 Clinical Anatomy of the Cranial Nerves combines anatomical knowledge,

pathology, clinical examination, and explanation of clinical findings, drawing together material typically scattered throughout anatomical textbooks. All of the pertinent anatomical topics are conveniently organized to instruct on anatomy, but also on how to examine the functioning of this anatomy in the patient. Providing a clear and succinct presentation of the underlying anatomy, with directly related applications of the anatomy to clinical examination, the book also provides unique images of anatomical structures of plastinated cadaveric dissections. These images are the only ones that exist in this form, and have been professionally produced in the Laboratory of Human Anatomy, University of Glasgow under the auspices of the author. These specimens offer a novel way of visualizing the cranial nerves and related important anatomical structures. Anatomy of cranial nerves described in text format with accompanying high-resolution images of professional, high-quality prosected cadaveric material, demonstrating exactly what the structures (and related ones) look like Succinct yet comprehensive format with quick and easy access to facts

in clearly laid out key regions, common throughout the different cranial nerves Includes clinical examination and related pathologies, featuring diagnostic summaries of potential clinical presentations and clinically relevant questions on the anatomy of these nerves

 In *Oncology Massage* - an integrative approach to cancer care the authors have created a textbook which will provide both experienced and inexperienced therapists with a resource to expand their knowledge and understanding of working with people with cancer. Cancer occurrence and survivorship are now so common that every massage therapist will at some time work with clients who have been through cancer treatment. The short and long-term effects of biomedical cancer treatment require massage therapy adaptations to pressure, site, position and duration to provide safe and effective treatments. Informed massage therapists can support the body to promote overall wellness as well as identify the underlying secondary effects of cancer treatment that contribute to physical dysfunction. *Oncology Massage: An Integrative Approach to*

Cancer Care provides massage therapists with essential information for: Treatment planning based on the physiology of cancer and cancer treatments Critical, thoughtful treatment decision making Consideration of the psychosocial effects of cancer Enhancing therapist self-awareness and building a therapeutic relationship. The information is presented in a clear and simple format with plentiful use of illustrations and information boxes which allows it to be used both as a learning tool for those new to the field of oncology massage and as a resource for quick referral when working with new patients. The techniques of massage therapy change very little; it is the knowledge and understanding of their use that distinguishes a massage therapist. Oncology Massage is unusual in that it includes contributions not only from a range of experienced practitioners but also from people with cancer who have received massage during and after cancer treatment. This feedback from clients provides an invaluable addition to the understanding of how massage can be used as a safe and effective part of cancer care.

This book tracks the development of Exploratory Practice since the early 1990s as an original form of practitioner research in the field of English language teaching. Drawing on case studies, vignettes and narratives from teachers and learners around the world as they experienced Exploratory Practice in their different contexts, Hanks examines the theoretical and philosophical underpinnings of the Exploratory Practice framework and asks what the principles really mean in practice. For language professionals considering investigating their classrooms and their teaching/learning practices rigorously and thoughtfully, this book breaks new ground, arguing for a fresh perspective: (exploratory) practice-as-research. Judith Hanks is Lecturer in TESOL at the University of Leeds, UK. Her work bridges specialist areas in language teacher education, intercultural communication, TESOL and EAP.
