 The Glencoe Math Student Edition is an interactive text that engages students and assist with learning and organization. It personalizes the learning experience for every student. The write-in text, 3-hole punched, perfed pages allow students to organize while they are learning.
Glencoe Math, Course 3, Student Edition, Volume 2 Berrett-Koehler Publishers
 Keynesian Economics, Free Market Capitalism, Monetarism, Game Theory and the Invisible Hand. Sure, you know what they mean. That is, you've certainly heard of them. But do you know enough about these economic theories to join a dinner party debate or dazzle the bar with your financial knowledge? 30 Second Economics takes the top 50 economic theories, and explains them to the general reader in half a minute, using nothing more than two pages, 300 words and one picture. Economics will suddenly seem a lot more fun than the economy, and make a lot more sense, and along the way you'll meet founding fathers of modern economics such as Adam Smith, David Ricardo and Alfred Marshall. From Marxism to Mercantilism, plus everything in between, this is the ultimate 'crash' course in economic theory.

In this fascinating book, Chris Abbott, a leading political analyst, takes a close look at 21 key speeches which have shaped the world today. He examines the power of the arguments embedded in these speeches to inspire people to achieve great things, or do great harm. Abbott draws upon his political expertise to explain how our current understanding of the world is rooted in pivotal moments of history. These moments are captured in the words of a range of influential speakers including: Emmeline Pankhurst, Martin Luther King, Jr, Enoch Powell, Napoleon Beazley, Kevin Rudd,

Alexander Solzhenitsyn, Ronald Reagan, George W. Bush, Osama bin Laden, Margaret Beckett, Winston Churchill, Salvador Allende, Margaret Thatcher, Tony Blair, Tim Collins, Mohandas Gandhi, Dwight D. Eisenhower, Robin Cook and Barack Obama. The speeches in this book are arranged thematically, linked by concepts such as 'might is right', 'with us or against us' and 'give peace a chance'. Each transcript is accompanied by an insightful commentary that analyses how the words relate to our modern society. Fresh and relevant, this is a book that will make you stop in your tracks and think about what is really happening in the world today.

Springboard Mathematics Quercus

SpringBoard Mathematics is a highly engaging, student-centered instructional program. This revised edition of SpringBoard is based on the standards defined by the College and Career Readiness Standards for Mathematics for each course. The program may be used as a core curriculum that will provide the instructional content that students need to be prepared for future mathematical courses.

American History, English, and Bible for High School Franklin Classics

30-Second Mythology offers the shortest path to a world of gods and monsters. So much modern culture traces its origins back to Greek and Roman mythology (witness 2010s Clash of the Titans and Percy Jackson and the Olympians). The stories provide wonderful references to make your conversation more heroic and raise your imagination closer to the gods. Sail through these fifty 30-second legends to discover what Hercules did to deserve his twelve labors, why Odysseus took ten years to travel 500 miles, and how Narcissus found the love of his life. The perfect reference book for creative writers, it covers gods and goddesses, heroes and monsters, story locations and the great storytellers. There are also condensed versions of the tragic tales alongside explanations of their modern legacies: from the Oedipus Complex to the Narcissus Syndrome.

By the bestselling author of Voluntary Simplicity (over 150,000 sold) • Brings together cutting-edge science and ancient spiritual wisdom to demonstrate that the universe is a living, sentient system and that we are an integral part of it • Explores the power of this new paradigm to move humanity toward a sustainable and promising future Science has traditionally regarded the universe as mostly made up mostly of inert matter and empty space. At one time this point of view was liberating, part of the Enlightenment-born rationalism that helped humanity free itself from superstition and fear and achieve extraordinary intellectual and technological breakthroughs. But this paradigm has outlived its usefulness. It has led to rampant materialism and environmental degradation—if the

universe is essentially dead and we are alive, then the inanimate stuff of the universe should be ours to exploit. But we now know that not only is the view of a dead universe destructive, it is also inaccurate and misleading. In *The Living Universe*, Duane Elgin brings together evidence from cosmology, biology, physics, and even his participation in NASA-sponsored psychic experiments to show that the universe is permeated by a living field and that we are always in communion with that field of aliveness whether we are conscious of it or not. This is a world-view that, as Elgin explains, is shared by virtually every spiritual tradition, and the implications of it are vast and deep. In a living system, each part is integral to the whole, so each of us is intimately connected to the entire universe. Elgin eloquently demonstrates how our identity manifests itself on a whole series of levels, from subatomic to galactic. We are, he writes, “far more than biological beings—we are beings of cosmic connection and participation.” To confront our ongoing planetary crisis of dwindling resources and escalating conflict, we need to move past an ideology of separation, competition, and exploitation. Duane Elgin asks us to see humanity sharing in the same field of aliveness, to discover how to live sustainably and harmoniously within the living universe.
