English for Medicine in Higher Education Studies The Garnet Education English for Specific Academic Purposes series won the Duke of Edinburgh English Speaking Union English Language Book Award in 2009. English for Medicine is a skills-based course designed specifically for students of medicine who are about to enter English-medium tertiary level studies. It provides carefully graded practice and progression in the key academic skills that all students need, such as listening to lectures and speaking in seminars. It also equips students with the specialist medical language they need to participate successfully within a medical faculty. Extensive listening exercises come from medical lectures, and all reading texts are taken from the same field of study. There is also a focus throughout on the key medical vocabulary that students will need. The Teacher's Book includes: Comprehensive teaching notes on all exercises to help teachers prepare effective lessons Complete answer keys to all exercises Full transcripts of listening exercises Facsimiles of Course Book pages at the appropriate point in each unit Photocopiable resource pages and ideas for additional activities The Garnet English for Specific Academic Purposes series covers a range of academic subjects. All titles present the same skills and vocabulary points. Teachers can therefore deal with a range of ESAP courses at the same time, knowing that each subject title will focus on the same key skills and follow the same structure. Key Features Systematic approach to developing academic skills through relevant content. Focus on receptive skills (reading and listening) to activate productive skills (writing and speaking) in subject area. Eight-page units combine language and academic skills teaching. Vocabulary and academic skills bank in each unit for reference and revision. Audio CDs for further self-study or homework. Ideal coursework for EAP teachers.

'English for Medical Purposes: Medication Calculation for Nurses' presents the language nurses use when calculating the dosage of medication and IV fluids. Nurses often use mathematical language in their daily practice. Vital Signs including blood pressure and temperature and fluid balance assessment require the use of whole numbers, decimals and fractions. Accuracy in medication calculation is essential for patient safety so nurses are assessed on a regular basis to ensure their maths skills remain current. An understanding of the terms used in medication administration including IV Therapy as well as vocabulary practice is also presented in the book.

Dr. William S. Haubrich's curiosity knows no bounds, nor does that of his readers. The overwhelming demand for more histories of yet more words is satisfied in the eagerly awaited second edition of ""Medical Meanings: A Glossary of Word Origins"". Here the reader will find not just etymology and explanations of medical terminology but lessons in history and popular culture. They will learn what really ailed John Merrick, a.k.a., the Elephant Man; what odd deformity plagued the House of Hapsburg, rulers of Spain from 1493 to 1780; and, what the connection is between fetal alcohol syndrome and Little Orphan Annie. Charming, witty, and a rollicking learning experience, the second edition of ""Medical Meanings"" is fully updated and revised to include over thirty per cent more of the definitions, histories, and amusing anecdotes readers of the first edition so treasured. Charley horse is a term commonly used to describe pain and stiffness, usually in thigh muscles and especially that consequent to athletic stress. One explanation is that Charles II of England, following

the Restoration in 1660, rewarded soldiers disabled by service in the Loyalist cause with appointment to undemanding government jobs. Such gimpy veterans were known as 'Charleys'. Later, the same Charley came to be given to an elderly, often partially lame horse retired from strenuous service and reserved for family use. Another story is that a somewhat decrepit horse named Charley was employed to haul a roller back and forth across the playing field of the Chicago White Sox baseball team in the 1890s. If all this seems devious, it's because it is. Pithode is the nuclear barrel-like figure formed in the process of cellular mitosis. The Greek pithos was a wine cask. Rowdy medical students at Johns Hopkins University in the 1890s formed what they called The Society of Pithotomists, a reference to their penchant for tapping into kegs of wine or beer.

This is the first major textbook on the emerging speciality of remote medicine. The modern concept emerged in the 1970s when the medical directors of the main oil companies operating in the North Sea — BP, Shell and Mobil — sought advice from the University sector since the morbidity and mortality levels of offshore workers had become unacceptable. A system of healthcare was jointly developed and applied by the industrial doctors and the academic doctors of Aberdeen University which worked well and greatly improved the healthcare of the offshore personnel. It was subsequently validated by duplication for the very different scientific population of the British Antarctic Survey where it worked even better. It was next introduced to the oilfields of the Middle East — Qatar (QGPC, Offshore and Onshore), Abu Dhabi (ADMA and ADCO) and Oman (PDO) where it worked equally well. The Aberdeen Universities next collaborated with the UAE University in Abu Dhabi to evaluate and develop telemedicine mainly in the area of education and research and they established early transcontinental courses and conferences together with joint supervision and production of higher degrees between collaborating universities in different parts of the world. The recently established International Remote Healthcare Association (IRHCA), backed by the University of Glasgow, the UAE University in Abu Dhabi and the Siberian State Medical University has established an ongoing study to determine the education and skills required to produce a competent Remote Healthcare Practitioner. The chapters in this book contain the knowledge base currently thought by the IRHCA to be necessary to produce a competent remote healthcare practitioners and thus to allow curricular development of the new courses necessary for the establishment of

University qualifications and for the regulating authorities to design examinations and establish appropriate registration. Since this is a new speciality the continuing research of the IRHCA is necessary to act as an audit to ensure that the information in the book, and the courses derived from it remain relevant and also to detect omissions as they are recognised.
