From the bestselling author of *The Map and the Territory* and *Capitalism in America* *The Age Of Turbulence* is Alan Greenspan's incomparable reckoning with the contemporary financial world, channeled through his own experiences working in the command room of the global economy longer and with greater effect than any other single living figure. Following the arc of his remarkable life's journey through his more than eighteen-year tenure as chairman of the Federal Reserve Board to the present, in the second half of *The Age of Turbulence* Dr. Greenspan embarks on a magnificent tour d'horizon of the global economy. The distillation of a life's worth of wisdom and insight into an elegant expression of a coherent worldview, *The Age of Turbulence* will stand as Alan Greenspan's personal and intellectual legacy.

Since Plato, philosophers have described the decision-making process as either rational or emotional: we carefully deliberate or we 'blink' and go with our gut. But as scientists break open the mind's black box with the latest tools of neuroscience, they're

discovering this is not how the mind works. Our best decisions are a finely tuned blend of both feeling and reason - and the precise mix depends on the situation. When buying a house, for example, it's best to let our unconscious mull over the many variables. But when we're picking stocks and shares, intuition often leads us astray. The trick is to determine when to lean on which part of the brain, and to do this, we need to think harder (and smarter) about how we think.

• ... release reputation bearers from the burden of being constantly monitored and reduce the

likelihood of government or public supervision and control. • ... strengthen client trust, ease the recruitment and retention of capable employees and improve access to capital markets or attract investors. • ... legitimate positions of power and build up reserves of trust which - lowed companies and politicians - but also researchers and journalists - to put their issues on the public agenda, present them credibly and mould them in their own interests. But a fear of loss is not the only reason for the steadily increasing - portance of reputation in corporate management today (or more especially, in the minds of top management). Rather, the main reason is that corporate reputation has shifted from being an unquantifiable 'soft' factor to a measurable indicator in the sense of management control. And it is a variable that is obviously relevant to a company's performance: recent studies by the European Centre for Reputation Studies and the Ludwig-Maximilians-Universität of Munich compared the stock market performance of a portfolio of the top 25% of reputation leaders (based

on regular reputation measurements in the wider public) with that of the German DAX 30 stock market index. The results show that a portfolio consisting of reputation leaders 1 outperformed the stock market index by up to 45% - and with less risk. Fig. 1. Performance of 'reputation portfolios' vs.

The purpose of this book is to illustrate the magnificence of the fabless semiconductor ecosystem, and to give credit where credit is due. We trace the history of the semiconductor industry from both a technical and business perspective. We argue that the development of the fabless business model was a key enabler of the growth in semiconductors since the mid-1980s. Because business models, as much as the technology, are what keep us thrilled with new gadgets year after year, we focus on the evolution of the electronics business. We also invited key players in the industry to contribute chapters. These "In Their Own Words" chapters allow the heavyweights of the industry to tell their corporate history for themselves, focusing on the industry developments (both in technology and business models) that made them successful, and how they in turn drive the further evolution of the semiconductor industry.

This book reviews the theoretical fundamentals of grey-box identification and puts the spotlight on MoCaVa, a MATLAB-compatible software tool, for facilitating the procedure of effective grey-box identification. It demonstrates the application of MoCaVa using two case studies drawn from the paper and steel industries. In addition, the book answers common questions which will help in building accurate models for systems with unknown inputs.

As global society becomes more and more dependent, politically and economically, on the flow of information, the power of those who can disrupt and manipulate that flow also increases. In *Hactivism and Cyberwars* Tim Jordan and Paul Taylor provide a detailed history of hacktivism's evolution from early hacking culture to its present day status as the radical face of online politics. They describe the ways in which hacktivism has re-appropriated hacking techniques to create an innovative new form of political protest. A full explanation is given of the different strands of

hacktivism and the 'cyberwars' it has created, ranging from such avant garde groups as the Electronic Disturbance Theatre to more virtually focused groups labelled 'The Digitally Correct'. The full social and historical context of hacktivism is portrayed to take into account its position in terms of new social movements, direct action and its contribution to the globalization debate. This book provides an important corrective flip-side to mainstream accounts of E-commerce and broadens the conceptualization of the internet to take into full account the other side of the digital divide.

In *Knowing the Score*, philosopher David Papineau uses sports to illuminate some of modern philosophy's most perplexing questions. As

Papineau demonstrates, the study of sports clarifies, challenges, and sometimes confuses crucial issues in philosophy. The tactics of road bicycle racing shed new light on questions of altruism, while sporting family dynasties reorient the nature v. nurture debate. Why do sports competitors choke? Why do fans think God will favor their team over their rivals? How can it be moral to deceive the umpire by framing a pitch? From all of these questions, and many more, philosophy has a great deal to learn. An entertaining and erudite book that ranges far and wide through the sporting world, *Knowing the Score* is perfect reading for armchair philosophers and Monday morning quarterbacks alike.

Spotlight on First is a fully comprehensive course that has been revised to be in line with the new Cambridge English exam specifications for January 2015. It prepares adults and younger learners to excel in the revised exam. An exciting new feature of this revised edition is the Ideas Generator. Test takers need to generate ideas to pass the Speaking and Writing papers of the exam. The Ideas Generator uses National Geographic videos to stimulate

students' interest in common exam topics, help them build ideas about these topics and gather the language they need to effectively write or speak about them. After each video lesson students will have a bank of ideas, functional language and vocabulary tied to eight topics that commonly appear in the exam. One of the most difficult parts of the exam for students is the Speaking Test. The Speaking Test videos and worksheets prepare students to deal with this challenge by getting them to engage with simulations of all four parts of the Speaking test.
