"Rich with expert, practical guidance for therapists, this book presents an evidence-based group treatment approach for survivors of interpersonal trauma. This time-limited treatment is designed for clients who have achieved basic safety and stability in present-day life and who

are ready to work on the more enduring ways that trauma has harmed their self-perception and relationships. Vivid case examples and transcripts illustrate the process of screening, selecting, and orienting group members and helping them craft and work toward individualized goals, while optimizing the healing power of group interactions. In a convenient large-size format, the book includes reproducible handouts, worksheets, and

 Within the last decade there has been a tremendous explosion in the clinical, theoretical, and empirical literature related to the study of dissociation. Not since the work done at the turn of the century by Pierre Janet, Morton Prince, William James, and others have the psychological and medical communities shown this great an interest in describing and understanding dissociative phenomena. This volume is the result of this significant expansion. Presently, interest in the scientific and clinical progress in the field of dissociation is indicated by the following: 1. The explosion of conferences, workshops, and seminars devoted to dissociative disorders treatment and research. 2. The emergence of NIMH-supported investigations that focus on dissociation. 3. The burgeoning literature on dissociation. According to a 1992 bibliographic analysis of the field by Goettman et al. (1992), 72% of all writings on the topic have appeared in the past decade, with about 1000 published papers

scattered across diverse disciplines and journals. 4. Current interest in dissociation as reflected in the appearance of major articles and special issues in respected psychology and psychiatry journals. 5. The initiation of a journal entitled Dissociation (Richard Kluft, MD, Editor) devoted to the area.

 This book provides a state of the art review on the care and treatment of and current scientific knowledge on gender dysphoria (GD) and disorders of sex development (DSD). The book elucidates the history, the present situation, and the newest developments and future perspectives in both research on GD and DSD and the clinical management of individuals with GD and DSD of all ages. With contributions from a selection of leading scientists and established clinicians in the field of GD and DSD, this is a unique and comprehensive book

focusing on the etiology and developmental trajectories of GD and DSD regarding gender identity development, psychiatric comorbidity, classification dilemmas, ethical dilemmas in treatment, influences of societal stigmatization, and discussion of the medical and psychological implications and outcomes of treatment, and providing treatment guidelines for individuals with GD and DSD (distinct guidelines each for children, adolescents, and adults). By presenting not only an historic overview and the current state of the art, but also challenges for the future, the book aims to demonstrate the need for further research and to stimulate the development and improvement of the clinical care of individuals with GD and DSD.

 It is well known that many children and adolescents entering the juvenile justice system suffer from serious mental disorders. Yet until now, few resources have been available to help mental health and juvenile justice professionals accurately identify the mental health needs of the youths in their care. Filling a

crucial gap, this volume offers a practical primer on screening and assessment together with in-depth reviews of over 20 widely used instruments. Comprehensive and timely, it brings together leading experts to provide authoritative guidance in this challenging area of clinical practice. Grounded in extensive research and real world practical experience, this is an indispensable reference for clinical and forensic psychologists, social workers, and psychiatrists, as well as juvenile justice administrators and others who work with youths in the justice system. An informative resource for students, it is an ideal supplemental text for graduate-level courses.

Traumatic Dissociation: Neurobiology and Treatment offers an advanced introduction to this symptom, process, and pattern of personality organization seen in several trauma-related disorders, including acute stress disorder, posttraumatic stress disorder (PTSD), and the dissociative disorders. Our understanding of traumatic dissociation has recently been advanced by neuroimaging technology, empirically-

based investigation, and an acknowledgment of its importance in psychopathology. The authors of this volume tie these findings together, tracking the condition from its earliest historical conceptualization to its most recent neurobiological understanding to provide even greater insight into traumatic dissociation and its treatment. Bringing together for the first time theoretical, cognitive, and neurobiological perspectives on traumatic dissociation, this volume is designed to provide both empirical and therapeutic insights by drawing on the work of many of the main contributors to the field. Opening chapters examine historical, conceptual, and theoretical issues and how other fields, such as cognitive psychology, have been applied to the study of traumatic dissociation. The following section focuses specifically on how neurobiological investigations have deepened our understanding of dissociation and concluding chapters explore issues pertinent to the assessment and treatment of traumatic dissociation. The interacting effects of traumatic experience, developmental history,

neurobiological function, and specific vulnerabilities to dissociative processes that underlie the occurrence of traumatic dissociation are among some of the key issues covered. The book's significant contributions include A review of cognitive experimental findings on attention and memory functioning in dissociative identity disorder An appreciation of how the literature on hypnosis provides a greater understanding of perceptual processing and traumatic stress Ascertaining symptoms of dissociation in a military setting and in other situations of extreme stress An outline of key issues for planning assessment of traumatic dissociation, including a critique of its primary empirically supported standardized measures An examination of the association between child abuse or neglect and the development of eating disorders, suggesting ways to therapeutically deal with negative body experience to reduce events that trigger dissociation A description of neuroendocrine alterations associated with stress, pointing toward a better understanding of the developmental effects of deprivation and trauma on PTSD

and dissociation A review of the relation of attachment and dissociation A discussion of new research findings in the neuroimaging of dissociation and a link between cerebellar functioning and specific peritraumatic experiences Useful as a clinical reference or as ancillary textbook, *Traumatic Dissociation* reorganizes phenomenological observations that have been overlooked, misunderstood, or neglected in traditional training. The research and clinical experience described here will provide the basis for further clinical and theoretical formulations of traumatic dissociation and will advance empirical examination and treatment of the phenomenon.

This book provides a non-mathematical introduction to the theory and application of Exploratory Factor Analysis. Among the issues discussed are the use of confirmatory versus exploratory factor analysis, the use of principal components analysis versus common factor analysis, and procedures for determining the appropriate number of factors.

This book provides an impressive, well-rounded, authoritative overview of the latest research and theory about human aggression. Written by a diverse phalanx of highly respected experts, from evolutionary psychologists and behavioral geneticists to developmental, social, and clinical psychologists, the chapters offer a rich assortment of perspectives and an indispensable survey of issues, facts, and theories about why and how people hurt each other. It is an ideal introduction to the modern psychology of aggression for scholars and students, and a convenient reference for specialists, journalists, and the general public.-Roy F. Baumeister, author of *Evil: Inside Human Violence and*

Cruelty This volume is an outstanding, integrated, biopsychosocial approach to aggression ranging over the contributions of genes, neurophysiology, early life influences, social relationships, personality, and cultures and exploring the "victim perspective." Edited by internationally renowned researchers in attachment and social relationships, this gem of a book provides detailed, up-to-date access to current work by world leaders in the field. The best way of dealing aggression and becoming more compassionate is to better understand the facilitators and inhibitors of aggression, and this volume significantly contributes to this important endeavor. Paul Gilbert, author of *The Compassionate Mind* In this exciting book, leading experts cover contemporary theory, research, and practice in the psychology of aggression and violence. There is something here for everyone interested in these topics: basic theory, up-to-date reviews, and practical applications. There is a broad range of approaches including evolutionary background, neuroscience and genetics, environmental influences, violence between groups, and the impact on

victims. John Archer, School of Psychology University of Central Lancashire, Lancashire, United Kingdom Violence and aggression have existed as long as humankind, and the need to understand and control these forces has only continued to grow throughout history. Thanks to the advance of psychological research within the social and behavioral sciences, as well as several other scientific disciplines, we have more knowledge than ever before about the genetic, developmental, interpersonal, and cultural causes of aggression. Yet these findings have not been integrated into meaningful discussions about how to transform aggression research into practical applications. With so many answers to the question "What makes a person violent?" there is surprisingly little insight into "How do we prevent violence?" In this comprehensive book, editors Phillip R. Shaver and Mario Mikulincer have assembled chapters from international experts to provide a broad-based and multidisciplinary analysis of aggression and violence, their negative consequences, and promising interventions. Five sections examine major

theoretical perspectives, genetic and environmental determinants, and the psychological and relational processes underlying human violence and aggression. The tone of the book is realistic in its investigation of violence as an inherent part of human genetics and interaction, but hopeful in its exploration of research-based interventions aimed at reducing violence in future generations. In its assessment of aggression and violence across individual, relational and societal levels, this book will engage a broad audience. This book is part of the Herzliya Series on Personality and Social Psychology. Phillip R. Shaver, PhD, a social and personality psychologist, is Distinguished Professor of Psychology at the University of California, Davis. Before moving there, he served on the faculties of Columbia University, New York University, University of Denver, and State University of New York at Buffalo. He has coauthored and co-edited numerous books. He is a member of the editorial boards of *Attachment and Human Development*, *Personal Relationships*, the *Journal of Personality and Social Psychology*, and *Emotion*, and has served on grant review

panels for the National Institutes of Health and the National Science Foundation. He has been executive officer of the Society of Experimental Social Psychology and is a fellow of both the American Psychological Association and the Association for Psychological Science. Dr. Shaver received a Distinguished Career Award from the International Association for Relationship Research and has served as president of that organization. Mario Mikulincer, PhD, is professor of psychology and dean of the New School of Psychology at the Interdisciplinary Center in Herzliya, Israel. He has published 3 books and over 280 scholarly journal articles and book chapters. He is a member of the editorial boards of several scientific journals, including the *Journal of Personality and Social Psychology*, *Psychological Inquiry*, and *Personality and Social Psychology Review*, and has served as associate editor of two journals. Recently, he was elected to serve as chief editor of the *Journal of Social and Personal Relationships*. The need for evidence-based practice in mental health services is becoming clearer by the day and, until recently, the trend of emphasizing services with supporting empirical evidence has been almost exclusively limited to a focus on treatment options. *A Guide to Assessments That Work* fills a void in the professional literature by addressing the critical role that assessment plays in providing evidence-based mental health services. To optimize its usefulness to readers, this volume addresses the assessment of the most commonly encountered disorders or

conditions among children, adolescents, adults, older adults, and couples. Strategies and instruments for assessing mood disorders, anxiety disorders, couple distress and sexual problems, health-related problems, and many other conditions are also covered in depth. With a focus throughout on assessment instruments that are feasible, psychometrically sound, and useful for typical clinical requirements, a rating system has been designed to provide evaluations of a measure's norms, reliability, validity, and clinical utility. Standardized tables summarize this information in each chapter, providing essential information on the most scientifically sound tools available for a range of assessment needs. Using the tools provided in *A Guide to Assessments That Work*, readers can at a glance determine the possible suitability and value of each instrument for their own clinical purposes. This much needed resource equips readers with the knowledge necessary for conducting the best evidence-based mental health assessments currently possible.

Transgender studies is the latest area of academic inquiry to grow out of the exciting nexus of queer theory, feminist studies, and the history of sexuality. Because transpeople challenge our most fundamental assumptions about the relationship between bodies, desire, and identity, the field is both fascinating and contentious. *The Transgender Studies Reader* puts between two covers fifty influential texts with new introductions by the editors that, taken together, document the evolution of transgender studies in the English-speaking world. By bringing together the voices and experience of transgender individuals, doctors, psychologists and academically-based theorists, this volume will be a foundational text for the transgender

community, transgender studies, and related queer theory.

on Intimacy and Alienation puts forward the author's unique paradigm for psychotherapy and counselling based on the assumption that each patient has suffered a disruption of the 'self', and that the goal of the therapist is to identify and work with that disruption. Using many clinical illustrations, and drawing on self psychology, attachment therapy and theories of trauma, Russell Meares looks at the nature of self and how it develops, before going on to explore the form and feeling of experience when self is disrupted in a traumatic way, and focusing on ways towards the restoration of the self. Written in an accessible style from the author's singular perspective, Intimacy and Alienation will appeal to professionals in the fields of psychotherapy, counselling, social work and psychiatry, as well as to students and the lay reader.

Exploratory Factor Analysis Guilford Press
To be a human being (or indeed to be a primate) is to be attached to other fellow beings in relationships, from infancy on. This book examines what happens when the mechanisms of early attachment go awry, when caregiver and child do not form a relationship in which the child finds security in times of uncertainty and stress. Although John Bowlby, a psychiatrist and psychoanalyst, originally formulated attachment theory for the express purpose of understanding psychopathology across the life span, the concept of attachment

was first adopted by psychologists studying typical development. In recent years, clinicians have rediscovered the potential of attachment theory to help them understand psychological/psychiatric disturbance, a potential that has now been amplified by decades of research on typical development. Attachment Issues in Psychopathology and Intervention is the first book to offer a comprehensive overview of the implications of current attachment research and theory for conceptualizing psychopathology and planning effective intervention efforts. It usefully integrates attachment considerations into other frameworks within which psychopathology has been described and points new directions for investigation. The contributors, who include some of the major architects of attachment theory, link what we have learned about attachment to difficulties across the life span, such as failure to thrive, social withdrawal, aggression, anxiety, depression, bipolar disorder, dissociation, trauma, schizo-affective disorder, narcissistic personality disorder, eating disorders, and comorbid disorders. While all chapters are illuminated by rich

case examples and discuss intervention at length, half focus solely on interventions informed by attachment theory, such as

toddler-parent psychotherapy and emotionally focused couples therapy. Mental health professionals and

researchers alike will find much in this book to stimulate and facilitate effective new approaches to their work.
