The global financial crisis triggered a broad reassessment of economic integration policies in developed and developing countries worldwide. The crisis-induced collapse in trade was the sharpest ever since World War II, affecting all countries and all product categories. A huge shock to the trading system, combined with severe macroeconomic instability, makes it natural for policymakers to call into question the basic underlying assumptions of trade liberalization and openness. In particular, outward-oriented or export-led growth

strategies are being reassessed as openness is increasingly associated with greater volatility. However, it is crucial not to lose sight of the dynamic benefits that openness can offer. Examples include technology transfer, increased competitive pressure that reduces markups and improves efficiency, and economies of scale. The real question is how to manage outward-oriented strategies so as to maximize the benefits of openness while minimizing risks. This book aims to contribute to this important and ongoing policy debate, bringing together recent empirical work on the trade collapse, its causes and consequences, and the broader trade policy agenda in the post-crisis environment. It addresses critical policy issues revolving around the topic of outward-oriented growth strategy, including policy instruments that help

manage risks associated with outward-orientation, lessons learned from the crisis for particular countries and regions, and how emerging trade policy issues such as climate change, commodities, global production networking, and migration affect the prospects for recovery and outward-oriented growth.

Israel's half-a-century long rule over the West Bank and Gaza Strip, and some of its surrounding legal issues, have been the subject of extensive academic literature. Yet, to date, there has been no comprehensive, theoretically-informed, and empirically-based academic study of the role of various legal mechanisms, norms, and concepts in shaping,

legitimizing, and responding to the Israeli control regime. This book seeks to fill this gap, while shedding new light on the subject. Through the format of an A-Z legal lexicon, it critically reflects on, challenges, and redefines the language, knowledge, and practices surrounding the Israeli control regime. Taken together, the entries illuminate the relation between global and local forces - legal, political, and cultural - in Israel and Palestine. The study of the terms involved provides insights that are relevant to other situations elsewhere in the world, particularly with regard to belligerent occupation, the law's role in relation to state violence, and justice.

This book presents an in depth study of different aspects of pesticide use in food production. The text covers the sources of pesticide residues in foods, relevant health and environmental concerns, degradation of pesticides after their use, and available laws and regulations to regulate pesticide use. In addition, different pesticide management techniques, such as: reduction of pesticide residues in grains and foods, alternatives to conventional pesticides, and prospects of organic farming are also covered. Pesticide Residue in Foods: Sources, Management, and Control aims to raise awareness of the proper use of these chemicals in order to lower residue in foods and reduce risk for consumers.

Framed by a critical analysis of global capitalism, this book examines how the six states of the Gulf Cooperation Council are powerfully shaping the political economy of the wider Middle East. Through unprecedented and fine-grained empirical research - encompassing sectors such as agribusiness, real estate, finance, retail, telecommunications, and urban utilities - Adam Hanieh lays out the pivotal role of the Gulf in the affairs of other Arab states. This vital but little recognised feature of the Middle East's political economy is essential to understanding contemporary regional dynamics, not least of which is the emergence of significant internal tensions within the Gulf itself. Bringing

fresh insights and a novel interdisciplinary approach to debates across political economy, critical geography, and Middle East studies, this book fills an important gap in how we understand the region and its place in the global order.

This book investigates how ecology and politics meet in the Middle East and how those interactions connect to the global political economy. Through region-wide analyses and case studies from the Arabian Peninsula, the Gulf of Aden, the Levant and North Africa, the volume highlights the intimate connections of environmental activism, energy infrastructure and illicit commodity trading with the political economies of Central Asia, the Horn of Africa and the Indian subcontinent. The book's nine chapters analyze how the exploitation and representation of the environment have shaped the history of the region--and determined its place in global politics. It argues that how the ecological is understood, instrumentalized and intervened upon is the product of political struggle: deconstructing ideas and practices of environmental change means unravelling claims of authority and legitimacy. This is particularly important in a region frequently seen through the prism of environmental determinism, where ruling elites have imposed authoritarian control as the corollary of 'environmental crisis'. This unique and urgent collection will question much of what we think we know about this pressing issue.

Bustle's "17 Best Nonfiction Books Coming Out In September 2018" "With This is the Way the World Ends Jeff Nesbit has

delivered an enlightening - and alarming - explanation of the climate challenge as it exists today. Climate change is no far-off threat. It's impacting communities all over the world at this very moment, and we ignore the scientific reality at our own peril. The good news? As Nesbit underscores, disaster is not preordained. The global community can meet this moment — and we must." —Senator John Kerry

A unique view of climate change glimpsed through the world's resources that are disappearing. The world itself won't end, of course. Only ours will: our livelihoods, our homes, our cultures. And we're squarely at the tipping point. Longer droughts in the Middle East. Growing desertification in China and Africa. The monsoon season shrinking in India.

Amped-up heat waves in Australia. More intense hurricanes reaching America.

Water wars in the Horn of Africa.

Rebellions, refugees and starving children across the globe. These are not disconnected events. These are the pieces

of a larger puzzle that environmental expert Jeff Nesbit puts together Unless we start addressing the causes of climate change and stop simply navigating its effects, we will be facing a series of unstoppable catastrophes by the time our preschoolers graduate from college. Our world is in trouble - right now. This Is the Way the World Ends tells the real stories of the substantial impacts to Earth's systems unfolding across each continent.

The bad news? Within two decades or so, our carbon budget will reach a point of no return. But there's good news. Like every significant challenge we've faced—from creating civilization in the shadow of the last ice age to the Industrial Revolution—we can get out of this box canyon by understanding the realities and

changing the worn-out climate conversation to one that's relevant to every person. Nesbit provides a clear blueprint for real-time, workable solutions we can tackle together.

The 'Arab Spring' of 2011 has affected the countries of the region to varying degrees, including the Gulf Cooperation Council (GCC) members, comprising Saudi Arabia, Kuwait, Qatar, the United Arab Emirates, Oman and Bahrain. The GCC has become a significant regional bloc playing a vital economic and political role far beyond its shores, given its geopolitical strategic location, a preponderance of global energy reserves and a major international player through the use of accumulated financial reserves. A new Gulf is rising, one that is more self assertive, looking to expand its membership to other Arab countries such as Jordan and Morocco, while at the same

time strengthening the bloc's relationship with current and emerging trading and strategic partners in Europe, USA and Asia. Regional and international realities, especially the uncertainties unleashed by the 'Arab Spring', are forcing Gulf leadership to initiate new policies involving closer cooperation amongst GCC countries to address emerging challenges. This volume brings together thirty renowned academics and specialists to examine a range of multifaceted social, political and economic issues facing the GCC in key areas such as: · Diversification from a high dependency on a narrow hydrocarbon base · Social transformation, youth employment and effective gender participation · Outward and inward foreign direct investment flows · Prospects for education reforms and e-learning. · Sustainable security in oil, renewable energy (including nuclear) and food · Corporate governance, transparency and enhancing the private sector's operating environment · The role and governance of Gulf Sovereign Wealth Funds in investing their surpluses. The volume also offers insights for challenges facing the GCC in monetary union, expanding the regional debt market and Sukuk issuance, GCC intellectual property rights application, detailed assessments of individual GCC country risk analysis, as well as the sustainability of long term government fiscal stimulus programs at the expense of private sector involvement.
