DECKER ALICE

El Chaparral Exploring Earth's Biomes

Describes the earth's desert regions and the plants and animals that inhabit them.

Earth's Biomes Exploring Earth's Biomes

Encyclopedia of the World's Biomes is a unique, five volume reference that provides a global synthesis of biomes, including the latest science. All of the book's chapters follow a common thematic order that spans biodiversity importance, principal anthropogenic stressors and trends, changing climatic conditions, and conservation strategies for maintaining biomes in an increasingly human-dominated world. This work is a one-stop shop that gives users access to up-to-date, informative articles that go deeper in content than any currently available publication. Offers students and researchers a one-stop shop for information currently only available in scattered or non-technical sources Authored and edited by top scientists in the field Concisely written to guide the reader though the topic Includes meaningful illustrations and suggests further reading for those needing more specific information

Cavendish Square Publishing, LLC

"Covers the freshwater biomes that exist in wetlands, ponds and lakes, and rivers and streams, examining all aspects that define these biomes: vegetation, geographical distribution, challenges posed by the environment, adaptation of the plants and animals to the environment, and conservation efforts"--Publisher's description.

Many Biomes, One Earth Gareth Stevens Publishing LLLP

It's a full home under the leaves of a forest! From spiders and frogs to deer and bears, the temperate forest biome has just the right shelter and weather for a large variety of plants and animals. Learn about the geography and resources of the temperate forest biome as well as how animals and people have adapted to and impacted forest environments. Explore this biome's future and what people can do to help keep it safe.

Grassland Biomes Around the World Exploring Earth's Biomes

Readers will learn about the three major forest biomes, which are temperate, boreal, and rain forests. The text will focus on the climate, plants, and animals that are found in forests around the world. Aligned to Common Core Standards and correlated to state standards. Abdo Kids is a division of ABDO.

Desert ABDO

Explains what Earth's biomes are, the importance of conserving our biomes and the life forms that inhabit each one.

Biomes of the Earth Exploring Earth's Biomes

What would happen if the frozen Arctic completely melted? Certain plants and animals rely on the dry and cold tundra environments. The tundra biome includes both the flat regions of the Arctic and the alpine heights of the mountains. This biome holds a source of food and a climate suitable for the plants and animals that live there. Learn about the geography and resources of the tundra biome as well as how animals and people have adapted to and impacted tundra environments. Explore this biome's future and what people can do to help keep it safe.

Marine Biomes Around the World ABDO

Describes climate, soil, seasons, and landscape of the world's largest continuous biome which spans the Northern Hemisphere across Alaska, Canada, Scandinavia, and Russia.

Terrestrial, Aquatic, and Human-dominated Benchmark Books

Readers will learn about the three main marine biomes, which are oceans, coral reefs, and estuaries (where rivers meet oceans). The text will focus on water temperatures, and the very unique plants and animals that live in salty marine biomes. Aligned to Common Core Standards and correlated to state standards. Abdo Kids is a division of ABDO.

Seek & Find Biomes ABDO

Readers will learn about the two main tundra biomes, which are arctic and alpine. The text will focus on the extreme climate, and the unique plants and animals that inhabit the tundra. Aligned to Common Core Standards and correlated to state standards. Abdo Kids is a division of ABDO.

Earth's Biomes Cambridge University Press

The Biomes of the World series is an introduction to the ecosystems, or ecological communities, that make up the Earth. Each book in this eight-volume series presents clear, scientific information about one specific biome. Each book explores what makes up a particular ecosystem, where in the world the biome is found, and what kinds of living organisms are supported by it. For example, in the Temperate Forests readers can discover the variety of wildlife that lives in this unique environment, as well as explore the natural balance of the temperate forest ecosystem and examine the impact of humans on that system. While these books are scientific in nature, they also include ecological issues that are of particular interest to children and are frequently in the news. In this way, Biomes gives readers an in-depth scientific perspective of a given ecological community and a basis of knowledge that allows them to gain a deeper understanding of the ecological issues that affect the health of our planet. Colorful photographs, maps and ecological diagrams stimulate readers' interest and enhance their understanding.

Desert Biomes Around the World Heinemann-Raintree Library

A look at Earth's major land biomes, their characteristics, and the adaptations that allow organisms to survive in each biome.

Readers will learn about the two main types of freshwater biomes, which are standing (ponds and lakes) and flowing (streams and rivers). The text will focus on mainly on the importance of freshwater, as well as the plants and animals that inhabit it. Aligned to Common Core Standards and correlated to state standards. Abdo Kids is a division of ABDO.

Fun facts and experiments about Earth's amazing and unique

climatic regions! Janice VanCleave's Science Around the World presents interesting facts and fun experiments that relate to the different geographical regions of the world—also known as biomes. Each different biome—forest, grassland, desert, and tundra—has its own unique plant life, animal life, and climate. The experiments, activities, and facts in this book help explain how the different biomes work and show the importance biomes play in keeping life on Earth so fascinatingly diverse. You'll learn how the tilt of Earth affects the weather in different parts of the world; how and why some animals migrate; why leaves change color; and how cacti survive so long without rainfall. From the South American rainforests to the African savannas to the Chinese Takla Makan Desert, you'll find out how climate and geography determine the way plants and animals look and behave—with safe, inexpensive experiments for the home and classroom!

Freshwater Biome Kids Can Press Ltd

A unique look at the boreal forest, Earth's vast and vital wilderness. The boreal forest, the planet's largest land biome, spans the northern regions like "a scarf around the neck of the world." Besides providing homes for many species, the forest's influence is far-reaching: its trees and wetlands clean our air and water and are helping slow global climate change. In this evocative tour, a lyrical fictional narrative is paired with informational sidebars that describe life in the forest throughout the year, from one country to another. One of the world's most magnificent regions comes to vivid life through the art of storytelling.

Tundra Biomes Around the World Enslow Publishing, LLC

In nine volumes, explores each of the earth's major ecological regions, defining important features, animals, and environmental issues.

Concepts of Biology is designed for the single-semester introduction to biology course for non-science majors, which for many students is their only college-level science course. As such, this course represents an important opportunity for students to develop the necessary knowledge, tools, and skills to make informed decisions as they continue with their lives. Rather than being mired down with facts and vocabulary, the typical non-science major student needs information presented in a way that is easy to read and understand. Even more importantly, the content should be meaningful. Students do much better when they understand why biology is relevant to their everyday lives. For these reasons, Concepts of Biology is grounded on an evolutionary basis and includes exciting features that highlight careers in the biological sciences and everyday applications of the concepts at hand. We also strive to show the interconnectedness of topics within this extremely broad discipline. In order to meet the needs of today's instructors and students, we maintain the overall organization and coverage found in most syllabi for this course. A strength of Concepts of Biology is that instructors can customize the book, adapting it to the approach that works best in their classroom. Concepts of Biology also includes an innovative art program that incorporates critical thinking and clicker questions to help students understand—and apply—key concepts.

Biomes of the World Set 2 Exploring Earth's Biomes

Did you know that Antarctica is the largest desert in the world? It receives so little rain or snow that it is almost as dry as the Sahara! Whether cold, hot, or somewhere in between, a third of Earth's land is part of the desert biome. Learn about the geography and resources of the desert biome as well as how animals and people have adapted to and impacted desert environments. Explore this biome's future and what people can do to help keep it safe.

Life in a Tundra Grolier Academic Reference

Earth has many biomes. Each one has special features. Each one has its own plants and animals. Learn about biomes and the species that live in them. Read along and count down Earth's top five biomes. This full-color nonfiction reader will engage students in reading while introducing them to new vocabulary terms and

concepts. Important text features include a glossary and a table of contents to develop students' comprehension and literacy skills. This book aligns with national and state standards and features exciting TIME For Kids content to keep grade 2 students engaged in learning.
