Annemarie Schimmel, one of the world's foremost authorities on Persian literature, provides a comprehensive introduction to the complicated and highly sophisticated system of rhetoric and imagery used by the poets of Iran, Ottoman Turkey, and Muslim India. She shows that these images have been

used and refined over the centuries and reflect the changing conditions in the Muslim world. According to Schimmel, Persian poetry does not aim to be spontaneous in spirit or highly personal in form. Instead it is rooted in conventions and rules of prosody, rhymes, and verbal instrumentation. Ideally, every verse should be like a precious stone--perfectly formed and multifaceted--and convey the dynamic relationship between everyday reality and the transcendental. Persian poetry, Schimmel explains, is more similar to

medieval European verse than Western poetry as it has been written since the Romantic period. The characteristic verse form is the ghazal--a set of rhyming couplets--which serves as a vehicle for shrouding in conventional tropes the poet's real intentions. Because Persian poetry is neither narrative nor dramatic in its overall form, its strength lies in an "architectonic" design; each precisely expressed image is carefully fitted into a pattern of linked figures of speech. Schimmel shows that at its heart Persian poetry transforms the world into a web of symbols embedded in Islamic culture.

important part of keeping this knowledge alive and relevant.

AI and Machine Learning Paradigms for Health Monitoring System Springer Science & Business Media

The apocalyptic visions of climate change that are projected in the media often involve extreme weather events, disasters and mass migration of poor people. This book takes a critical look at this notion, drawing on research in Bangladesh, a country located at the heart of debates on climate change and migration. This book argues that rather than leading to dramatic events, climatic and environmental impacts often cause incremental changes in people's habitats and livelihoods, making them migrate in search of better places and income. With or without climate change, climatic and

environmental factors can impoverish people, and drive displacement and migration, especially in the global South. These influences, including disasters, need not necessarily make people move, but instead sometimes trap the poorest and the most vulnerable people in their places exposed to hazards or make them migrate to even riskier places, such as crowded and flood-prone urban slums. This book argues that restrictions placed on people's mobility options could increase their vulnerability and favours proactive migration policies. This timely contribution explains the climate-hazard-migration nexus in an accessible, engaging language for students of geography, development studies, politics and environmental studies, as well as humanitarian and development

practitioners and policymakers.

Lady Fatima Masuma (a) was the daughter of the 7th Imam, Imam Musa al-Kadhim (a), and the sister of the 8th Imam, Imam Ali al-Rida (a). She was a noble lady who dedicated her life to Islam and Allah. She is buried in the city of Qum in Iran. This book includes her biography, education, and narration of traditions. It also includes the history and description of her shrine and a brief look at the city of Qum. This book is one of the many Islamic publications distributed by Ahlulbayt Organization throughout the world in different languages with the aim of conveying the message of Islam to the people of the

world. Ahlulbayt Organization (www.shia.es) is a registered Organization that operates and is sustained through collaborative efforts of volunteers in many countries around the world, and it welcomes your involvement and support. Its objectives are numerous, yet its main goal is to spread the truth about the Islamic faith in general and the Shi`a School of Thought in particular due to the latter being misrepresented, misunderstood and its tenets often assaulted by many ignorant folks, Muslims and non-Muslims. Organization's purpose is to facilitate the dissemination of knowledge through a global medium, the Internet, to locations where such resources are not commonly or easily accessible or are resented, resisted and fought! In addition, For a

Shock wave-boundary-layer interaction
(SBLI) is a fundamental phenomenon in
gas dynamics that is observed in many
practical situations, ranging from
transonic aircraft wings to hypersonic
vehicles and engines. SBLIs have the

potential to pose serious problems in a
flowfield; hence they often prove to be a
critical - or even design limiting - issue
for many aerospace applications. This is
the first book devoted solely to a
comprehensive, state-of-the-art
explanation of this phenomenon. It
includes a description of the basic fluid
mechanics of SBLIs plus contributions
from leading international experts who
share their insight into their physics and
the impact they have in practical flow
situations. This book is for practitioners
and graduate students in aerodynamics
who wish to familiarize themselves with
all aspects of SBLI flows. It is a valuable
resource for specialists because it
compiles experimental, computational
and theoretical knowledge in one place.
The Role of Minorities ILRI (aka ILCA

and ILRAD)

Flooding is one of the most devastating natural hazards in the world. Available records suggest that both flood frequency and severity are on the rise and this is likely to worsen in the context of climate change. As population, infrastructure and poverty grow rapidly in developing countries, particularly in urban agglomerations of 10 million people or more, floods could cause widespread devastation, economic damage and loss of life. Assessment of vulnerability and risk from naturally occurring phenomena is therefore imperative in order to achieve urban sustainability. This book uses geospatial techniques to evaluate hazards, risk and vulnerability at a metropolitan scale in a data-scarce country. An empirical study

was performed using remote sensing, GIS and census data. This research offers a new approach to mapping population, infrastructures and communities at risk which can greatly contribute to the deeper understanding of flood disasters in a rapidly expanding megacity. Examples shown in this book are from Dhaka Megacity, however, the techniques and methods can easily be implemented in medium to large cities of similar characteristics. The book is essential reading for hazard researchers, geospatial scientists, disaster management professionals, geographers, urban planners, and social scientists. Ashraf M. Dewan is currently a Lecturer in the Department of Spatial Sciences at Curtin University, Western Australia (on leave from his substantive

position as Associate Professor in the Geography & Environment Department at the University of Dhaka, Bangladesh). Bengali Literary Review UNC Press Books Analyzes Muslim countries' contemporary problems, particularly violence, authoritarianism, and underdevelopment, comparing their historical levels of development with Western Europe.

Festival for Art, Technology, and Society Springer Science & Business Media

In this era, curiosity of story has become like the mind. Incidents have become shallow. That is why in unnatural circumstances, after searching mystery of heart a big mistake had been inserted in the life of hero and heroine of the story-very cruel but interesting. The

question of its psychology is that the ordinary women of our country are too much conditioned for their husbands, it is so deeply rooted inside their heart that they can easily condemn the trap of their first love, but for all these questions, answer is not same for everything. It is not impossible for a particular girl to be deeply conditioned with old rituals of society, in which the moment she gets information of her unknown husband, she immediately goes to her husband by leaving each bond. If bond and conditioning could have firmly run inside a woman's heart from both the sides till the end of the story, drama of story could be very sharp. The sign of tragedy would have a portrait inside heart, forever. Ramesh becomes the main vehicle of tragedy.

His sorrows were not that much against his feelings, the way it was for the trap of the incident. Therefore, if reader says that writer is a sinner, I won't answer. I will only say that the part of the story which has a touch of poetry in explanation and agony, if there is no deficiency of juice in that part the author could maintain his fame in whole story of ?Nauka Dubi?, but this also I cannot say with full authority, because liking is changing every day.

Pakistan at the Crossroads Routledge

Employed in a large number of commercial electromagnetic simulation packages, the finite element method is one of the most popular and well-established numerical techniques in engineering. This book covers the theory, development, implementation,

and application of the finite element method and its hybrid versions to electromagnetics. FINITE ELEMENT METHOD FOR ELECTROMAGNETICS begins with a step-by-step textbook presentation of the finite method and its variations then goes on to provide up-to-date coverage of three dimensional formulations and modern applications to open and closed domain problems. Worked out examples are included to aid the reader with the fine features of the method and the implementation of its hybridization with other techniques for a robust simulation of large scale radiation and scattering. The crucial treatment of local boundary conditions is carefully worked out in several stages in the book. Sponsored by: IEEE Antennas and Propagation Society.

Asia Pacific Economic Cooperation Economic Committee
Bibhutibhushan Bandyopadhyay was one of the greatest writers in modern Bengali literature, best known for his autobiographical novel Pather Panchali, which, along with another of Bandyopadhyay's books, formed the basis for Satyajit Ray's classic Apu Trilogy. In this semi-autobiographical novel, Satyacharan is a young graduate in 1920s Calcutta, who, unable to find a job in the city, takes up the post of a 'manager' of a vast tract of forested land in neighboring Bihar. As he is increasingly enchanted and hypnotized by the exquisite beauty of nature, he is burdened with the painful task of clearing this land for cultivation. As

ancient trees fall to the cultivator's axe, indigenous tribes--to whom the forest had been home for millennia--lose their ancient way of life. The promise of 'progress' and 'development' brings in streams of landless laborers, impoverished schoolmasters and starving boys from around the region, and the narrator chronicles in visionary prose the tale of destruction and dispossession that is the universal saga of man's struggle to bend nature to his will. Written in 1937-39, and now available in English translation, Aranyak is an unforgettable account of hard lives in a place of vanishing beauty, preserved here for all time by a brilliant artist.

The Imagery of Persian Poetry

Springer

This is a rejoinder to suppressed

histories. The role of minorities in India's struggle for freedom has been praiseworthy in every sense of the term. They played an immensely important role there. Unfortunately, however, that brilliant role does not occupy any meaningful space in our historical discourses. The present work corrects the distortion and draws the picture of the minorities' role in India's freedom struggle in colours true to history. Almost all the minorities—Muslims, Sikhs, Parsis, Christians, etc.—have been given their due space here.

Disentangling Migration and Climate Change DIANE Publishing

The author has made a successful attempt to script a social and political life of Hindustan of the period stretching from 1200-1550 AD. The author very

convincingly brings home the impact of the invasion of the Muslim on the ancient Hindu order which was almost completely destroyed. The book draws a clear picture of how the early Muslim invaders succeeded in levying foundations which proved strong enough for the later Mughals in raising their glorious edifice. Thereby, the author proves that how Akbar as well as his successors followed the pattern, their Turkish and Afghan predecessors had shaped for them.

Intelligent Data Analytics John Wiley & Sons

An extraordinary personal journey from Islamic fundamentalism to a new life in the west. In this spellbinding portrayal of a life that few Americans can imagine, Ali Eteraz tells the story of his schooling

in a madrassa in Pakistan, his teenage years as a Muslim American in the Bible Belt, and his voyage back to Pakistan to find a pious Muslim wife. This lyrical, penetrating saga from a brilliant new literary voice captures the heart of our universal quest for identity and the temptations of religious extremism. Dhaka Megacity Diamond Pocket Books Pvt Ltd

Al Biruni, one of the greatest Arab scholars, was born on September 4, 973, in what is now Uzbekistan. He showed talent at an early age and by his early 20's had written several acclaimed papers. Political unrest in his 20's and 30's found him at one point at Gurgan, on the shores of the Caspian Sea. Peace found him in Ghaznah, which is today in Afghanistan. From 1017 to 1030 he

travelled extensively in India, becoming fluent in Sanskrit. From this he wrote his monumental survey, India, of the history, customs and beliefs of the subcontinent. His other books include The Chronology of Ancient Nations, the Masudic Cannon, Book of Instructions, and more than 100 others, some of which are lost. He died on December 13, 1048, aged 75. He is buried in Ghaznah. The Book of Instruction in the Elements of the Art of Astrology was written for Lady Rayhanah, to whom it is dedicated. R. Ramsay Wright, the translator, said it could be regarded as a primer of 11th century science. Among its highlights are a comprehensive list of more than 150 Lots, various forms of aspects and planetary relationships, planetary positions relative to the sun, an excellent

text on rulerships as well as comprehensive notes on weather and meteorological phenomena. This book was unknown to medieval European astrologers. This edition, comprising the astrological part of the original (sections 347-530) has been taken from Wright's pioneering 1934 translation, itself taken from Persian and Arabic sources. For this edition, text and tables have been reset, and a new index added.

Alchemy Walter de Gruyter

Climate Change and Food Security

Climate change and agriculture are interrelated processes, both of which take place on a global scale. Global warming is projected to have significant impacts on conditions affecting agriculture, including temperature, carbon dioxide, glacial run-off,

precipitation and the interaction of these elements. These conditions determine the carrying capacity of the biosphere to produce enough food for the human population and domesticated animals. The overall effect of climate change on agriculture will depend on the balance of these effects. Assessment of the effects of global climate changes on agriculture might help to properly anticipate and adapt farming to maximize agricultural production. At the same time, agriculture has been shown to produce significant effects on climate change, primarily through the production and release of greenhouse gases such as carbon dioxide, methane, and nitrous oxide, but also by altering the Earth's land cover, which can change its ability to absorb or reflect heat and light, thus

contributing to radiative forcing. Sustained and systematic attention is crucial if we are to avoid a humanitarian catastrophe — A 2009 ICTSD-IPC study by Jodie Keane suggests that climate change could cause farm output in sub-Saharan Africa to decrease by 12 percent by 2080 although in some African countries this figure could be as much as 60 percent, with agricultural exports declining by up to one fifth in others. Adapting to climate change could cost the agriculture sector \$14bn globally a year, the study finds. The book has a comprehensive account of climate change with possible projections on food security in the world. Global scenarios of extreme climatic events and the corresponding probable climatic parameters in the years to come are

discussed elaborately. Contents: • Introduction • Historical Perspective • Responses to Global Warming • Governmental and Intergovernmental Action • Challenges to Achieving Food Security • Climate Change and Agriculture • Global Food Security under Climate Change • Climate Change and World Food Supply • The World Food Trade Model • Fisheries and Climate Change • The Climate Change - Agriculture Conundrum • Impact of Climate Change on Indian Agriculture • Effects on the Regional Vegetation-atmosphere Water Vapour Exchange
Boone County Recorder; Vol. 9 1883
 Springer Nature
 This book addresses environmental and climate change induced migration from the vantage point of migration studies,

offering a broad spectrum of approaches for considering the environment/climate/migration nexus. Research on the subject is still frequently narrowed down to climate change vulnerability and the environmental push factor. The book establishes the interconnections between societal and environmental vulnerability, and migration and capability, allowing appreciation of migration in the frame of climate as a case of spatial and social mobility, that is, as a strategy of persons and groups to deal with a grossly unequal distribution of life chances across the world. In their introduction, the editors fan out the current debate and state the need to transcend predominantly policy-oriented approaches to migration. The

first section of the volume focuses on “Methodologies and Methods” and presents very distinct approaches to think climate induced migration. Subsequent chapters explore the sensitivity of existing migration flows to climate change in Ghana and Bangladesh, the complex relationship between migration, demographic change and coping capacities in Canada, methodological challenges of a household survey on the significance of migration and remittances for adaptation in the Hindu Kush region and an econometric study of the aftermath of the 1998 floods in Bangladesh. The second part, “Areas of Concern: Politics and Human Rights”, deepens the analysis of discourses as well as of the implications of proposed and

implemented policies. Contributors discuss such topics as environmental migration as a multi-causal problem, climate migration as a consequence in an alarmist discourse and climate migration as a solution. A study of an integrated relocation program in Papua New Guinea is followed by chapters on the promise and the flaws of planned relocation policy, global policy on protection of environmental migrants including both internally displaced peoples and those who cross international borders. A concluding chapter places human agency at centre stage and explores the interplay between human rights, capability and migration.

The book Dhaka Megacity: Geospatial Perspectives on Urbanisation, Environment and Health presents the use of geospatial techniques to address a number of environmental issues, including land use change, climatic variability, urban sprawl, population density modelling, flooding, environmental health, water quality, energy resources, urban growth modelling, infectious diseases and the quality of life. Although the work is focused on the Megacity of Dhaka in Bangladesh, the techniques and methods that are used to research these

issues can be utilized in any other areas where rapid population growth coupled with unplanned urbanization is leading to environmental degradation. The book is useful for people working in the area of Geospatial Science, Urban Geography, Environmental Management and International Development. Since the chapters in the book cover a range of environmental issues, this book describes useful tools for assisting informed decision making, particularly in developing countries.
