Encyclopedia of Adolescence Springer
Science & Business Media
The 2-volume set LNCS 11613 and
11614 constitutes the refereed
proceedings of the 6th International
Conference on Augmented Reality,
Virtual Reality, and Computer Graphics,
AVR 2019, held in Santa Maria al Bagno,
Italy, in June 2019. The 32 full papers
and 35 short papers presented were
carefully reviewed and selected from
numerous submissions. The papers

discuss key issues, approaches, ideas,
open problems, innovative applications
and trends in virtual and augmented
reality, 3D visualization and computer
graphics in the areas of medicine,
cultural heritage, arts, education,
entertainment, military and industrial
applications. They are organized in the
following topical sections: virtual reality;
medicine; augmented reality; cultural
heritage; education; and industry.

**Potential Benefits of the National
Reform Agenda** Zed Books

Die Umstrukturierung und
Liberalisierung der Stromerzeugung
brachte tiefgreifende Veränderungen

des Marktes, des Wettbewerbs, der Technologien und nicht zuletzt der gesetzlichen Vorschriften mit sich. Dieser Band konzentriert sich auf die technischen Fortschritte und bespricht derzeit aktuelle Probleme anhand anschaulicher Fallstudien. So werden zum Beispiel neue Verfahren zur Vorhersage der Netzlast erläutert. Von international renommierten Experten geschrieben! (07/00)

PHP and MySQL Manual St. Martin's Essentials

This collection of case studies is authored by a group of internationally recognised experts in the field of cerebrovascular disease. The cases are carefully selected to provide an insight into the different kinds of stroke syndromes from the common through to

more rare presentations of cerebrovascular pathology. Each case is worked through with a discussion on presentation, clinical features, examination, radiological findings and management. Finally, learning points are highlighted to help the reader focus on the key points of the case study. *Stroke Medicine: Case Studies from Queen Square* is aimed at medical students and doctors in all stages of training from foundation years through to consultancy. *World Development Report 2006*

Humana

The United States now spends approximately \$115 billion annually to perform its metal removal tasks using conventional machining technology. Of this total amount, about \$14 billion is invested in the aerospace and

associated industries. It becomes clear that metal removal technology is a very important candidate for rigorous investigation looking toward improvement of productivity within the manufacturing system. To aid in this endeavor, work has begun to establish a new scientific and technical base that will provide principles upon which manufacturing decisions may be based. One of the metal removal areas that has the potential for great economic advantages is high-speed machining and related technology. This text is concerned with discussions of ways in which high-speed machining systems can solve immediate problems of profiling, pocketing, slotting, sculpturing, facing, turning, drilling, and thin-walled sectioning. Benefits to many existing

programs are provided by aiding in solving a current management production problem, that of efficiently removing large volumes of metal by chip removal. The injection of new high-rate metal removal techniques into conventional production procedures, which have remained basically unchanged for a century, presents a formidable systems problem, both technically and managerially. The proper solution requires a sophisticated, difficult process whereby management-worker relationships are reassessed, age-old machine designs reevaluated, and a new vista of product/process planning and design admitted.

Case Studies in Stroke Cambridge University Press

Inequality of opportunity, both within and among nations, sustains extreme deprivation, results in wasted human potential and often weakens prospects for overall prosperity and economic growth, concludes the 2006 World Development Report. To correct this situation and reduce poverty more effectively, Equity and Development recommends ensuring more equitable access by the poor to health care, education, jobs, capital, and secure land rights, among others. It also calls for greater equality of access to political freedoms and political power, breaking down stereotyping and discrimination, and improving access by the poor to justice systems and infrastructure. To

level the playing field among countries, and thereby reduce global inequities that hurt the poor in developing countries, the report calls for removal of trade barriers in rich countries, flexibility to allow greater in-migration of lower-skilled people from developing countries, and increased -- and more effective -- development assistance.

Case Study 6 - Stroke Sydney University Press

Stroke is the leading cause of permanent disability, including post-stroke dementia, pain, depression, and personality changes. While large clinical trials reflect information about large stroke populations, the presentation of each and every stroke patient is individual and special. More Case Studies in Stroke presents a new

selection of stroke cases from seven countries prepared by practising stroke physicians. The book includes both common and unusual cases, as well as misleading cases of diseases mimicking stroke. The aim is to reinforce diagnostic skills through careful analysis of individual presenting patterns, and to guide treatment decisions. Each case consists of a clinical history, examination findings and special investigations, followed by diagnosis and discussion. The outline of the actual diagnostic process, including the use of modern diagnostic tools, decision making and course, challenge the reader at all stages of their career from medical students to neurologists and stroke physicians.

The VR Book Springer Science &

Business Media

'If we are to understand global capital, neoliberalism and the state in meaningful ways, we must understand them as they operate in, and on, particular places and people.' Amanda Walsh Globalisation is an inescapable term in the 21st century, but its real meaning is often difficult to pin down. This book sheds new light on the political and economic implications of globalisation by examining the lived experience of a particular region: the Shoalhaven area of New South Wales, where two iconic Australian industries – dairying and manufacturing – struggled to survive in the face of global competition. Drilling down through layers of theory, policy and politics, Amanda Walsh surveys how

globalisation has played out in regional Australia. Using industry case studies, she explores how decisions made at a national level have affected regional communities, and considers the role of the state in promoting and mediating globalising forces.

Victories of the Martyrs Springer
Science & Business Media

PHP is rapidly becoming the language of choice for dynamic Web development, in particular for e-commerce and on-line database systems. It is open source software and easy to install, and can be used with a variety of operating systems, including Microsoft Windows and UNIX. This comprehensive manual covers the basic core of the language, with lots of practical examples of some of the more recent and useful features

available in version 5.0. MySQL database creation and development is also covered, as it is the developer database most commonly used alongside PHP. It will be an invaluable book for professionals wanting to use PHP to develop their own dynamic web pages.

Key Topics: - Basic Language Constructs
- Manipulating Arrays and Strings - Errors and Buffering - Graphic Manipulation - PDF Library Extension - MySQL Database Management - Classes and Objects
Concepts Features and Benefits:

Explains how to use PHP to its full extent - covering the latest features and functions of PHP version 5.0, including the use of object-oriented programming
Describes how to link a database to a web site, using the MySQL database management system Shows how to

connect PHP to other systems and provides many examples, so that you can create powerful and dynamic web pages and applications. Contains lots of illustrated, practical, real-world examples - including an e-commerce application created in PHP using many of the features described within the book The Body Code CRC Press

This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the

work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant. The Rumour of Calcutta Cambridge University Press

A Computer Science Reader covers the entire field of computing, from its technological status through its social, economic and political significance. The book's clearly written selections represent the best of what has been published in the first three-and-a-half years of ABACUS, Springer-Verlag's international quarterly journal for computing professionals. Among the articles included are: - U.S. versus IBM: An Exercise in Futility? by Robert P. Bigelow - Programmers: The Amateur vs. the Professional by Henry Ledgard - The Composer and the Computer by Lejaren Hiller - SDI: A Violation of Professional Responsibility by David L. Parnas - Who Invented the First Electronic Digital Computer? by Nancy Stern - Foretelling the Future by Adaptive Modeling by Ian

H. Witten and John G. Cleary - The Fifth Generation: Banzai or Pie-in-the-Sky? by Eric A. Weiss This volume contains more than 30 contributions by outstanding and authoritative authors grouped into the magazine's regular categories: Editorials, Articles, Departments, Reports from Correspondents, and Features. A Computer Science Reader will be interesting and important to any computing professional or student who wants to know about the status, trends, and controversies in computer science today.

Cardiac Rehabilitation Univ of California Press

This volume serves as a manual to providers about the multidisciplinary nature of cardiac rehabilitation in the current era, the current state of cardiac

rehabilitation, and the issues presenting to current CR programs. It contains theoretical, practical, and up-to-date cardiac rehabilitation information, including the new Center for Medicare and Medicaid Services (CMS) guidelines for reimbursement. The book offers diverse, comprehensive chapters, from nutrition to programmatic issues. It serves as a perfect resource for staff and directors that are new to cardiac rehabilitation or wish to begin a program.

The Practice of Everyday Life Springer

A groundbreaking book, *THE AGE OF AUTISM* explores how mankind has unwittingly poisoned itself for half a millennium. For centuries, medicine has made reckless use of one of earth's most toxic substances: mercury—and the

consequences, often invisible or ignored, continue to be tragic. Today, background pollution levels, including global emissions of mercury as well as other toxicants, make us all more vulnerable to its effects. From the worst cases of syphilis to Sigmund Freud's first cases of hysteria, from baffling new disorders in 19th century Britain to the modern scourge of autism, *THE AGE OF AUTISM* traces the long overlooked history of mercury poisoning. Now, for the first time, authors Dan Olmsted and Mark Blaxill uncover that history. Within this context, they present startling findings: investigating the first cases of autism diagnosed in the 1940s revealed an unsuspected link to a new form of mercury in seed disinfectants, lumber fungicides and vaccines. In the tradition

of Silent Spring and An Inconvenient Truth, Olmsted and Blaxill demonstrate with clarity how chemical and environmental clues may have been missed as medical "experts," many of them blinded by decades of systemic bias, instead placed blame on parental behavior or children's biology. By exposing the roots and rise of The Age of Autism, this book attempts to point the way out – to a safer future for our children and the planet.

Index Medicus Jossey-Bass

Representations of Calcutta are analysed, and the author shows how the rumours of westerners contribute to the elaboration of an imaginary city. In doing so, they circulate in ways fundamental to the maintenance of international order.

Pattern Recognition and Image

Analysis John Wiley & Sons

The Productivity Commission released its research paper into the 'Potential Benefits of the National Reform Agenda' in February 2007. The research paper which investigated the potential economic and revenue impacts of a National Reform Agenda (NRA) found that the NRA has the potential to significantly raise national output and incomes in Australia. The main purpose of the study was to help governments better understand the scale and distribution of the reforms' anticipated broad economic and fiscal impacts. There are three streams to the National Reform Agenda: human capital, competition and regulatory reform. The Commission was asked to provide estimates of: the economic benefits

potentially available from implementing proposed reforms and outcome objectives; and the total revenue benefits expected to accrue to the Australian Government and each of the State and Territory governments from the potential economic benefits generated by the NRA. The Commission found that reforms aimed at improving productivity and efficiency in energy, transport and related infrastructure and reducing the regulatory burden on business, if fully implemented, could increase GDP in time by up to around \$17 billion or nearly 2 per cent. If the potential for a 5 per cent improvement in the productivity of health service delivery was realised, this would result in resource savings of around \$3 billion and increase GDP by some 0.4 per cent.

Human capital reforms targeting health promotion and disease prevention, education and training, and work incentives could potentially yield even larger gains. The Commission found that all jurisdictions would receive increased tax revenues flowing from reform induced growth. For the competition and regulatory reform streams, Governments' combined net revenues could rise by as much as \$5 billion. Potential net revenue outcomes are more speculative for the 'human capital' reforms.

Morgan & Claypool

Michel de Certeau considers the uses to which social representation and modes of social behavior are put by individuals and groups, describing the tactics

available to the common man for reclaiming his own autonomy from the all-pervasive forces of commerce, politics, and culture. In exploring the public meaning of ingeniously defended private meanings, de Certeau draws on an immense theoretical literature in analytic philosophy, linguistics, sociology, semiology, and anthropology--to speak of an apposite use of imaginative literature.

12 Strokes Springer

This book is about Sulph(on)ation Technology in its technical entirety, aiming at superiority in final product quality, raw material utilisation, sustained plant reliability and safety, minimisation of liquid effluent and gaseous emissions; it is about the total quality of the operation. It will be of

value to engineers and chemists who are, or will be, involved in the practical daily operation of sulphonation plants or R&D activities. The book can also be used as a tool for the teacher in preparing final year projects in a chemical engineering curriculum. The book covers sulphonation of alkylbenzenes, primary alcohols, alcohol ethers, alpha-olefins and fatty acid methyl esters, with a strong emphasis on the sulphur-based S_{\sim} air sulphonation technology. The first part deals with raw material specifications, hazards, storage, handling and physical properties. In the following section the process chemistry is discussed, indicating main chemical reactions, undesired parallel and consecutive reactions, exothermal heat effects and all other process chemistry

data that are relevant for process selection and equipment design. The section about the actual process equipment from the various plant equipment suppliers (Ballestra, Chemithon, Mazzoni, Meccaniche Modeme and Lion Corp.) takes into account the chemical reaction engineering aspects derived from the sulphonation technology processing chemistry. Product quality, product storage and handling, product safety and physical properties are the contents of the next section. The effluent handling and exhaust gas treatment of the SO₂ sulphonation technology are further discussed in detail.

Power System Restructuring and Deregulation

Pearson Education
Rohner breaks new ground by offering a

theoretical foundation for the problem of child abuse. Drawing on data from several societies, both industrialized and non-industrialized, he studies the effects of parental rejection on children within the framework of his Parental Acceptance/Rejection Theory. Moreover, he offers insights into the conditions enabling individuals to break the cycle of abuse.

Mergers, Acquisitions, and

Corporate Restructurings Springer Publishing Company

The essential M&A primer, updated with the latest research and statistics Mergers, Acquisitions, and Corporate Restructurings provides a comprehensive look at the field's growth and development, and places M&As in realistic context amidst changing trends,

legislation, and global perspectives. All-inclusive coverage merges expert discussion with extensive graphs, research, and case studies to show how M&As can be used successfully, how each form works, and how they are governed by the laws of major countries. Strategies and motives are carefully analyzed alongside legalities each step of the way, and specific techniques are dissected to provide deep insight into real-world operations. This new seventh edition has been revised to improve clarity and approachability, and features the latest research and data to provide the most accurate assessment of the current M&A landscape. Ancillary materials include PowerPoint slides, a sample syllabus, and a test bank to facilitate training and streamline

comprehension. As the global economy slows, merger and acquisition activity is expected to increase. This book provides an M&A primer for business executives and financial managers seeking a deeper understanding of how corporate restructuring can work for their companies. Understand the many forms of M&As, and the laws that govern them Learn the offensive and defensive techniques used during hostile acquisitions Delve into the strategies and motives that inspire M&As Access the latest data, research, and case studies on private equity, ethics, corporate governance, and more From large megadeals to various forms of downsizing, a full range of restructuring practices are currently being used to revitalize and supercharge companies

around the world. Mergers, Acquisitions, and Corporate Restructurings is an essential resource for executives needing to quickly get up to date to plan their own company's next moves.

Data Protection and Privacy in Healthcare Springer Science & Business Media

In this book, leading international experts explore the emerging concept of the zero energy mass custom home (ZEMCH) – designed to meet the need for social, economic, and environmental sustainability – and provide all of the knowledge required for the delivery of zero energy mass customized housing and community developments in developed and developing countries. The coverage is wide ranging, progressing from explanation of the meaning of

sustainable development to discussion of challenges and trends in mass housing, the advantages and disadvantages of prefabricated methods of construction, and the concepts of mass customization, mass personalization, and inclusive design. A chapter on energy use will aid the reader in designing and retrofitting housing to reduce energy demand and/or improve energy end-use efficiency. Passive design strategies and active technologies (especially solar) are thoroughly reviewed. Application of the ZEMCH construction criteria to new buildings and refurbishment of old houses is explained and the methods and value of building performance simulation, analyzed. The concluding chapter presents examples of ZEMCH projects from around the world, with

discussion of marketing strategy, design, quality assurance, and delivery

challenges. The book will be invaluable as a training/teaching tool for both students and industry partners.
