**Four Views on Creation, Evolution,
and Intelligent Design** Zondervan
What are we missing when we look at

the creation narratives of Genesis only or primarily through the lens of modern discourse about science and religion? Theologian Peter Bouteneff explores how first-millennium Christian understandings of creation can inform current thought in the church and in the public square. He reaches back into the earliest centuries of our era to recover the meanings that early Jewish and

Christian writers found in the stories of the six days of creation and of Adam and Eve in the Garden of Eden. Readers will find that their forbears in the faith saw in the Genesis narrative not simply an account of origins but also a rich teaching about the righteousness of God, the saving mission of Christ, and the destiny of the human creature.

Creation and the Patriarchal Histories Monarch Books

In *Blind Evolution?: The Nature of Humanity and the Origin of Life*, Professor David Frost challenges the dominant worldview derived from Darwin's evolutionary theories and perpetuated in Richard Dawkins's atheistic propaganda for Neo-Darwinism: that our universe has 'at bottom, no design, no purpose, no evil and no good,

nothing but blind, pitiless indifference'. Frost deploys recent findings from a range of scientific studies that shake Neo-Darwinism to its foundation. Citing entertaining examples, from the inner workings of a single cell to the animal kingdom at large, from elephants and giraffes to the Japanese pufferfish, Frost maintains that Darwinian premises are wholly inadequate to engage with life or to provide a framework for our experiences of joy and sorrow, the problem of suffering, and the stark realities of good and evil. Reflecting on the nature of existence, Frost points to a mode of human understanding parallel to scientific enquiry through the path of 'vision' accessed via the nous (or spiritual intellect). He argues that 'vision' is as much essential to our

understanding of creation as is scientific enquiry - reality is best approached through a complementary partnership of both.

Cosmology, Geology, and Biology in Christian Perspective Wm. B. Eerdmans Publishing

‘In this compelling and thoroughly researched book, Benjamin Huskinson demonstrates that just as there is broad diversity within evangelicalism, so too there is broad diversity among “creationists.” His work on the Intelligent Design movement is superb, and he prompts me to rethink my long held conviction that Intelligent Design is merely the most recent evolutionary form of creationism. This is a very fine book.’ —Randall Balmer, Author of *Evangelicalism in America* and writer-

host of “In the Beginning”: The Creationist Controversy ‘Benjamin Huskinson's study of American creationism will be an eye-opener for those who sit on the opposite side of the evolution debate. He shows that far from being a unified assault on Darwinism, the campaign was actually a sequence of separate movements launched by rival evangelical groups competing for influence within their own community.’ —Peter Bowler, Author of *Monkey Trials and Gorilla Sermons: Evolution and Christianity from Darwin to Intelligent Design* ‘A thoughtful and careful analysis that throws as much light on the diversity of American evangelicalism as it does on Christian attitudes to evolutionary theory. Huskinson offers a smart analysis of religious anti-evolution

movements which neither demonises nor ridicules but seeks to understand the tenets and beliefs of a movement far more complex and multivalent than most of us appreciate. A must-read for science communicators.’ —Philippa Levine, Walter Prescott Webb Chair in History and Ideas, University of Texas at Austin, USA This book explores the cultural history of anti-evolution efforts in the United States from 1960 to the present, refuting several popular narratives about creation science in evangelical America. Separating theological terms like “creationism” from cultural movements such as “creation science” and “intelligent design” in an evangelical marketplace of ideas, it contests assumptions that evangelical movements against evolution are

homogeneous, and it argues that intelligent design is not an off-shoot of the creation-science movement. It demonstrates that the rationale of creationist groups is relational as well as ideological, showing that the social function of American creationism, which is to establish the boundaries of 'orthodox' religion, is key to understanding the competing strategies of creation-science organisations.

Faith and Fossils ISD LLC

Subtitle: Orthodox Christian Reflections on the Book of Genesis The Book of Genesis is foundational reading for the Christian, concerned as it is with the origins of our race and the beginnings of salvation history. Its opening pages provide the theological suppositions of the entire biblical story: Creation,

especially that of man in God's image, the structure of time, man's relationship to God, the entrance of sin into the world, and God's selection of a specific line of revelation that will give structure to history. Early Christian writers such as St. Paul saw no dichotomy between the writings of the Law, of which Genesis is the beginning, and the Gospel. Rather, the Gospel is the key to understanding the Law. In "Creation and the Patriarchal Histories," Fr. Reardon shows clearly how the proper understanding of Creation and the Fall informs all of Christian doctrine, and how the narratives of the patriarchs from Noah to Joseph pave the way for the salvation history that continues in Exodus.

Reflections on Science and Religion
Zondervan

From five authors with over two decades of experience teaching origins together in the classroom, this is the first textbook to offer a full-fledged discussion of the scientific narrative of origins from the Big Bang through humankind, from biblical and theological perspectives. This work gives the reader a detailed picture of mainstream scientific theories of origins along with how they fit into the story of God's creative and redemptive action.

An Anthology of Writings from the Church Fathers on Creation and Design
St. Xenia Skete Press

Originally published in 1995, Creation-Evolution Debates is the second volume in the series, Creationism in Twentieth Century America, reissued in 2021. The volume comprises eight debates from

the early 1920s and 1930s between prominent evolutionists and creationists of the time. The original sources detail debates that took place either orally or in print, as well as active debates between creationists over the true meaning of Genesis I. The essays in this volume feature prominent discussions between the likes of Edwin Grant Conklin, Henry Fairfield Osbourne and William Jennings Bryan, John Roach Francis and Charles Francis Potter, George McCready Price and Joseph McCabe and William Bell Riley versus Charles Smith, amongst many others. The collection will be of especial interest to natural historians, and theologians as well as academics of philosophy, and history.

Orthodox Christian Reflections on

the Book of Genesis Wipf and Stock Publishers

It seems that the wish to benefit all, and to lavish indiscriminately upon the first comer one's own gifts, was not a thing altogether commendable, or even free from reproach in the eyes of the many; seeing that the gratuitous waste of many prepared drugs on the incurably-diseased produces no result worth caring about, either in the way of gain to the recipient, or reputation to the would-be benefactor. Rather such an attempt becomes in many cases the occasion of a change for the worse. The hopelessly-diseased and now dying patient receives only a speedier end from the more active medicines; the fierce unreasonable temper is only made worse by the kindness of the lavished

pearls, as the Gospel tells us. I think it best, therefore, in accordance with the Divine command, for any one to separate the valuable from the worthless when either have to be given away, and to avoid the pain which a generous giver must receive from one who treads upon his pearl,' and insults him by his utter want of feeling for its beauty.

Against Hermogenes Regent College Publishing

According to the authors of this book, who explore evolutionary theory from a clear Christian perspective, the common view of conflict between evolutionary theory and Christian faith is mistaken. Written by contributors representing the natural sciences, philosophy, theology, and the history of science, this thought-provoking work is informed by both solid

scientific knowledge and keen theological insight. The three sections of the book address (1) relevant biblical, historical, and scientific background, (2) the scientific evidence for an evolving creation, and (3) theological issues commonly raised in connection with evolution, including the nature of God's creative activity, the meaning of the miraculous, and the uniqueness of humankind. Woven through the volume are short meditations designed to direct readers toward worshiping the God of providence. Contributors: Laurie J. Braaten Warren S. Brown Jr. David Campbell Robin Collins Edward B. Davis Terry M. Gray Jeffrey K. Greenberg Deborah B. Haarsma Loren Haarsma James P. Hurd Conrad Hyers David N. Livingstone Keith B. Miller John C.

**The Nature of Humanity and the
Origin of Life** St Herman Press

What if the biblical creation account is true, with the origins of Adam and Eve taking place alongside evolution?

Building on well-established but overlooked science, S. Joshua

Swamidass explains how it's possible for Adam and Eve to be rightly identified as the ancestors of everyone, opening up new possibilities for understanding Adam and Eve consistent both with current scientific consensus and with traditional readings of Scripture.

*A Scientific, Philosophical, and
Theological Critique* Baker Academic

The author of *The Phenomenon of Man*

reconciles passionate faith with the rigor of scientific thinking. With his unique background as a geologist, paleontologist, and Jesuit priest, Pierre Teilhard de Chardin was a powerful exponent of the view that scientific theories could comfortably coexist with religious faith. To this day, his ideas provoke passionate debates in communities that view science and faith as necessarily separate ideologies. In this collection of nineteen essays, Teilhard seeks to illuminate a middle ground between science and religion that he felt both disciplines could accept. He explores the Fall and original sin, the possibility of life on other planets, and the role that God may have played in the process of human evolution, successfully challenging contemporary theologians to

rethink their views of the universe and its creation. "Like other great visionary poets—Blake, Hopkins, Yeats—Teilhard engages the reader both intellectually and sensually." —The Washington Post Book World "An excellent blend of theological speculation with practical or ascetical application." —Catholic Telegraph

On the Making of Man Discovery Inst
"Genesis, creation, and early man has been compiled posthumously from a rich array of materials left behind by Fr. Seraphim. The second edition contains much new material to supplement Fr. Seraphim's work, including an updated preface outlining new developments in the creation/evolution debate, such as the rise of the intelligent design movement in the West and the defense

of the Orthodox Patristic teaching on creation by theological writers and scientists in Russia; new explanatory notes on many topics pertaining to Genesis and creation, with further quotations from the Holy Fathers and extensive references to Patristic works; an article detailing the Scriptural-Patristic teaching on the incorruption of man and the cosmos before the fall, and showing its relevance to other aspects of Orthodox theology; and critiques of the modern philosophy of evolution by saints and holy elders, as well as by Orthodox scientists working in the fields of biology and geology." from publisher website.

Faith and Evolution Routledge
Evolution Is Not the Bible's Enemy Saving Darwin explores the history of the controversy that swirls around

evolution science, from Darwin to current challenges, and shows why—and how—it is possible to believe in God and evolution at the same time.

God and Evolution God and Evolution Proceedings of a dialogue held in the fall of 2009 at the Internationales Wissenschaftsforum, University of Heidelberg.

The Patristic Understanding of Creation
Baker Books

Berry describes why so many Christians have difficulty believing in the theory of evolution. (Christian Living)

A Grace-Filled Naturalism Monarch Books
The debate surrounding creation and evolution divides Christians, particularly evangelicals. It has been a stumbling block for young Christians and a point of contention for the new Atheists.

Professor R. J Berry assembles a wide range of distinguished contributors, all convinced, committed and orthodox Christian believers, each of whom has undertaken a conceptual journey, based on sound science and careful theology, from a creationist position to one in which God's creation and the processes of evolution are properly and credibly integrated. *Christians and Evolution* is a luminous volume that offers a pathway for doubters, sceptics and conservative Christians to embrace the overall scientific consensus of the evolutionary approach, while holding solidly and without reservation to the doctrines of God's creation and God's omnipotence. This text is a must-read for anyone interested in the creation v evolution debate.

**The Singing Heart of the World:
Creation, Evolution, and Faith** Harper
Collins

Four Views on Creation, Evolution, and Intelligent Design presents the current "state of the conversation" about origins among evangelicals representing four key positions: Young Earth Creationism - Ken Ham (Answers in Genesis) Old Earth (Progressive) Creationism - Hugh Ross (Reasons to Believe) Evolutionary Creation - Deborah B. Haarsma (BioLogos) Intelligent Design - Stephen C. Meyer (The Discovery Institute) The contributors offer their best defense of their position addressing questions such as: What is your position on origins - understood broadly to include the physical universe, life, and human beings in particular? What do you take to

be the most persuasive arguments in defense of your position? How do you demarcate and correlate evidence about origins from current science and from divine revelation? What hinges on answering these questions correctly?

**The Spirit in Creation and New
Creation** Wipf and Stock Publishers

"This is the book of the generation of heaven and earth ,” saith the Scripture, when all that is seen was finished, and each of the things that are betook itself to its own separate place, when the body of heaven compassed all things round, and those bodies which are heavy and of downward tendency, the earth and the water, holding each other in, took the middle place of the universe; while, as a sort of bond and stability for the things that were made, the Divine power and

skill was implanted in the growth of things, guiding all things with the reins of a double operation (for it was by rest and motion that it devised the genesis of the things that were not, and the continuance of the things that are), driving around, about the heavy and changeless element contributed by the creation that does not move, as about some fixed path, the exceedingly rapid motion of the sphere, like a wheel, and preserving the indissolubility of both by their mutual action, as the circling substance by its rapid motion compresses the compact body of the earth round about, while that which is firm and unyielding, by reason of its unchanging fixedness, continually augments the whirling motion of those things which revolve round it, and

intensity is produced in equal measure in each of the natures which thus differ in their operation, in the stationary nature, I mean, and in the mobile revolution; for neither is the earth shifted from its own base, nor does the heaven ever relax in its vehemence, or slacken its motion.

A Journey Through the Orthodox Divine Liturgy InterVarsity Press

The Patristic Understanding of Creation encapsulates what the Church Fathers had to say, in their own words, on the topic of creation. Going back to Roman and Byzantine times, the writings of the Church Fathers are basic to Christian theology and provide a benchmark for how Christians have traditionally understood creation. This understanding of creation, however, faces tremendous challenges in our day, especially in

discussions at the intersection of science and religion. Process theology and other efforts to reconceptualize creation have explicitly opposed key elements of the Christian doctrine of creation: creation ex nihilo, the transcendence and immanence of God in creation, "the absolute creatureliness and non-self-sufficiency of the world" (to use a phrase of Fr. Georges Florovsky), the goodness of creation, and the openness of the world to divine action. All of these the Church Fathers not only held but also ably defended. This anthology is therefore not merely of academic or historical interest. In reasserting a theologically sound understanding of creation, this anthology fills a need that is both practical and urgent.

What the Bible Does and Doesn't Say

about Human Origins Aeterna Press

Is there only one orthodox Christian perspective on creation-evolution? The authors explore the underlying issues a person needs to understand in order to from convictions regarding origins. Some of these issues are rooted in philosophy, some in the natural sciences, and some in biblical studies--all of which are explored.

Science and Theology in Western and Orthodox Realms Aeterna Press

To some Western evangelicals, the practices of Eastern Orthodoxy seem mysterious and perhaps even unbiblical. Then again, from an Orthodox perspective, evangelicals lack the spiritual roots provided by centuries-old church traditions. Are the differences between these two branches of

Christianity so sharp that to shake hands is to compromise the gospel itself? Or is there room for agreement? Are Eastern Orthodoxy and evangelicalism at all compatible? Yes, no, maybe—this book allows five leading authorities to present their different views, have them critiqued by their fellow authors, and respond to the critiques. Writing from an Orthodox perspective with a strong appreciation for evangelicalism, Bradley Nassif makes a case for compatibility. Michael Horton and Vladimir Berzonsky take the opposite stance from their respective evangelical and Orthodox backgrounds. And George Hancock-Stefan (evangelical) and Edward

Rommen (Orthodox) each offer a qualified “perhaps.” The interactive Counterpoints forum is ideal for comparing and contrasting the different positions to understand the strengths and weaknesses of these two important branches of Christianity and to form a personal conclusion regarding their compatibility. The Counterpoints series provides a forum for comparison and critique of different views on issues important to Christians. Counterpoints books address two categories: Church Life and Bible and Theology. Complete your library with other books in the Counterpoints series.
