The case study has proved of enduring interest to all Western societies, particularly in relation to questions of subjectivity and the sexed self. This volume interrogates how case studies have been used by doctors, lawyers, psychoanalysts, and writers to communicate their findings both within the specialist circles of their academic disciplines, and beyond, to wider publics. At the same time, it questions how case studies have been taken up by a range of audiences to refute and dispute academic knowledge. As such, this book engages with case studies as sites of interdisciplinary negotiation, transnational exchange and influence, exploring the effects of forces such as war, migration, and internationalization. *Case Studies and the Dissemination of Knowledge* challenges the limits of disciplinary-based research in the humanities. The cases examined serve as a means of passage between disciplines, genres, and publics, from law to psychoanalysis, and from auto/biography to modernist fiction. Its chapters scrutinize the case study in order to sharpen understanding of the genre's dynamic role in the construction and dissemination of knowledge within and across disciplinary, temporal, and national boundaries. In doing so, they position the case at the center of cultural and social understandings of the emergence of modern subjectivities.

Awarded first place in the 2017 AJN Book of the Year Awards in the Medical-Surgical Nursing category. Learn how to become an exceptional caregiver in today's evolving healthcare environment! Written by a dedicated team of expert authors led by Sharon Lewis, *Medical-Surgical Nursing, 10th Edition* offers up-to-date coverage of the latest trends, hot topics, and clinical developments in the field. Completely revised and updated content explores patient care in various clinical settings and focuses on key topics such as patient safety, NCLEX exam preparation, evidence-based practice, and teamwork. A variety of helpful boxes and tables make it easy for you to find essential information and the accessible writing style and building-block approach make even the most complex concepts easy to grasp. Best of all — a complete collection of learning and study resources helps you learn more effectively and offers valuable, real-world preparation for clinical practice. Highly readable format offers you a strong foundation in medical-surgical nursing. Content written and reviewed by leading experts in the field ensures that information is comprehensive, current, and clinically accurate. Informatics boxes discuss how technology is used by nurses and patients in healthcare settings. Expanded coverage of evidence-based practice helps you understand how to apply the latest research to real-life patient care. Expanded Safety Alerts throughout the book highlight patient safety issues and focus on the latest National Patient Safety Goals. UNIQUE! "Levels of Care" approach explains how nursing care varies for different levels of health and illness. Bridge to NCLEX Examination review questions at the end of each chapter reinforce key content while helping you prepare for the NCLEX examination with both standard and alternate item format questions. Unfolding case studies included throughout each assessment

chapter help you apply concepts and procedures to real-life patient care. Managing Care of Multiple Patients case studies at the end of each section help you apply your knowledge of various disorders and prioritize and delegate patient care. Separate chapter on genetics focuses on the practical application to nursing care of patients. Genetics in Clinical Practice boxes address key topics such as genetic testing, Alzheimer's disease, sickle cell disease, and genetics-related ethical issues. Genetic Risk Alerts and Genetic Link headings highlight specific genetic issues related to body system assessments and disorders.

Social Work in Extremis Mosby Incorporated

Guiding FFICM and EDIC exam candidates through the intensive care medicine curriculum, this book provides 48 case studies mapped to eight key areas of study in the UK and European syllabuses. Cases include clinical vignettes, explanations and a list of key learning points, while also being formatted along the structure of FICM case reports. Key clinical management points are identified and linked to appropriate scientific or evidence-based research and case studies chosen reflect a general population relevant to a worldwide readership. Conditions covered are significant to large areas of clinical practice as well as more discrete specialist knowledge, making this an essential study guide for trainees preparing for exams in intensive care medicine and also a useful learning tool for candidates in related disciplines such as anaesthesia (FRCA), emergency medicine (MCEM) and surgery (MRCS).

*English for Paramedics* is a reading book for doctors and medical students whose mother language is other than English and who need to perfect their language skills and professional knowledge at the same time. In the first volume the cases concern the following topics: airway and breathing assessment; proper interventions for patients with respiratory compromise; oxygen delivery systems; ventilatory support; respiratory anatomy and physiology; basic airway management; basic cardiopulmonary resuscitation; advanced interventions, cardiology, Other casuistics describe medical emergencies (respiratory neurology; endocrinology; allergies/anaphylaxis; gastroenterology; urology; environmental; behavioural; toxicology). Further chapters are devoted to trauma, assessment recognition and treatment of various traumatic injuries still others to gynaecology, obstetrics and paediatrics. The last part of the first volume deals with operations, scene safety; legal considerations; vehicle operations; communications; documentation; infection controlling; quality improvement; DNR; basic patient assessment; basic physiology; hazardous materials; mass casualty

incidents; and scene management. The second volume is divided into 24 units each of which contains about 20 casuistics. These covers the whole area of emergency services but are not grouped according to their subjects which enables to revise the information in a new and discovering manner. Case studies were taken over from materials for self study and testing professional knowledge of future paramedics (see Bibliography). The reading book is suitable for intermediate students but vocabularies at the end of each unit are so detailed than also beginners can use the book and continue in his or her own pace. All texts are short, written in actual language and always contain the right answer (marked with \*). The method of filling in the right answers is not only popular with students but also very efficient in learning new words in context of well known facts. The teachers can find inspiration for further use of casuistics in dialogues and model situations. Some English teachers may find the idea of translating the vocabularies into their own languages interesting which would be a great satisfaction for the author. This reading book will be followed soon by English for Paramedics Textbook and Exercise book. The author wishes the students a lot of pleasure and success in learning professional medical English. 50 Studies Every Intensivist Should Know presents key studies that have shaped the practice of critical care medicine. Selected using a rigorous methodology, the studies cover topics including:

sedation and analgesia, resuscitation, shock, ARDS, nutrition, renal failure, trauma, infection, diabetes, and physical therapy. For each study, a concise summary is presented with an emphasis on the results and limitations of the study, and its implications for practice. An illustrative clinical case concludes each review, followed by brief information on other relevant studies. This book is a must-read for health care professionals and anyone who wants to learn more about the data behind clinical practice. "While clinicians in the intensive care unit increasingly rely on practice guidelines that take into account the best available published research data, sorting through the studies efficiently, and separating the good from the not-so-good is a daunting task even for seasoned practitioners, much less trainees. This superb effort by Dr. Bittner and his group of extremely accomplished and experienced clinicians is a huge step in the right direction. 50 Studies Every Intensivist Should Know provides an excellent list of the landmark studies in the arena of critical care medicine and should be required reading for all our residents and critical care fellows." Medical Case Studies for the Paramedic contains 20 case studies representing a variety of medical emergencies that the paramedic may encounter in the field. Each case study begins by presenting dispatch information and a general impression of the patient upon arriving at the scene. Then, as the case progresses, pertinent patient information is provided, interspersed with a series of standardized questions designed to assess the paramedic's ability in correlating specific signs and symptoms with a particular medical condition and providing the appropriate treatment.
