Cardiovascular Pathophysiology Abstract. Atherosclerosis is the major cause of cardiovascular disease. Hypercholesterolaemia, hypertension and cigarette smoking are the common risk factors for

atherosclerosis. These risk factors unite behind a convergence of mechanism, involving oxidation and inflammation in the artery wall that, with time, gives rise to characteristic fatty-fibrous lesions. Pathophysiology and biochemistry of cardiovascular disease

Types of CVD

Coronary heart disease. Coronary heart disease occurs when the flow of oxygen-rich blood to the heart muscle is blocked... Strokes and TIAs. A stroke is where the blood supply to part of the brain is cut off, which can cause brain damage and... Peripheral arterial disease. Peripheral ...

Cardiovascular disease - NHS

In case that there is atherosclerotic plaque in coronary artery, the patient may experience symptoms of hypoperfusion of the heart muscle. These plaques can

narrow the coronary arteries and can cause symptoms such as chest pain (angina pectoris) or shortness of breath. Complete occlusion of coronary artery can cause myocardial infarction.³

Pathophysiology of the Cardiovascular System ...

The deep cardiac plexus is located on the bifurcation of the trachea, and the superficial cardiac plexus is located on the base of the heart below the arch of the aorta. The autonomic nervous system is made up of a two-neuron chain (using the presynaptic neuron and the postsynaptic neuron) from the central nervous system to the heart.

The Physiology of the Human Heart - dummies

Cardiovascular disease, any of the diseases, whether congenital or acquired, of the heart and blood vessels. Among the most important are

atherosclerosis, rheumatic heart disease, and vascular inflammation.

Cardiovascular diseases are a major cause of health problems and death.
