 Subtitled "The Work of Michael Jackson," this book spans the career of one of software engineering's most important figures. Half the chapters are an anthology of Jackson's past writings, exemplifying the clarity, wisdom, and wit for which he is so well known. The other half of the book is new: Jackson and his colleagues give their latest views on requirements, specifications, design, problem frames, and programming methods. Although many people have observed that software development should be more of an engineering discipline, few have drawn from the wider engineering literature more deeply or usefully than Jackson. Because of his work, many software engineers have a better perspective on their software and the real world it is intended to serve.

What can practice management systems software do for a law practice? With the right system in place, a law firm and staff will have the ability to automatically route items, tasks, documents, and events to certain people based on their role in the case or matter, as well as manage deadlines, improve responsiveness to clients, reduce malpractice insurance rates, and boost overall productivity. The challenge is to find a program that best serves the needs of the firm.

Learn how to: § Select the best ERP software for your organization § Choose the most effective wrap around software to enhance the performance of an existing ERP system § Align software selection with business goals and objectives § Budget for the software and the hidden costs involved in its implementation At times a daring, maddening, and even frightening process, finding and implementing a suitable software package is never an easy task. The cost of the software package is often a fraction of the overall expense. Unless carefully selected, a major software package implementation can consume a considerable amount of your organization's time and energy. An ill-informed purchase can cost your organization it's customers, dollars, and reputation. Maximizing Business Performance through Software Packages: Best Practices for Justification, Selection, and Implementation explores the business challenges involved in justifying, selecting, and implementing software packages. It contains practical advice and insights on how to select "good fitting" software packages, how to justify them in terms of their ability to enable business process change or improvement, and most importantly, how to implement them successfully. Selecting and implementing enterprise architecture technology software solutions involves a large expenditure across all the resources of an organization. The process has become increasingly complex as business functions have become increasingly integrated. Maximizing Business

Portals present unique strategic challenges in the academic environment. Their conceptualization and design requires the input of campus constituents who seldom interact and whose interests are often opposite. The implementation of a portal requires a

coordination of applications and databases controlled by different campus units at a level that may never before have been attempted at the institution. Building a portal is as much about constructing intra-campus bridges as it is about user interfaces and content. Designing Portals: Opportunities and Challenges discusses the current status of portals in higher education by providing insight into the role portals play in an institution's business and educational strategy, by taking the reader through the processes of conceptualization, design, and implementation of the portals (in different stages of development) at major universities and by offering insight from three producers of portal software systems in use at institutions of higher learning and elsewhere.
