The velocity vector components are:  $v_y = dy/dt$   $v_x = dx/dt$  The vector components of the vector that

connects the particle to the point on the x-axis are:  $V_y = y(t)$   $V_x = x(t)$   $f(t)$  For these to be the same, then  $v_y v_x = V_y V_x dy dx = y(t) x(t) f(t) dy dx = dx x(t) f(t)$  This cannot be integrated with  $f(t)$  being arbitrary.
