Financial Risk Forecasting The Theory
Financial Risk Forecasting is a complete introduction to practical quantitative risk management, with a focus on market risk. Derived from the author's teaching notes and years spent training practitioners in risk management techniques, it brings together the three key disciplines of finance, statistics and modeling (programming), to provide a thorough grounding in risk management techniques. Financial Risk Forecasting: The Theory and Practice of ... Risk management has become a relevant topic in corporate finance theory and in managerial practice. In recent years, corporate executives have progressively changed their focus from pure financial risk management to enterprise-wide risk management (Morgan Stanley, 2005; Nocco and Stulz, 2006) and have paid more attention to the links between enterprise risk, stock price performance, and ...
