This 26-session Bible overview—designed to equip lay leaders to serve as elders, Sunday school teachers, small group facilitators, and in other positions of service in the church—can be completed as a group study or a self-study. Both volumes have revised graphics and have been updated to reflect the best understanding of the Bible and educational methodology. The church depends on volunteer workers to staff educational ministries. Sunday school teachers and small group leaders may have a heart to teach the Bible, but how have they been academically prepared? Over the course of a century, Training for Service has equipped over one million volunteers with this basic course and certification for Bible teaching. This new revision retains all the features listed above and also gives access to www.trainingforservice.com, which: * Gives the leader access to every reproducible included in the Leader Guide in a larger format. * Allows the leader to create a full-color, fully personalized completion certificate for each graduate. * Posts names of every graduate of the course submitted by the leader month by month. * And contains many more helpful features!

This User's Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User's Guide was created by researchers affiliated with AHRQ's Effective Health Care Program, particularly those who participated in AHRQ's DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
