geological observations. Basic Gold Prospecting & Exploration Methods Mineral exploration is made up of a variety of different activities and techniques that are used to find a potential discovery - which may one day become an operating mine. Going from a previously unexplored piece of land ("greenfield exploration") to a well-defined mineral deposit can take years of work and huge sums of money. Types of Mineral Exploration — New Pacific Metals Mineral Exploration. The chances of a mineral occurrence being developed as a mine are low (may be 1 in 1000). Lesser number of identified resources does not imply low mineral potential in an area. It might be due to many reasons like, incorrect geological theories, poor infrastructure and policy of the Government. Geological Methods in Mineral Exploration and Mining ... Measuring the effectiveness of geological exploration and looking for trends that will lead to improved exploration success are key drivers for continued investment in the exploration industry. Exploration for mineral deposits - global trends No. 47 SRK Consulting's International Newsletter Expenditure on exploration in Australia, for example, Exploration Geology - SRK Mining engineering is associated with many other disciplines, such as mineral processing, exploration, excavation, geology, and metallurgy, geotechnical engineering and surveying. A mining engineer may manage any phase of mining operations - from exploration and discovery of the mineral resource, through feasibility study, mine design, development of plans, production and operations to mine closure. Mining engineering - Wikipedia Electric-resistance methods such as induced polarization methods can be useful for directly detecting sulfide bodies, coal and resistive rocks such as salt and carbonates. Seismic methods can be also used for mineral exploration, since they can provide high-resolution images of geologic structures hosting mineral deposits.
