Legare Street Press

Excerpt from A Text-Book of Pathological Anatomy and Pathogenesis I have first of all, at Professor Ziegler's request, to say something with regard to the German original of the text-book now offered to English students. His first design was to bring out a new and revised edition of

Foerster's well-known manual of Pathological Anatomy. But as the revision went on, it became clear that the present state of our knowledge of Pathology could not be fitly represented without recasting and almost rewriting the whole work. It was therefore thought better that he should undertake an entirely new text-book, in which the subject should throughout be treated from a modern point of view. The great success of the first edition in Germany would seem to show that such a book was needed, and that the author's manner of treating the subject was approved by teachers of Pathology. Professor Ziegler explains that a great part of his text is based upon

observations made or verified by himself. Where he has drawn upon other sources he has carefully cited the needful authorities. "I am not blind to the fact," he adds, "that my statements and criticisms may bear too strongly the mark of my own personal views, and that these views may not be readily accepted by all pathologists. But I have nevertheless held it wiser not to introduce much matter of controversy into the text of a treatise intended mainly for students. Excerpt from A Handbook of Pathological Anatomy and Histology: With an Introductory Section on Post-Mortem Examinations and the Methods of Preserving and Examining Diseased

Tissues In the third edition of this work, the same objects have been kept in view as in the second edition. It is intended that the student and the practitioner shall find in it the information which they need to enable them to perform autopsies, to preserve the tissues, to prepare them properly, and to examine them with the microscope. The work, therefore, comprises instruction in the methods of making post-mortem examinations, of preserving diseased tissues, of preparing them for microscopical examination, and of cultivating and examining bacteria. It also gives an account of the lesions of the different parts of the body, of the general diseases, of violent deaths, and of poisoning; of the changes produced by inflammation and degeneration; and

of the structure of tumors. All the drawings have been made by the authors. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books.  Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.
