*Men Are from Mars, Women Are from Venus* Tor Books  
Winner of the Pulitzer Prize "A must-read, cannot-put-down history." — Thomas Friedman, New York Times Arguably the most important American lawyer of the twentieth century, Thurgood Marshall was on the verge of bringing the landmark suit *Brown v. Board of Education* before the U.S. Supreme Court when he became embroiled in a case that threatened to change the course of the civil rights movement and cost him his life. In 1949, Florida's orange industry was booming, and citrus barons got rich

on the backs of cheap Jim Crow labor with the help of Sheriff Willis V. McCall, who ruled Lake County with murderous resolve. When a white seventeen-year-old girl cried rape, McCall pursued four young black men who dared envision a future for themselves beyond the groves. The Ku Klux Klan joined the hunt, hell-bent on lynching the men who came to be known as "the Groveland Boys." Associates thought it was suicidal for Marshall to wade into the "Florida Terror," but the young lawyer would not shrink from the fight despite continuous death threats against him. Drawing on a wealth of never-before-published material, including the FBI's unredacted Groveland case files, as well as unprecedented access to the NAACP's Legal Defense Fund files, Gilbert King shines new light on this remarkable civil rights crusader.

*Liver Pathophysiology: Therapies and Antioxidants* is a complete

volume on morphology, physiology, biochemistry, molecular biology and treatment of liver diseases. It uses an integral approach towards the role of free radicals in the pathogenesis of hepatic injury, and how their deleterious effects may be abrogated by the use of antioxidants. Written by the most prominent authors in the field, this book will be of use to basic and clinical scientists and clinicians working in the biological sciences, especially those dedicated to the study and treatment of liver pathologies. Presents the most recent advances in hepatology, with a special focus on the role of oxidative stress in liver injury. Provides in vivo and in vitro models to study human liver pathology. Explains the beneficial effects of antioxidants on liver diseases. Contains the most recent and modern treatments of hepatic pathologies, including, but not limited to, stem cells repopulation, gene therapy and liver transplantation.

The Report on Unidentified Flying Objects is a book by Edward J. Ruppelt which described the study of UFOs by United States Air Force from 1947 to 1955. Ruppelt was a United States Air Force officer best known for his involvement in Project Blue Book, a formal governmental study of unidentified flying objects. He is generally credited with coining the term "unidentified flying object." Because Ruppelt was the central axis of the government's investigation the book provides a unique insider look at how the government's efforts functioned.

The Wheel of Time ® is a PBS Great American Read Selection! Now in development for TV! Since its debut in 1990, The Wheel of

Time® by Robert Jordan has captivated millions of readers around the globe with its scope, originality, and compelling characters. In Towers of Midnight, the Last Battle has started. The seals on the Dark One's prison are crumbling. The Pattern itself is unraveling, and the armies of the Shadow have begun to boil out of the Blight. The sun has begun to set upon the Third Age. Perrin Aybara is now hunted by specters from his past: Whitecloaks, a slayer of wolves, and the responsibilities of leadership. All the while, an unseen foe is slowly pulling a noose tight around his neck. To prevail, he must seek answers in Tel'aran'rhiod and find a way--at long last--to master the wolf within him or lose himself to it forever. Meanwhile, Matrim Cauthon prepares for the most difficult challenge of his life. The creatures beyond the stone gateways--the Aelfinn and the Eelfinn--have confused him, taunted him, and left him hanged, his memory stuffed with bits and pieces of other men's lives. He had hoped that his last confrontation with them would be the end of it, but the Wheel weaves as the Wheel wills. The time is coming when he will again have to dance with the Snakes and the Foxes, playing a game that cannot be won. The Tower of Ghenjei awaits, and its secrets will reveal the fate of a friend long lost. Dovie'andi se tovyu sagain. It's time to toss the dice. TV series update: "Sony will produce along with Red Eagle Entertainment and Radar Pictures. Rafe Judkins is attached to write and executive produce. Judkins previously worked on shows such as ABC's "Agents of SHIELD," the Netflix series "Hemlock Grove," and the NBC series "Chuck." Red Eagle partners Rick Selvage and Larry Mondragon will executive produce along with Radar's Ted Field and Mike Weber. Darren Lemke will also executive produce, with Jordan's widow

This book is dedicated to studying the thermodynamic bases of the structure-function relationship of proteins. It moves from the elementary principles of physical chemistry to the most current topics of biochemistry, including those that may be subject to some controversy. It considers thermodynamic properties related to the stability and function of proteins from the point of view of physics in a language that, without sacrificing conceptual rigor, is easy to read. Detailing the thermodynamics of protein-ligand interactions, protein denaturation, allostery, oxidative phosphorylation and protein phosphorylation, the book will be of interest to students and teachers of chemistry, physics, biochemistry and biotechnology.

Popular marriage counselor and seminar leader John Gray provides a unique, practical and proven way for men and women to communicate and relate better by acknowledging the differences between them. Once upon a time Martians and Venusians met, fell in love, and had happy relationships together because they respected and accepted their differences. Then they came to earth and amnesia set in: they forgot they were from different planets. Using this metaphor to illustrate the commonly occurring conflicts between men and women, Gray explains how these differences can come between the sexes and prohibit mutually fulfilling loving relationships. Based on years of successful counseling of couples, he gives advice on how to counteract these differences in communication styles, emotional needs and modes of behavior to promote a greater understanding between individual partners. Gray shows how men and women react differently in conversation and how their relationships are affected by male intimacy cycles ("get close", "back off"), and female self-esteem fluctuations ("I'm okay", "I'm not okay"). He encourages readers to accept the other gender's particular way of expressing love, and helps men and women learn how to fulfill each other's emotional needs. With practical suggestions on how to reduce conflict, crucial information on how to interpret a partner's behavior and methods for preventing emotional "trash from the past" from invading new relationships, *Men Are from Mars, Women Are from Venus* is a valuable tool for couples who want to develop deeper and more satisfying relationships with their partners.

The second edition of this successful book highlights the

widespread use of enzymes in food processing improvement and innovation, explaining how they bring advantages. The properties of different enzymes are linked to the physical and biochemical events that they influence in food materials and products, while these in turn are related to the key organoleptic, sensory and shelf life qualities of foods. Fully updated to reflect advances made in the field over recent years, the book also contains five new chapters.

**Liver Pathophysiology** Dietary fibre technology is a sophisticated component of the food industry. This highly practical book presents the state-of-the-art and explains how the background science translates into commercial reality. An international team of experts has been assembled to offer both a global perspective and the nuts and bolts information relevant to those working in the commercial world. Coverage includes specific dietary fibre components (with overviews of chemistry, analysis and regulatory aspects of all key dietary fibres); measurement of dietary fibre and dietary fibre components (in-vitro and in-vivo); general aspects (eg chemical and physical nature; rheology and functionality; nutrition and health; and technological) and current hot topics. Ideal as an up-to-date overview of the field for food technologists; nutritionists and quality assurance and production managers.

Totally revised and expanded, the Color Atlas of Biochemistry presents the fundamentals of human and mammalian biochemistry on 215 stunning color plates. Alongside a short introduction to chemistry and the classical topics of biochemistry, the 2nd edition covers new approaches and aspects in biochemistry, such as links between chemical structure and biological function or pathways for information transfer, as well as recent developments and discoveries, such as the structures of many new important molecules. Key features of this title include:- The unique combination of highly effective color graphics and comprehensive figure legends;- Unified color-coding of atoms, coenzymes, chemical classes, and cell organelles that allows quick recognition of all involved systems;- Computer graphics provide simulated 3D representation of many important molecules. This Flexibook is ideal for students of medicine and biochemistry and a valuable source of reference for practitioners.

**Report: On General Laws Relative To Combinations Commonly Known As Trusts, 1888-89;** Pragati Books Pvt. Ltd.

Plant secondary metabolites have been a fertile area of chemical investigation for many years, driving the development of both analytical chemistry and of new synthetic reactions and methodologies. The subject is multi-disciplinary with chemists, biochemists and plant scientists all contributing to our current understanding. In recent years there has been an upsurge in interest from other disciplines, related to the realisation that secondary metabolites are dietary components that may have a considerable impact on human health, and to the development of gene technology that permits modulation of the contents of desirable and undesirable components. Plant Secondary

Metabolites: Occurrence, Structure and Role in the Human Diet addresses this wider interest by covering the main groups of natural products from a chemical and biosynthetic perspective with illustrations of how genetic engineering can be applied to manipulate levels of secondary metabolites of economic value as well as those of potential importance in diet and health. These descriptive chapters are augmented by chapters showing where these products are found in the diet, how they are metabolised and reviewing the evidence for their beneficial bioactivity.

NATIONAL BESTSELLER • An audacious, darkly glittering novel set in the eerie days of civilization's collapse—the spellbinding story of a Hollywood star, his would-be savior, and a nomadic group of actors roaming the scattered outposts of the Great Lakes region, risking everything for art and humanity. Now an original series on HBO Max. Over one million copies sold! Kirsten Raymonde will never forget the night Arthur Leander, the famous Hollywood actor, had a heart attack on stage during a production of *King Lear*. That was the night when a devastating flu pandemic arrived in the city, and within weeks, civilization as we know it came to an end. Twenty years later, Kirsten moves between the settlements of the altered world with a small troupe of actors and musicians. They call themselves The Traveling Symphony, and they have dedicated themselves to keeping the remnants of art and humanity alive. But when they arrive in St. Deborah by the Water, they encounter a violent prophet who will threaten the tiny band's existence. And as the story takes off, moving back and forth in time, and vividly depicting life before and after the pandemic, the strange twist of fate that connects them all will be

revealed. Look for Emily St. John Mandel's new novel, *Sea of Tranquility*, coming soon!

Why we need to stop wasting public funds on education Despite being immensely popular—and immensely lucrative—education is grossly overrated. Now with a new afterword by Bryan Caplan, this explosive book argues that the primary function of education

is not to enhance students' skills but to signal the qualities of a good employee. Learn why students hunt for easy As only to forget most of what they learn after the final exam, why decades of growing access to education have not resulted in better jobs for average workers, how employers reward workers for costly schooling they rarely ever use, and why cutting education spending is the best remedy. Romantic notions about education being "good for the soul" must yield to careful research and common sense—*The Case against Education* points the way. Princeton University Press

*A Fine Balance*, Rohinton Mistry's stunning internationally acclaimed bestseller, is set in mid-1970s India. It tells the story of four unlikely people whose lives come together during a time of political turmoil soon after the government declares a "State of Internal Emergency." Through days of bleakness and hope, their circumstances – and their fates – become inextricably linked in ways no one could have foreseen. Mistry's prose is alive with enduring images and a cast of unforgettable characters. Written with compassion, humour, and insight, *A Fine Balance* is a vivid, richly textured, and powerful novel written by one of the most gifted writers of our time.

*Free Radicals in Biology and Medicine* has become a classic text in the field of free radical and antioxidant research. Now in its fifth edition, the book has been comprehensively rewritten and updated whilst maintaining the clarity of its predecessors. Two new chapters discuss 'in vivo' and 'dietary' antioxidants, the first emphasising the role of peroxiredoxins and integrated defence mechanisms which allow useful roles for ROS, and the second

containing new information on the role of fruits, vegetables, and vitamins in health and disease. This new edition also contains expanded coverage of the mechanisms of oxidative damage to lipids, DNA, and proteins (and the repair of such damage), and the roles played by reactive species in signal transduction, cell survival, death, human reproduction, defence mechanisms of animals and plants against pathogens, and other important biological events. The methodologies available to measure reactive species and oxidative damage (and their potential pitfalls) have been fully updated, as have the topics of phagocyte ROS production, NADPH oxidase enzymes, and toxicology. There is a detailed and critical evaluation of the role of free radicals and other reactive species in human diseases, especially cancer, cardiovascular, chronic inflammatory and neurodegenerative diseases. New aspects of ageing are discussed in the context of the free radical theory of ageing. This book is recommended as a comprehensive introduction to the field for students, educators,

clinicians, and researchers. It will also be an invaluable companion to all those interested in the role of free radicals in the life and biomedical sciences.

Superfoods and functional foods are receiving increasing attention because of their important roles in health. This book focuses on the production of superfoods and functional foods and their role as medicine. In the early chapters, prominent researchers introduce the roles and production of microalgae and functional fruits through metabolic engineering, the use of food waste, and effective cooking procedures. In the latter chapters, other prominent researchers introduce the medical effects of polyphenols, glutamine, and unsaturated fatty acids, which are contained in superfoods and functional foods. They suggest the importance of superfoods and functional foods in the treatment and prevention of many diseases. It is also recommended for readers to take a look at a related book, *Superfood and Functional Food: An Overview of Their Processing and Utilization*.
