On behalf of the PROFES Organizing Committee we are proud to present the proceedings of the 10 International Conference on Product Focused Software Process - improvement (PROFES 2009), held in

Oulu, Finland. Since the first conference in 1999, the conference has established its place in the software engineering community as a respected conference that brings together participants from academia and industry. The roots of PROFES are in professional software process improvement motivated by product and service quality needs. The conference addresses both the solutions found in practice as well as relevant research results from academia. To ensure that PROFES retains its high quality and focus on the most relevant research issues, the conference has actively maintained close collaboration with industry and subsequently widened its scope to the research areas of collaborative and agile software development. A special focus for 2009 was placed on software business to bridge research and practice in the economics of software engineering. This enabled us to cover software development in a more comprehensive manner and tackle one of the most important current challenges identified by the software industry and software research community – namely, the shift of focus from “products” to “services.” The current global economic downturn emphasizes the need for new methods and solutions for fast and business-oriented development of products and services in a globally distributed environment.

For many years now Enterprise Information Systems have been critical in helping businesses successfully navigate the global market. The development that started with design and implementation of integrated systems has evolved to incorporate a multitude of perspectives and ideas. The Enterprise Information Systems functionality extends from principally an ERP (Enterprise Resource Planning) system to a portfolio of standard systems including CRM (Customer Relationship Management) systems and SCM (Supply Chain Management) systems. *Advances in Enterprise Information Systems II* is divided into seven thematic sections, each exploring a distinct topic. In “Concepts in Enterprise Information Systems” the authors present new concepts and ideas for the field. “Cases in Enterprise Information Systems” introduces studies of enterprise information systems in an organizational context. “Business Process Management” is one of the major themes within enterprise information systems and “Designing Enterprise Information Systems” discusses new approaches to the design of processes and system and also deals with how design can be taken as a specific perspective. “Enterprise Information Systems in various domains” features generic studies that contribute to advancing the practical knowledge of the field as well as towards “Global issues of Enterprise Information Systems”. Finally, in “Emerging Topics in Enterprise Information Systems”, new technologies and ideas are explored. Cloud computing in particular seems to be setting the agenda for future research in enterprise information systems. The book will be invaluable

to academics and professionals interested in recent developments in the field of enterprise information systems.

This fifteen-chapter monograph edited by Joanna Paliszkiwicz is an interesting read that focuses on light to moderate topics in the areas of management and information technology. The topics are from cryptocurrencies and their online exchanges in Poland to using the concept of blockchain in agribusiness, using virtual reality, creating knowledge and innovation in family businesses, the importance of social media in education, risk analysis, security and forensic science, and effective communication in enterprises. The monograph continues with topics of CRM/ERP implementation in SMEs in Poland, big data/agri-food industry and innovative solution for knowledge management, the impact of digital technologies on competences, digitization in agriculture, and the impact of merchandising on consumer behaviour. Although there is little connection in terms of reading structure from one chapter to the next, each chapter uniquely stands alone to offer insights into the topic it examines in a very simple and understandable manner.

The Case of Chinese State-Owned Enterprises John Wiley & Sons

This book constitutes the proceedings of the 6th International IFIP Working Conference on Research and Practical Issues of Enterprise Information Systems (CONFENIS 2012), held in Ghent, Belgium, during September 19–21, 2012. The theme of the conference was "enterprise information systems of the future -- evolving toward more performance through transparency and agility," mirroring the trend toward more open and more flexible systems. In all, 53 contributions were submitted and after a rigorous review process 10 full papers and 15 short papers were selected for publication in this book. These 25 papers present a well-balanced mix between the traditional social sciences and the novel design science paradigms in enterprise information systems research, and they also include practitioner-oriented and practice-driven contributions. The topics covered fall into three categories: information management in businesses (e.g., enterprise modeling or business process management), information systems from a management perspective (e.g., service innovation, business intelligence, or decision support systems), and ERP offerings and implementations (e.g., software as a service or ERP case studies).

Grand Successes and Failures in IT: Public and Private Sectors IGI Global

Enterprise Resource Planning (ERP) is an enterprise-wide software solution that integrates and automates business functions of an organization. This real-time information integration across the organization's functional areas increases operational efficiencies and helps managers to arrive at better decisions making the organization more competitive. Today having an ERP system is not a luxury, but a necessity. A robust ERP system along with a fully trained workforce is a must for an organization's survival.

Encyclopedia of Information Science and Technology, Second Edition IGI Global

Enterprise Resources Planning (ERP) systems have now become an integral part of the organisational structure of thousands of modern organisations with any sizes and in many countries and sectors. However, after very substantial investment, successful implementation of ERP is in fact not the end of the journey. Very often, the system post-implementation stage is where the real challenges begin. This book reports on a research study that aimed at identifying and exploring potential barriers and risks that can affect successful post-implementation of ERP systems in the context of Chinese Stated-Owned Enterprises (SOEs). The study adopted a mixed-methods research

design, which consisted of a questionnaire survey and a follow-up multiple case study. The findings of the study showed that the identified ERP barriers and risks are interwoven and closely interrelated with each other. More importantly, business-oriented and human-related challenges, which are associated with the hitherto management deficiencies in SOEs, were found to be the main triggers of potential ERP post-implementation failure and should therefore receive substantial attention from managers in Chinese SOEs.

6th International Conference, ICISTM 2012, Grenoble, France, March 28-30. Proceedings IGI Global
 This research attempts to explore and identify eventual relationships between the evolution of ERP systems and information systems integration or disintegration. The aim of this research is to know if the relationships between the ERP systems and the information systems are guided by certain factors and, as a result, to understand, more in-depth, the factors affecting these relationships. More precisely, this analysis aims to study whether assigned values given to these factors could guide the evolution of ERP systems in a manner that promotes IS integration; and if the opposite assigned values to these same factors could guide the evolution of ERP systems in a manner that provokes IS disintegration instead.

Planning, Implementation and Evaluation John Wiley & Sons

This book brings together recent qualitative research studies in enterprise-wide implementations. This collection is useful as a teaching case for academia, a student reference and also for academics, researchers and IT practitioners who wish to gain a broad view of ERP implementation success and failure, This book provides relevant methodologies and recent empirical research findings in the area and includes sufficient background information for an understanding of each case but focuses on providing a rich description of more than a dozen real life cases.
