The science of reading meets the art of teaching readers Do you have the knowledge and instructional ability to effectively teach foundational skills and to support students who show signs of reading difficulties? It is a tall order — and one that challenges many new and veteran teachers.

How to Prevent Reading Difficulties, Grades PreK-3 builds on decades of evidence and years of experience to help teachers understand how the brain learns to read and how to apply that understanding to Tier 1 instruction. The book includes: • step-by-step descriptions of techniques for effectively teaching phonological awareness, spelling, phonics, vocabulary, and comprehension • specific Tier 1 activities, routines, and frameworks that build and strengthen word recognition and language comprehension • links to video demonstrations and online resources • clear, practical explanations of the science of reading, including the Eternal Triangle and the Simple View of Reading, to help teachers understand the fundamentals of the reading process, recognize how difficulties arise – and understand how to address them Author Mark Weakland brings new energy to teaching high-priority foundational skills. By blending the science of reading with the best instructional practices that lead to authentic reading—the ultimate goal of balanced literacy—teachers can prevent many reading difficulties in K-3 learners. Renita Schmidt and P. L. Thomas The guiding mission of the teacher education program in the university where we teach is to create teachers who are scholars and leaders. While the intent of that mission is basically sound in theory—we instill the idea that teachers at all levels are professionals, always learning and growing in knowledge—that theory, that philosophical underpinning does not insure that the students who complete our program are confident about the act or performance of teaching. In our unique program, students work closely with one teacher and classroom for the entire senior year and then are supervised and mentored during their first semester of teaching; the program is heavily field-based, and it depends on the effectiveness of mentoring throughout the methods coursework and the first semester of full-time teaching. Students tell us this guidance and support is invaluable, and yet we feel the disjuncture between university and school just as many of you in more traditional student teaching settings. Students hear “best practice” information from us in methods classes and they receive ample exposure to the research supporting our field, but have a hard time implementing research-based practices in their classroom settings and an even harder time finding it in the classrooms around them.
