"Provocative and
appealing . . . well worth
your extremely limited
time." —Barbara Spindel,
The Wall Street Journal
The average human
lifespan is absurdly,
insultingly brief. Assuming
you live to be eighty, you
have just over four
thousand weeks. Nobody
needs telling there isn't
enough time. We're
obsessed with our
lengthening to-do lists,
our overfilled inboxes,
work-life balance, and the
ceaseless battle against
distraction; and we're
deluged with advice on
becoming more
productive and efficient,
and "life hacks" to
optimize our days. But
such techniques often end

up making things worse.
The sense of anxious
hurry grows more intense,
and still the most
meaningful parts of life
seem to lie just beyond
the horizon. Still, we
rarely make the
connection between our
daily struggles with time
and the ultimate time
management problem:
the challenge of how best
to use our four thousand
weeks. Drawing on the
insights of both ancient
and contemporary
philosophers,
psychologists, and
spiritual teachers, Oliver
Burkeman delivers an
entertaining, humorous,
practical, and ultimately
profound guide to time
and time management.
Rejecting the futile
modern fixation on
"getting everything
done," Four Thousand
Weeks introduces readers
to tools for constructing a
meaningful life by
embracing finitude,
showing how many of the
unhelpful ways we've
come to think about time
aren't inescapable,
unchanging truths, but

choices we've made as individuals and as a society—and that we could do things differently.

“An optimistic view on why collective action is still possible—and how it can be realized.” —The New York Times
“As far as heroic characters go, I’m not sure you could do better than Katharine Hayhoe.” —Scientific American
“It’s not an exaggeration to say that Saving Us is one of the more important books about climate change to have been written.” —The Guardian
United Nations Champion of the Earth, climate scientist, and evangelical Christian Katharine Hayhoe changes the debate on how we can save our future. Called “one of the nation's most effective communicators on climate change” by The New York Times, Katharine Hayhoe knows how to navigate all sides of the conversation on our changing planet. A Canadian climate scientist living in Texas, she negotiates distrust of data, indifference to imminent threats, and resistance to proposed solutions with ease. Over the past fifteen years Hayhoe has found that the most important thing we can do to address climate change is talk about it—and she wants to teach you how. In

Saving Us, Hayhoe argues that when it comes to changing hearts and minds, facts are only one part of the equation. We need to find shared values in order to connect our unique identities to collective action. This is not another doomsday narrative about a planet on fire. It is a multilayered look at science, faith, and human psychology, from an icon in her field—recently named chief scientist at The Nature Conservancy. Drawing on interdisciplinary research and personal stories, Hayhoe shows that small conversations can have astonishing results. Saving Us leaves us with the tools to open a dialogue with your loved ones about how we all can play a role in pushing forward for change. For many students, a bachelor's degree is considered the golden ticket to a more financially and intellectually fulfilling life. But the disturbing reality is that debt, unemployment, and politically charged pseudo learning are more likely outcomes for many

college students today than full-time employment and time-honored knowledge. This raises the question: is college still worth it? Who is responsible for debt-saddled, undereducated students, and how do future generations of students avoid the same problems? In a time of economic uncertainty, what majors and schools will produce competitive graduates? Is College Worth It? uses personal experience, statistical analysis, and real-world interviews to provide answers to some of the most troubling social and economic problems of our time.

The first English translation of a nonfiction work by Stanisław Lem, which was "conceived under the spell of cybernetics" in 1957 and updated in 1971. In 1957, Stanisław Lem published *Dialogues*, a book "conceived under the spell of cybernetics," as he wrote in the preface to the second edition. Mimicking the form of Berkeley's *Three Dialogues between Hylas and Philonous*, Lem's original dialogue was an attempt to unravel the then-novel field of

cybernetics. It was a testimony, Lem wrote later, to "the almost limitless cognitive optimism" he felt upon his discovery of cybernetics. This is the first English translation of Lem's *Dialogues*, including the text of the first edition and the later essays added to the second edition in 1971. For the second edition, Lem chose not to revise the original. Recognizing the naivete of his hopes for cybernetics, he constructed a supplement to the first dialogue, which consists of two critical essays, the first a summary of the evolution of cybernetics, the second a contribution to the cybernetic theory of the "sociopathology of governing," amending the first edition's discussion of the pathology of social regulation; and two previously published articles on related topics. From the vantage point of 1971, Lem observes that original book, begun as a search for methods "that would increase our understanding of both the human and nonhuman worlds," was in the end "an expression of the cognitive curiosity and anxiety of modern thought."

An in-depth look at how The New York Times failed in its coverage of the fate of European Jews from 1939–45. It examines how the decisions that were made at The Times ultimately resulted in the minimizing and misunderstanding of modern history's worst genocide. Laurel Leff, a veteran journalist and professor of journalism, recounts how personal relationships at the newspaper, the assimilationist tendencies of The Times' Jewish owner, and the ethos of

mid-century America, all led The Times to consistently downplay news of the Holocaust. It recalls how news of Hitler's 'final solution' was hidden from readers and - because of the newspaper's influence on other media - from America at large. Buried by The Times is required reading for anyone interested in America's response to the Holocaust and for anyone curious about how journalists determine what is newsworthy.

 “The family pets see so much more than anyone realizes in this family drama . . . Told with empathy and hope” by the author of *What Holds Us Together* (Booklist). A boy and his cat. It's an unconventional friendship, perhaps, but for Charlie and Lily, it works beautifully. It was Charlie who chose Lily from among all the cats in the shelter. He didn't frown, the way other humans did, when he saw her injured back leg, the legacy of a cruel previous owner. Instead, Charlie insisted on rescuing her. Now Lily wants to do the same for Charlie. She's the only one who's seen the bruises on Charlie's body. If she knew who

was hurting him, she'd scratch their eyes out. But she can't fix this by herself. Lily needs to get the rest of the family to focus on Charlie—not easy when they're wrapped up in their own problems. Charlie's mother kicked his father out weeks ago and has a new boyfriend who seems charming, but is still a stranger. Oldest son Kevin misses his father desperately. Victoria, Charlie's sister, also has someone new in her life, and Lily is decidedly suspicious. Even Charlie's father, who Lily loves dearly, is behaving strangely. Lily knows what it's like to feel helpless. But she also knows that you don't always have to be the biggest or the strongest to fight fiercely for the ones you love . . .

The deliberate devaluation of Blacks and their communities has had very real, far-reaching, and negative economic and social effects. An enduring white supremacist myth claims brutal conditions in Black communities are mainly the result of Black people's collective choices and moral failings. "That's just how they are" or "there's really no excuse": we've all heard those not so subtle digs. But there is nothing wrong with Black people that ending racism can't solve. We haven't known how much the country will gain by properly valuing homes and businesses, family structures, voters, and school districts in Black neighborhoods. And we need to know. Noted educator, journalist, and scholar Andre Perry takes readers on a tour of six Black-majority cities whose assets and strengths are undervalued. Perry begins in his hometown of Wilksburg, a small city

east of Pittsburgh that, unlike its much larger neighbor, is struggling and failing to attract new jobs and industry. Bringing his own personal story of growing up in Black-majority Wilksburg, Perry also spotlights five others where he has deep connections: Detroit, Birmingham, New Orleans, Atlanta, and Washington, D.C. He provides an intimate look at the assets that should be of greater value to residents—and that can be if they demand it. Perry provides a new means of determining the value of Black communities. Rejecting policies shaped by flawed perspectives of the past and present, it gives fresh insights on the historical effects of racism and provides a new value paradigm to limit them in the future. *Know Your Price* demonstrates the worth of Black people's intrinsic personal strengths, real property, and traditional institutions. These assets are a means of empowerment and, as Perry argues in this provocative and very personal book, are what we need to know and understand to build Black prosperity.

Strengthening the Financial Future of Families, Communities and the Nation Simon and Schuster

This book examines the evolution of American universities during the years following World War II. Emphasizing the importance of change at the campus level, the book combines a general consideration of national trends with a close study of eight diverse universities in Massachusetts. The eight are Harvard, M.I.T., Tufts, Brandeis, Boston University, Boston College, Northeastern and the University of Massachusetts. Broad analytic chapters examine major developments like expansion, the rise of graduate education and research, the professionalization of the faculty, and the decline of general education. These chapters also review criticisms of academia that arose in the late 1960s and the fate of various reform proposals during the 1970s. Additional chapters focus on the eight campuses to illustrate the forces that drove different kinds of institutions--research universities, college-centered universities, urban private universities

and public universities--in responding to the circumstances of the postwar years.

Well Worth Saving John Wiley & Sons

The urgent demand for housing after World War I fueled a boom in residential construction that led to historic peaks in home ownership. Foreclosures at the time were rare, and when they did happen, lenders could quickly recoup their losses by selling into a strong market. But no mortgage system is equipped to deal with credit problems on the scale of the Great Depression. As foreclosures quintupled, it became clear that the mortgage system of the 1920s was not up to the task, and borrowers, lenders, and real estate professionals sought action at the federal level. *Well Worth Saving* tells the story of the disastrous housing market during the Great Depression and the extent to which an immensely popular New Deal relief program, the Home Owners' Loan Corporation (HOLC), was able to stem foreclosures by buying distressed mortgages from lenders and refinancing them. Drawing on historical records and modern statistical tools, Price

Fishback, Jonathan Rose, and Kenneth Snowden investigate important unanswered questions to provide an unparalleled view of the mortgage loan industry throughout the 1920s and early '30s. Combining this with the stories of those involved, the book offers a clear understanding of the HOLC within the context of the housing market in which it operated, including an examination of how the incentives and behaviors at play throughout the crisis influenced the effectiveness of policy. More than eighty years after the start of the Great Depression, when politicians have called for similar programs to quell the current mortgage crisis, this accessible account of the Home Owners' Loan Corporation holds invaluable lessons for our own time.

Is It Worth It? Penguin
A timely examination of the attachments we form to objects and how they might be used to reduce waste Rampant consumerism has inundated our planet with pollution and waste. Yet attempts to create environmentally friendly forms of consumption are

often co-opted by corporations looking to sell us more stuff. In *Things Worth Keeping*, Christine Harold investigates the attachments we form to the objects we buy, keep, and discard, and explores how these attachments might be marshaled to create less wasteful practices and balance our consumerist and ecological impulses. Although all economies produce waste, no system generates as much or has become so adept at hiding its excesses as today's mode of global capitalism. This book suggests that managing the material excesses of our lives as consumers requires us to build on, rather than reject, our desire for and attraction to objects. Increasing environmental awareness on its own will be ineffective at reversing ecological devastation, Harold argues, unless it is coupled with a more thorough understanding of how and why we love the things that imbue our lives with pleasure, meaning, and utility. From Marie Kondo's method for decluttering that asks whether the things in our lives "spark joy" to the advent of emotionally durable design, which

seeks to reduce consumption and waste by increasing the meaningfulness of the relationship between user and product, Harold explores how consumer psychology and empathetic design can transform our perception of consumer products from disposable to interconnected. An urgent call for rethinking consumerism, *Things Worth Keeping* shows that by recognizing our responsibility for the things we produce, we can become better stewards of the planet.
