Abstract — The inline-four cylinder engine or straight-four engine is an internal combustion engine with all four cylinders mounted in a straight line, or plane along the crankcase. The cylinders may be oriented in either a vertical or an inclined plane with all the pistons driving a common crankshaft. In this design the cylinder wall contains several intake ports placed uniformly spaced along the circumference just above the position that the piston crown reaches when at BDC. An exhaust valve or several like that of 4-stroke engines is used. The final part of the intake manifold is an air sleeve which feeds the intake ports. Internal combustion engine - Wikipedia
