Profit Without Honor: White-Collar Crime and the Looting of America seeks to elucidate a very broad subject: white-collar crime. How broad? Its domain stretches from the small price-gouging merchant to the huge price-fixing cartel. It can breed in an antiseptic hospital or a toxic dump. It is at home on Main Street, Wall Street, Madison Avenue, and countless other addresses - including, at times, 1600 Pennsylvania Avenue.

This book provides students with a comprehensive and engaging introduction to the study of criminology by taking an interdisciplinary approach to explaining criminal behaviour and criminal justice. It is divided into two parts, which address the two essential bases that form the discipline of criminology. Part One describes, discusses and evaluates a range of theoretical approaches that have offered explanations for crime. Part Two offers an accessible but detailed review of the major philosophical aims and sociological theories of punishment, and examines the main areas of the contemporary criminal justice system.

The first comprehensive collection of its kind, this handbook addresses the problem of knowledge production in criminology, redressing the global imbalance with an original focus on the Global South. Issues of vital criminological research and policy significance abound in the Global South, with important implications for South/North relations as well as global security and justice. In a world of high speed communication technologies and fluid national borders, empire building has shifted from colonising territories to colonising knowledge. The authors of this volume question whose voices, experiences, and theories are reflected in the discipline, and argue that diversity of discourse is more important now than ever before. Approaching the subject from a range of historical, theoretical, and social perspectives, this collection promotes the Global South not only as a space for the production of knowledge, but crucially, as a source of innovative research and theory on crime and justice. Wide-ranging in scope and authoritative in theory, this study will appeal to scholars, activists, policy-makers, and students from a wide range of social science disciplines from both the Global North and South, including criminal justice, human rights, and penology.

Leading a manufacturing business does not need to be so difficult! Manufacturing can be frustrating because of endless people challenges, equipment failures, schedule interruptions, and the looming threat of major quality issues. Labor costs rise, employee and customer expectations increase, manufacturing budgets are cut - and you're required to deliver more with less. In this groundbreaking book, Kevin Snook reveals how the manufacturing leader can be instrumental in

making it right. He shares simple but powerful practices for rapidly turning a manufacturing division around, distilling his 30 years of frontline experience with managing hundreds of the world's best (and worst) manufacturing companies into a step-by-step alignment process that you can use to implement change that's effective in days rather than years. Kevin has led companies around the world based on the methods of management legends like Peter F. Drucker, and has implemented lean, high-performance work systems. In the era of Industry 4.0, Kevin has built on those foundations to formulate a highly effective process for aligning your manufacturing organization to deliver sustainable growth. This message in *Make It Right* is clear: Leading a highly successful manufacturing company can be simple, enjoyable, and thoroughly rewarding - if you align the process from the frontline to the bottom line.

Revisiting the 'Ideal Victim' Routledge

Ethics, Value, and Reality is a collection of essays written after Kolnai settled in England in 1955.

These essays from Kolnai's mature years sit atop a remarkable gestation of moral and political thinking. At the heart of his thought is the special role of privilege in a good social order. Kolnai relies heavily on the work of late nineteenth- and early twentieth-century value theorists such as Alexius Meinong, Nicolai Hartmann, and Max Scheler. He blends this continental tradition of ethics with British intuitionism and Scottish Enlightenment articulations. For Kolnai, ethical life cannot be adequately understood except by reference to moral emphasis, and thus, Kolnai can be thought of as a liberal conservative. He acknowledges myriad values, moral and non-moral, and accepts that all can have some claim upon us. Low values as much as high values have a legitimate claim. His is a tolerant conservatism though not for a moment does he forgo the necessity of judgment: a readily graspable hierarchy keeps the respective demands of values in proportion. Kolnai welcomes the call to seriousness, which is the hallmark of existentialism. The ground of Kolnai's thought is the idea of emotion as cognitive. He saw the typical analytical philosopher's fascination with simplicity of explanation not only thoroughly refuted by the gains in understanding wrought by phenomenological method, with its deference to the richness of phenomena, but sensed in the monistic inclination he dreaded a harbinger of totalitarianism. Never denying his emotionalism, he nonetheless made his points well enough by adopting an analytical approach to philosophy and ethics. This is a major work crossing moral and political philosophy.

The infusion of digital technology into contemporary society has had significant effects for everyday life and for everyday crimes. *Digital Criminology: Crime and Justice in Digital Society* is the first interdisciplinary scholarly investigation extending beyond traditional topics of cybercrime, policing and the law to consider the implications of digital society for public engagement with crime and justice movements. This book seeks to connect the disparate fields of criminology, sociology, legal studies, politics, media and cultural studies in the study of crime and justice. Drawing together intersecting conceptual frameworks, *Digital Criminology* examines conceptual, legal, political and cultural framings of crime, formal justice responses and informal citizen-led justice movements in our increasingly connected global and digital society. Building on case study examples from across Australia, Canada, Europe, China, the UK and the United States, *Digital Criminology* explores key questions including: What are the implications of an increasingly digital society for crime and justice? What effects will emergent technologies have for how we respond to crime and participate in crime debates? What will be the foundational shifts in criminological research and frameworks for understanding crime and justice in this technologically mediated context? What does it mean to be a 'just' digital citizen? How will digital communications and social networks enable new forms of justice and justice movements? Ultimately, the book advances the case for an emerging digital criminology: extending the practical and conceptual analyses of 'cyber' or 'e' crime beyond a focus foremost on the novelty, pathology and illegality of technology-enabled crimes, to understandings of online crime as inherently social. "The Iliad of the Iraq war" (Tim Weiner)--a gut-wrenching, beautiful memoir of the consequences of war on the psyche of a young man. Eat the Apple is a daring, twisted, and darkly hilarious story of American youth and masculinity in an age of continuous war. Matt Young joined the Marine Corps at age eighteen after a drunken night culminating in wrapping his car around a fire hydrant. The teenage wasteland he fled followed him to the training bases charged with making him a Marine. Matt survived the training and then not one, not two, but three deployments to Iraq, where the testosterone, danger, and stakes for him and his fellow grunts were dialed up a dozen decibels. With its kaleidoscopic array of literary forms, from interior dialogues to infographics to prose passages that read like poetry, Young's narrative powerfully mirrors the multifaceted nature of his experience. Visceral, ironic, self-lacerating, and ultimately redemptive, Young's story drops us unarmed into Marine Corps culture and lays bare the absurdism of 21st-century war, the manned-up vulnerability of those on the front lines, and the true, if often misguided, motivations that drove a young man to a life at war. Searing in its honesty, tender in its vulnerability, and brilliantly written, Eat the Apple is a modern war classic in the making and a powerful coming-of-age story that maps the insane geography of our times.

"The internet has become an important communications platform which people choose for personal interactions. One of the most popular manifestations is the creation and maintenance of social relationships using social and dating websites. Unscrupulous operators have identified its potential for reaching vulnerable people and have started using it as platform for their criminal activity in the form of so-called Online Romance Scams. Quickly, this cybercrime has become very successful and thus an increasing threat in the social networking environment. The Online Romance Scam causes considerable financial and emotional damage to the victims. In this research we introduce a theory which helps to explain the success of this scam. In a similar way to the "The Nigerian Letter", we propose that the scam techniques appeal to strong emotions, which are clearly involved in Romantic relationships. We also assume that the same success factors of normal relationships contribute to the success of the Romance Scam. Previous research into normal relationships has identified personal "love stories" as an important factor for the development of relationships. We have suggested that these personal love stories will have a key role in fraudulent relationships. The aim of this research is to explore Online Romance Scams as a type of 'virtual love' which initially creates happiness for the victim in a virtual romantic relationship, but tragically then causes the victim to be separated from his or her savings. Using narrative research methodology, this research will establish a model of the Romance Scam structure and its variations regarding human romantic attitudes. During the research program, the analysis of publicly available data from the internet were used, and as a consequence of this, appropriate ethical usage of research data is discussed. Findings of this research will contribute to the knowledge of the Online Romance Scam as significant crime, and provide information about the structure and the development of the modus operandi which can be used to identify an online relationship as a scam at an early phase in order to prevent significant harm to the victim." -- Abstract.

'Abby Ellin's writing is everything her fiancé pretended to be: witty, vulnerable, brave, smart, and honest.' - Michael Finkel, author of *The Stranger in the Woods* In *Duped*, New York Times journalist Abby Ellin explores the secret lives of compulsive liars, and the tragedy of those who trust them. Perfect for anybody who enjoyed *Bad Blood* and *Dirty John*. While leading a double life sounds like the stomping ground of psychopaths, moles, and covert agents with indeterminate dialects, plenty of people who appear 'normal' keep canyon-sized secrets from those in their immediate orbits. These untold stories lead to enormous surprises, often unpleasant ones. *Duped* is an investigation of compulsive liars - and how they fool their loved ones - drawing on Abby Ellin's personal experience. From the day Abby went on her first date with The Commander, she was caught up in a whirlwind. Within five months he'd proposed, and they'd moved in together. But there were red flags: strange stories of international espionage, involving Osama bin Laden and the Pentagon. Soon his stories began to unravel until she discovered, far later than she'd have liked, that he was a complete and utter fraud. When Ellin wrote about her experience in *Psychology Today*, the responses were unlike anything she'd experienced as a journalist. Legions of people wrote in with similar stories, of otherwise sharp-witted and self-aware people being taken in by ludicrous scams. Why was it so hard to spot these outlandish stories? Why were so many of the perpetrators male, and so many of the victims female? Was there something universal at play here? In *Duped*, New York Times journalist Abby Ellin explores the secret lives of compulsive liars, and the tragedy of those who trust them - who have experienced severe, prolonged betrayal - and the terrible impact on their sense of reality and their ability to trust ever again. Studying the art and science of lying, talking to victims who've had their worlds turned upside down, and writing with great openness about her own mistakes, she lays the phenomenon bare. Ellin offers us a shocking and intimate look not only at the damage that

the duplicitous cause, but the painful reaction of a society that is all too quick to blame the believer.

The Routledge Handbook of International Criminology brings together the latest thinking and findings from a diverse group of both senior and promising young scholars from around the globe. This collaborative project articulates a new way of thinking about criminology that extends existing perspectives in understanding crime and social control across borders, jurisdictions, and cultures, and facilitates the development of an overarching framework that is truly international. The book is divided into three parts, in which three distinct yet overlapping types of crime are analyzed: international crime, transnational crime, and national crime. Each of these perspectives is then articulated through a number of chapters which cover theory and methods, international and transnational crime analyses, and case studies of criminology and criminal justice in relevant nations. In addition, questions placed at the end of each chapter encourage greater reflection on the issues raised, and will encourage young scholars to move the field of inquiry forward. This handbook is an excellent reference tool for undergraduate and graduate students with particular interests in research methods, international criminology, and making comparisons across countries.

This book is about cybercriminal networks that make use of digital means. The author analyzes the processes of origin and growth and criminal capabilities, and puts forward several explanations for the differences found between traditional criminal networks and cybercriminal networks. Some networks make full use of the advantages that digitization provides. Forums provide a fluid form of cooperation, making dependency relationships seen in traditional criminal networks less important. Furthermore, examples were found of prolonged, repeated interaction through online communities, which raises the question to what extent digital social ties differ from their real-world counterparts. This study forms an important evidence-based contribution to the criminological knowledge about cybercriminal networks. Based on the empirical results, the author outlines possibilities for situational crime prevention against cybercriminal networks. This book will therefore be of interest both to academics and practitioners in the field of cybercrime and cyber security.

Fraud, like other crime, can best be explained by three factors: a supply of motivated offenders, the availability of suitable targets and the absence of capable guardians-control systems or someone "to mind the store", so to speak (Cohen & Felson 1979). In this, the first of two papers, the authors focus on motivation and other psychological aspects of fraud. They identify a number of psychological correlates of fraud offending, but note that these are by no means unique to fraud, and do not necessarily differentiate fraudsters from law-abiding citizens. The other two factors, opportunities and guardianship, provide more scope for fraud control and are addressed in a companion paper on "red flags", or situational indicia, of fraud risk.
