and functional neurosurgery, forging enormous change and growth within the field. The first comprehensiv

Food Processing and Preservation CRC Press Writing Migration through the Body builds a study of the body as a mutable site for negotiating and articulating the transnational experience of mobility. At its core stands a selection of recent migration stories in Italian, which are brought

into dialogue with related material from cultural studies and the visual arts. Occupying no single disciplinary space, and drawing upon an elaborate theoretical framework ranging from phenomenology to anthropology, human geography and memory studies, this volume explores the ways in which the skin itself operates as a border, and brings to the surface the processes by which a sense

of place and self are described and communicated through the migrant body. Through investigating key concepts and practices of transnational embodied experience, the book develops the interpretative principle that the individual bodies which move in contemporary migration flows are the primary agents through which the transcultural passages of images, emotions,

ideas, memories – and also histories and possible futures – are enacted. The Perioperative Medicine Consult Handbook Springer
This book, written by experts from across the world, provides comprehensive coverage of acne and rosacea, focusing in particular on pathogenesis and treatment but also considering clinical aspects, prognostic

factors, and impacts on quality of life. Both standard knowledge and important, clinically relevant insights that have emerged over the past decade are presented with the goal of assisting the reader in understanding these diseases and improving treatment outcome. It is explained how high-level research has recently given rise to a variety of new concepts in etiology and treatment, and emerging

trends are also discussed. The book is in a reader-friendly format that highlights core messages with a very practical and clinical focus. Pathogenesis and Treatment of Acne and Rosacea will be an indispensable reference for all physicians who care for patients with acne or rosacea and for scientists working in the field.

Springer Science & Business Media Surgeons around the world need a basic knowledge of English to keep up to date with advances in their field. Fluency in surgical English is important for your professional development, enabling you to attend English-speaking patients with confidence, to study (or work) in other hospitals, speak

confidently at international meetings, and to write articles for international journals. This book will provide you with the basic tools to handle day-to-day situations without stress and will help you to improve your English, no matter what your level. To our knowledge, this is the first English book written specifically by surgeons for surgeons. We are sure that surgical specialists from all over

the "non-English-speaking world" (general surgeons, thoracic surgeons, vascular surgeons, neurosurgeons, gynecologists, plastic surgeons) will enjoy reading it.

Springer Nature This book is a practical resource that will support the delivery of holistic mental health interventions in the primary and community

care setting for older people. Primary care delivery is discussed in relation to both functional mental health problems, such as anxiety, depression, and psychotic and personality disorders, and acquired organic mental disorders of old age, such as dementia, cognitive impairments, and delirium. Careful consideration is paid to the complex relationship

between mental and somatic health problems, as well as the impacts of multimorbidity and polypharmacy. Further topics include, for example, epidemiology, wider determinants of health, different care models, history taking, neurocognitive and capacity assessment, and pharmacological, psychological, and physical interventions. The wider goals of the book are to support the

development of community resilience and self-care in older people; to promote universal access and equity for older people in order to enable them to achieve or recover the highest attainable standard of health, regardless of age, gender, or social position; and to promote pathways to care for older people with mental health problems respecting their autonomy, independence,

human rights, and the importance of the life-course approach. This book will be an invaluable resource for all professionals who work with older adults with mental health problems and those training in these fields including physicians, psychiatrists, family doctors, geriatricians, general practitioners, nurses, psychologists, neurologists, occupational therapists, social workers,

support workers and community health and social care workers. Neuropsychiatric Symptoms of Cognitive Impairment and Dementia Springer Wheat Blast provides systematic and practical information on wheat blast pathology, summarises research progress and discusses future perspectives based on current understanding of the existing issues. The book explores advance

technologies that may help in deciding the path for future research and development for better strategies and techniques to manage the wheat blast disease. concise and reliable veterinary information. Now this manual covering the diagnosis, treatment, and prevention of diseases of companion, food and zoo animals is available on an easy-to-use, fully searchable CD-ROM. The CD includes the full text of The Merck Veterinary Manual 8/e and has been enhanced with picture links featuring original anatomical artwork and

numerous clinical and diagnostic illustrations, table links and quick search links that provide quick access to cross-referenced text. Digital Papyrology II Springer This publication is a revised and updated version of World Soil Resources Reports No. 84 and 103 and presents the international soil classification system. Every soil in the world can be

allocated to one of the 32 Reference Soil Groups as defined in this document, and can further be characterized by a set of qualifiers. The resulting soil name provides information on soil genesis, soil ecological function and soil properties relevant for land use and management. The same system, refined slightly, may be used to name the units of soil map legends, thereby providing

comprehensive spatial information. By accommodating national soil classification systems, the World Reference Base facilitates the worldwide correlation of soil information. *A Bio-bibliography of Andreas Vesalius Brill Academic Publications, Magicians, necromancers and astrologers are assiduous characters in the European golden age theatre. This book deals with dramatic characters who act as physiognomists or palm readers in the fictional world* and analyses the fictionalisation of physiognomic lore as a practice of divination in early modern Romance theatre from Pietro Aretino and Giordano Bruno to Lope de Vega, Calderón de la Barca and Thomas Corneille.
